THIRTY-SECOND ANNUAL CATALOGUE

STERLING SEEDS 1916

SEE PAGE 13 FOR DESCRIPTION AND PRICES OF THE TEN VARIETIES OF SPENCER SWEET PEAS ILLUSTRATED ON THIS COVER.

Hennepin Ave. at First Street
MINNEAPOLIS, MINNESOTA
Our Northern grown Timothy Seed is famous for its vigor, productiveness and reliability. It is specially selected, carefully cleaned and tested and must comply with definite standards of quality. See page 151.

THREE RELIABLE BRANDS

N. K. & Co.'s Northland Brand. The greatest value for a reasonable price. Of uniformly superior quality, and carefully selected for high purity and strong germination. The Northland Goose is on every bag.

N. K. & Co.'s Viking Brand. Lowest in price consistent with dependable quality. Strictly recleaned and tested for purity and germination. Every bag branded with the Viking ship.
Gentlemen: Please send the following seeds, etc.

</table>
Sterling Seeds for 1916.

General Information and Suggestions to Customers.

Garden and Flower Seeds. Unless otherwise noted, all Garden and Flower Seeds are sent prepaid by us except pound lots or more of Peas, Beans, and Sweet Corn. The last three items will be sent by parcel post if postages are added at parcel post rates named below. On Peas, Beans and Corn in larger quantities than quarter pounds mailed to Canada, add at the rate of 12c per pound to cover postage.

Grass and Field Seeds. All Grass and Field Seeds, Onion Sets and Potatoes are shipped only at purchaser's expense by express or freight, as ordered. Prices quoted in this catalogue are F. O. B. Minneapolis. Small quantities of Grass or Field Seeds sent by parcel post if postage is added at parcel post rates.

Parcel Post Rates. See Order Sheet For Zone Number.

Seed by Express or Freight. At prices quoted we deliver seeds to any Express or Railroad Depot in Minneapolis. On everything quoted by the ½ bu., ¼ bu., or 100 lbs., purchaser in every instance is to pay the transportation charges.

Important. When sending money to cover cost of postage allow for weight of box or packing material. For example, allow for two pounds' postage on one pound of Beans or other seed as the package when ready for mailing will weigh over one pound.

Plant Shipping Dates. In general, the following apply, but exact date may vary with the season. Trees, Shrubs, Vines and Roses are shipped by express or freight during April. Orders should reach us in March. Strawberry plants, April 25th to May 15th. Peonies, Iris, Phlox and other perennials—April and May. Celandine, Daffodils and Summer Flowering Bulbs, April 25 to July.

Geraniums, Cannas, Asters and other bedding plants May 15th to July 10th. In the locality of Minneapolis, Cannas and Geraniums should not be set out before Memorial Day. Vegetables, April 15th to June 1st. see page 100.

Our Responsibility. We consider that we are under no obligation to fill every order as promptly as possible. If we cannot fill your order for any item, we will at once return the money sent for same. We will not keep your money without adequate returns to you, send you due bill or substitute something you do not want.

As to our financial responsibility, we refer you to any bank or banker, or the commercial agencies in Minneapolis.

How to Send Money. Money can be sent safely either by P. O. order, bank draft, express draft, express order or registered letter. If your order amounts to $1.00 or more it is best to send by one of the above methods.

Disclaimer. As seeds, plants and bulbs are subject to climatic and other conditions over which we have no control, after once being placed in the ground, therefore, Northrup, King & Co., give no warranty, express or implied, as to description, quality, productivity or any other matter of any seeds, plants or bulbs they sell out and they will not be in any way responsible for the crop, and every order for articles named in this catalogue will be executed on these conditions only. If the purchaser does not accept same on these terms they are as once to be returned.

For Index of this Catalogue See Page 168.

NORTHRUP, KING & CO., SEEDSMEN, MINNEAPOLIS, MINNESOTA.
The offices illustrated above are equipped with the most modern devices for efficient service, including adding machines, comptometers, dictaphones, addressographs, folding machine, stamping and sealing machine, etc. With these devices we are able to serve you with the greatest economy and speed.

A trip through our warehouse would be of great interest to all who sow seeds. Permit us at this time to extend to you a special invitation to visit us and go over our plant. Here you can see our special facilities for cleaning Clover Seed and Alfalfa, for grading Seed Grains, handling Onion Sets, Seed Potatoes and Nursery Stock. We have recently installed additional up-to-date machinery for manufacturing Poultry Feed.

Many of our buildings are located on railroad trackage, enabling us to fill carload orders very quickly.

Our laboratory, illustrated on page 6, enables us to test carefully every lot of seed before it is sent out.

Under no conditions are seeds allowed to leave our warehouses which are not suitable in all respects for sowing. We see to it that the germination is up to standard and that the purity complies, not only with our requirements, but with the Seed Laws. To every bag of agricultural seed, we attach a tag on which is indicated both purity and germination which will be of interest and value to those who receive the seed.

Northrup, King & Co.'s seeds are the supreme result of modern methods of seed production.
View in Our Onion Set Warehouse Where the Sets Are Stored in Special Crates Until Ready for Spring Shipment.
We are Headquarters in The Northwest for Onion Sets.

A Glimpse at Some of Our Mills, with which We Clean Grass and Field Seeds. With Our up-to-date System it is possible to Unload a Car of Grain, Weigh it Carefully, Clean it Thoroughly and Reload in a very short Time.
Dealers' Seed Box Department.

In thousands of dealers' stores throughout the thirteen states tributary to Minneapolis are placed very handsome display boxes containing a full line of vegetable and flower seeds of the most popular varieties. We take special pride in the quality of seed we send out, in the liberal quantity placed in each package and the convenience with which our customers' wants may be supplied.

To properly and quickly handle an immense number of boxes requires modern and up-to-date equipment.

The view above shows a few of the carton filling and sealing machines. These are very ingenious devices which offer the best and most rapid means of carton filling.

The photo at the right shows a part of the roller system. This permits the boxes to be easily moved along while filled. The cases back of the girls contain packets of every variety. The proper number of each is placed in the boxes in regular rotation until each box is full.

This system is so complete that it permits several hundred boxes to be filled and shipped each day.
Dealers’ Seed Box Department.

The automatic packet filling machines illustrated above are part of a battery of ten which, when operated to full capacity, will fill over a quarter million packets per day. They are adjusted to place an exact quantity of seed in each packet, so any one will contain identically the same amount of seed as every other packet of the same variety. These fillers are operated by electric motors, and with them we put up many millions of packets annually. No packets are used again the second year, but each Fall all the boxes come back to us and the unsold packets are torn up. This insures dependable, high germinating seed in a bright, clean packet for every customer each season.

The illustration at the right shows a box set up on display in a dealer’s store. Note how easy it is for the purchasers to select just what they want. Does your merchant sell our seeds?
 TESTING SEEDS INDOORS
FOR PURITY AND GERMINATION.

Long before Pure Seed Laws were passed in the northwestern states, we had established a standard to which our Sterling Brand Seeds must conform. In 1897 we came to the conclusion that intelligent seed buyers would willingly pay the additional price which it is necessary to charge for strictly high grade seed. Our seed laboratory was then organized and we have enjoyed ever since the reputation for furnishing in our Sterling Brand the highest quality of seeds possible to obtain.

The illustration above shows a portion of our seed testing department. This is in charge of a graduate seed analyst who is fully competent to test all seeds both for purity and germination. With the aid of powerful magnifying glasses and delicate scales he is enabled to ascertain accurately, the purity of every lot of seed we handle. Each sample is carefully numbered and corresponds with the original lot in our warehouse. After the test is made, record is entered in our books and we are enabled at any time to trace the origin and ascertain the purity and germination of the seed sown on every order passing through our hands.

The germinators which we use, shown in the illustration below, are duplicates of those in the United States Department of Agriculture at Washington, D. C. and in many State Experiment Stations, and give us accurate tests. Several methods are followed. Some are placed in blotters, others in damp cloths, while still other samples, such as Blue Grass, must be germinated in bell jars, as indicated in the illustration at the right.

Our seed laboratory is an example of the painstaking care which is exercised throughout our business. Every order, large or small, is given careful attention in every detail. Every shipment of grass and field seeds which leaves our hands will be tagged showing purity and germination. Tags are attached to every bag whether the law requires it or not, so that you may know the record of the seed before it is placed in the ground.

Your confidence in Sterling Seeds will not be misplaced. It is worth much to know that the seeds you sow are capable of producing satisfactory results.
Northrup, King & Co.’s Seven Brands.

These seven brands illustrated herewith are trade-marks which have been adopted for the protection of our customers. They are not merely names and symbols but represent real standards of quality. You can rely on all these brands when you purchase seeds and poultry feed, as the reputation of Northrup, King & Co. is behind each one of them.

They are only used to brand seeds which have been carefully tested in our laboratory as explained on page 6.

To avoid sowing doubtful quality seed on your land and to receive real value for your money, it is always good judgment to purchase seeds of these brands.

"REG. U. S. PAT. OFF."

This set of abbreviated words indicates that the trade-mark in connection with which it is used, has been "Registered in the United States Patent Office," at Washington. Northland, Viking, Lincoln Oats, Giant Fodder and Elephant Fodder have all been registered in this way.

It is contrary to law for any firm or individual to use one of these trade-marks without our permission. Don’t be imposed upon. You can procure any of the above brands either from us direct or from dealers selling our seed, providing that our stock is not sold out.

Sterling Brand.

Our Sterling Bag Trade-Mark is used to brand those varieties of vegetable and flower seeds which we can especially recommend to our customers. A variety so marked will be found the best of its kind in every instance. We use this method to designate our specialties.

It is also used on grass and field seeds including Clover, Alfalfa, Timothy, Millets, Red Top, Blue Grass, Seed Grains, etc.

Sterling Brand Seeds are for those who want the best. Unexcelled for purity, germination, plumpness and color. Sold only in sealed bags. Look for the Sterling Trade-Mark.

Northrup, King & Co.’s Sterling Brand Seeds have proved by careful test superior in purity, germination, productiveness and hardness. They comply in every respect with the pure seed laws of all states. See pages 145, 146 and 151 for further information about this brand.

Northland Brand.

This is applied to many varieties of grass and field seeds, especially Clover, Timothy, Millets, Alfalfa, Blue Grass, Red Top and some Seed Grains. The name seems especially appropriate when one realizes that a large part of this seed is raised here, in the North, where plant life attains its greatest hardness and vigor.

Northland Brand Seeds are the greatest value for a reasonable price, of uniformly superior quality, carefully selected for high purity and strong germination. The Northland Goose is on every bag.

Viking Brand.

This is also a field and grass seed trade-mark and will be quoted on all our price lists and catalogues. See page 145 for the application of Viking to grass seed.

Viking Brand Seeds are lowest in price, consistent with dependable quality. Strictly recleaned and tested for purity and germination. Every bag branded with the Viking Ship.

Lincoln Oats.

This name has been used since 1893 and the tremendous demand for these oats which has developed since then, proves the great popularity of this brand. See page 120 for complete information in regard to Lincoln Brand Oats.

Giant Fodder Corn.

This name has been a standard one for years, but the illustration of the cow’s head is now being used for the first time.

Giant Fodder is recommended as the leading Southern Fodder variety. It excels all others in yield per acre. The slender stalks and abundance of leaves make this Corn an enormous yielder of valuable forage. The full description will be found on page 138.

Elephant Fodder Corn.

This brand has become famous as the King of Medium Dent Fodder Corns. It grows tall, is exceedingly leafy and forms good sized ears freely, even in the North. For feeding value it is unsurpassed. Full description and prices on page 139.

Sterling Brand Poultry Feeds.

Sterling Brand Feeds represent the same superior quality as Sterling Brand Seeds and are for those who want the best. Sterling Poultry Feeds are unexcelled for purity, feeding value and careful preparation. They are economical to use because they contain only good, clean materials mixed in the proper proportions to make balanced rations for your birds at every age. See page 164.
GOOD BOOKLETS ON LIVE TOPICS?

Our Library of Sixteen Booklets for the Successful Farmer and Gardener.

“Alfalfa.” Seeding, cultivating, harvesting and feeding this valuable crop.

“Cabbage Growing.” Seeding, transplanting, cultivating, harvesting, etc.

“Clover.” Handles this subject in concise, though complete, manner.

“Field Corn.” Deals particularly with corn growing in the North.

“How to Build a New Lawn.” Culture for vegetables, flowers, shrubs, etc.

“Insect Pests.” How to control them.

“Lawn.” How to build a new lawn, repair old lawns and keep a lawn green.

“More Pork Profits.” The care and feeding of swine, including pasture crops.

Our sixteen booklets on the above subjects may tell you many things you already know; they are also quite sure, we think, to tell you some things that you do not now. If they give you just one idea that will save you labor or increase your profits, it is worth well your while to read them.

Our Offer. We will, however, send if requested, a booklet free with orders for each of articles on which the booklets treat. With an order for Field Corn, we will send a booklet on “Field Corn for the Northwest;” with an order for Poultry Feed or Supplies, we will send a booklet on “Poultry Profits;” also with an order for Onion Seed, a booklet on “Onion Culture.” Treats on every phase of this subject.

Our Library of Sixteen Booklets for the Successful Farmer and Gardener.

INFORMATION AND SERVICE BUREAU.

For many years past, we have been in the habit of replying, more or less fully, to a great many thousands of inquiries which have come to us by mail, and we have given assistance particularly to farming, gardening, garden supplies, gardening, and all who have been interested in raising and feeding this valuable crop.

Many have seen the latest book on the market and have gained a fund of valuable knowledge and information. Others have come from houses long established in the seed business in the older countries of Europe. Each is especially fitted and trained in his own particular line. Having this corps of experienced men we are in a position to distribute accurate and timely suggestions without cost to our customers and in no way incurring obligation.

We therefore urge those desiring assistance or advice to correspond with us and we will gladly give all the information in our power, within the reasonable bounds of a letter. Please write inquiries on a sheet of paper separate from your order, so that it may not interfere with prompt shipment of your order. We also have issued a series of booklets on timely subjects which are listed above. These will be sent free with orders as stated, or may be secured very reasonably. Send for this catalogue.

Features of Especial Interest to be found in this Catalogue.

For these reasons we hope our customers will not discard this catalogue after making out their orders, but will preserve it for reference during the growing season or for the information and features of their interest.

Arrangement of Departments in this Catalogue.

Flower Seeds. Arranged in alphabetical order. Pages 68 to 89.

Harvest Plants, including Peonies, Iris and Phlox. Pages 91 to 95.

Roses, Fruits, Trees, Shrubs and Bulbs. Pages 96 to 119.

Grass and Field Seeds. Pages 120 to 186.

Insecticides, Fertilizer Supplies and Sundries. Pages 187 to 190.

Our Trade Mark Means.

Sterling Bag Trade Mark is used to brand only those varieties of seeds which we especially recommend to our customers. A variety so marked will be found the best of its kind in every instance. We use this method to designate our specialities.

Sterling Brand Seeds are for those who want the best. Unexcelled for purity, position, stamina, and color. Sold only in sealed bags. Look for the Sterling Trade Mark.
Northrup, King & Co., Seedsmen, Minneapolis, Minn.

Headquarters For

POULTRY FEEDS

Northrup, King & Co.'s Sterling Poultry Feeds are economical to use because they contain only good, clean materials mixed in the proper proportions to make balanced rations for your birds at every age.

Market Conditions Changing.
Everywhere throughout the great Northwest poultry keepers are beginning to realize that market conditions are changing, that the call for poultry and eggs is constantly increasing, but that a higher quality than before is being demanded.

The up-to-date storekeeper candles all eggs before buying them; no longer can he afford to take chances with eggs of doubtful age.

Every town of any size now has its produce company where you can dispose of your birds to be fattened for market.

Modern Methods Essential.
You can profit by these changes and make more money on your flock if you will use modern methods of handling it. This includes careful selection of breeding stock, proper housing and wise feeding. We hear much nowadays about balanced rations, which is merely another name for common-sense feeding, based upon the principle of giving the birds what they need to keep them nourished and lay eggs.

You Can Rely Upon These Feeds.

See Pages 165-167 for Prices and Complete Descriptions.

Sterling Baby Chick Starter.
A wholesome, ready-prepared starting food which will nourish the chicks so they can make rapid growth. Contains the necessary material to form bone and feathers. To be fed the first three weeks.

Sterling Chick Feed.
This mixture is a splendid combination of seeds, cracked grains, ground bone and fine meat scraps. It gives the chicks quick growth and tends to keep them in good health. For chicks three weeks old and over.

Peep o' Day Chick Meal.

The ideal food for baby chicks. Should be fed the first three weeks in combination with Sterling Baby Chick Starter. Feeding directions on each package. Put up in a handy 5-lb. carton.

Sterling Hen Feed.
A splendid, well-balanced feed, composed of a variety of bright, plump grain, oil meal, etc. It supplies the variety which hens need to thrive.

Sterling Scratch Feed.
This is a trifle lower in protein than the Sterling Hen Feed and some different grains. It will help your flock "shell out" the eggs.

Sterling Poultry Mash.
A high protein mash, containing meat meal, ground bone, middlings, alfalfa meal, oil meal and pure ground grains. It is unexcelled for baby chicks or laying hens. Especially recommended for moulting birds and winter layers.

Start Baby Chicks Right.
For baby chicks especially it is important to feed them so they will get a good start and develop rapidly. Also getting eggs in winter is largely a question of proper feeding. Sterling Poultry Feeds are scientifically prepared to meet every need.

Demand For Sterling Poultry Feeds Increasing.
Many years ago we started making Sterling Poultry Feeds, on a small scale at first, but rapidly increasing, until last spring we could hardly supply the demand. This year we have installed the most up-to-date equipment to increase our output by several hundred cars.

Our Favorable Location.
Minneapolis is an ideal center for handling Poultry Feeds. Being the great grain market it offers splendid facilities for procuring the raw materials at the lowest cost, and its many railroads afford quick, economical shipping of the prepared feeds.

We are always at your service to help you solve your Poultry Feeding problems. If you are interested, write for samples and our Red Figure Price List, showing present values of the Poultry Feeds mentioned below.

Sold only in Sealed Bags.
TESTED AS TO GERMINATION

Northrup, King & Co.'s "Sterling" Lawn Grass Seed

A Beautiful, Smooth, Velvety, Green Lawn is Certain Through Sowing

Northrup, King & Co.'s "Sterling" Lawn Grass Seed

A smooth, velvety lawn surrounding a house adds not only to the value, but enhances the enjoyment of every home, whether it be in city, town or country. When properly made, a lawn is as satisfactory as any investment a home owner can make.

A lawn may be made in two ways, by sodding or by sowing seed. Sodding is not only very expensive, but unsatisfactory as well. Sods are ordinarily taken from a pasture or along the roadside and almost invariably contain weed seeds and coarse, tufty grasses which appear after the lawn is made. Seeding is not only more economical but is attended with better results.

The most important thing to consider in selecting seed for lawn grass is to obtain a proper mixture of several varieties, for two reasons. First, each variety is at its best during a certain part of the season. By properly choosing early, medium and late grasses, a smooth, even, green lawn is assured from early spring to late Autumn. Second, a given area can support only so many grass plants of one kind for they all absorb the same sort of food, but if several varieties are sown, the same area will support many more plants, as different sorts live on various elements in the soil. This will give a much thicker and more luxuriant turf all over the lawn.

With these facts in mind our Sterling Lawn Grass Seed is scientifically combined. Our experience of many years has given us an intimate knowledge of grasses, their habits and requirements. In our Sterling Lawn Seed are included the best varieties—pure, clean and free from foul seed. Our Sterling Lawn Seed is very quick in growth and is ready for moving in from six to eight weeks from the time the seed is sown.

From early spring until late in the Fall, lawns sown with our Sterling Lawn Seed remain green and fresh, for the reason that this mixture includes quick growing varieties which are at their best soon after the frost is out of the ground, others that mature and flourish in late summer, and still others that are greenest and sturdiest in Autumn. For each of these seasons there are several different varieties living on different elements in the soil, so that one is certain always to have a satisfactory carpet of green whenever our Sterling Lawn Seed is sown, under favorable conditions.

Strangers visiting Minneapolis, frequently comment upon the beauty of its lawns, both in the public parks and about the homes of the residents. Our Lawn Grass Seed is used very extensively, not only in our own city, but in all parts of the United States, and the demand for it is increasing every year. Our Lawn Seed is used on golf courses, tennis courts, croquet lawns, athletic fields, in parks, cemeteries and private grounds, with varying success. A brand of Lawn Grass Seed, such as our Sterling Mixture, which gives perfect satisfaction for these requirements is bound to insure a fine, beautiful, velvety turf around any well cared for residence.

Not only is Sterling Lawn Seed suitable for making new lawns, but it is equally valuable for quickly renewing old, worn-out areas.

Our BOOKLET ON LAWNS tells how to build new lawns, how to repair old lawns, and how to keep lawns green. We will mail one of these booklets free to any one on request, or it will be sent with every order for these Seedsmen, Minneapolis, Minn.
Northrup, King & Co.'s Shady Place Mixture.

(Sold only in sealed bags.) On almost every lawn there are shady places where difficulty is experienced in getting grass to grow. These bare spots are very unsightly and disfigure the lawn. In such places proper seeding may be all that is required. In this mixture we have combined fine, dwarf growing, evergreen varieties which do well in sheltered or shaded spots. Some varieties of grass require more sun than others, therefore if the kinds which need the least sun are selected, those sorts when sown in shady places will thrive and make a good appearance. Frequently a shady lawn, which is at the same time insufficiently drained, becomes affected with moss and coarse, bog grasses. In such cases an application of slacked lime at the rate of forty to fifty pounds to each thousand square feet is an excellent remedy; but the moss should be first removed with a sharp rake. When this is done, sow our Shady Place Lawn Mixture, which will bring greenness to the bare spots and restore the beauty to your lawn. Of course, very densely shaded places are quite hopeless and no variety of grass can be made to flourish under such conditions.

Price. Lb., 35c; 10 lbs., $3.25; 20 lbs., $6.50; 25 lbs., $8.00; 50 lbs., $15.00; 100 lbs., $30.00; by express or freight at purchaser's expense. Bbags free. If wanted by parcel post add for postage at rate on page one.

Nurse Crops For Lawns.

Kentucky Blue Grass is the basis of all good grass seed mixtures and the one which will eventually occupy the land. It is very slow to germinate, frequently lying in the soil 5 to 6 weeks before sprouting. On this account we advise the general use of nurse crops. For this purpose we recommend oats, medium red clover and winter rye, to be used according to the suggestions below. For the fall nurse crop use winter rye.

Nurse crops are especially desirable when a lawn is sown very late in the Spring and there is danger that the hot sun will dry up the soil and burn the grass seedlings before they become well started. Under these conditions either oats or medium red clover are useful. Oats produce shade more quickly, but medium red clover is more attractive and also enriches the soil. Medium red clover is also valuable for improving vacant lots, boulevards, or wherever a good effect is desired at slight expense.

Sterling Garden and Lawn Fertilizer. An excellent lawn dressing containing the proper plant food to stimulate the grass into luxuriant growth. This is especially valuable in early Spring to fertilize the bare places before sowing seed. See page 162 for complete directions. Prices: 5 lbs., 30c; 10 lbs., 50c; 25 lbs., $1.00; 50 lbs., $1.75; 100 lbs., $3.00; 500 lbs., $12.50; 1000 lbs., $25.00. F. G. B. Minneapolis.

Northrup, King & Co.'s Putting Green Mixture Is Composed Entirely of Dwarf Growing, Evergreen Grasses Which Make a Firm Durable Turf.

Northrup, King & Co.'s Terrace Mixture.

(Sold only in sealed bags.) The secret of a fine sward for terraces lies in obtaining grasses which root deeply and spread so as to make a heavy mat of sod. To keep such sod in first-class condition, the grass should not be cut too often nor too closely. Give it a chance to grow strong and tough. Let the food which the grass blades get from the air, dew and rain, work down to strengthen the roots.

This mixture is suited for sowing on terraces, embankments and hillside, preventing heavy rains from washing them out, and withstand- ing drought and exposure; produces at the same time a velvety, luxuri- ant turf of especially fine appearance.

To keep the terrace looking well, it is important that the grass plants should always be healthy and vigorous. Sterling Garden and Lawn Fertilizers, Bone Meal and Sheep Manure are splendid for the purpose. See page 162 for complete information. Some years ago, at the time the Minneapolis Industrial Exposition Building was opened, the grounds were terraced to the street. The management was anxious to have the grounds look as well as possible, but was in a quandary as to the terrace. We supplied them with our Terrace Mixture six weeks before the Exposi- tion opened, with the result that at the end of that time the terraces looked as though they had been established for several years.

Price. Lb., 35c; 10 lbs., $2.25; 25 lbs., $5.00; 50 lbs., $15.00; 100 lbs., $30.00; by express or freight at purchaser's expense. If wanted by parcel post, add for postage at rate on page one.

See Red Figure Price List for present values of Kentucky Blue Grass, Clovers and Red Top, Etc.

Lawn Restoring Grass Seed.

In the Spring of the year there are, in almost every lawn, thin or bare spots which were caused by ice or exposure during the winter months. These may be very quickly renewed by an application of this mixture which is made up of those varieties of seeds which will rapidly grow and occupy ground before weeds obtain a foothold. A spotted lawn may thus be made uniform and beautiful at slight expense Price, Lb., 35c; thus be made uniform and beautiful at slight expense Price, Lb., 35c; 10 lbs., $2.25; 20 lbs., $8.50; 25 lbs., $8.50; 50 lbs., $15.00; 100 lbs., $20.00; 500 lbs., $80.00; 1000 lbs., $135.00; 1100 lbs., $170.00; 2500 lbs., $14.00; 2500 lbs., $25.00; by express or freight at purchaser's expense. If wanted by parcel post, add for postage at rate on page one.

Fair Green Mixture.

Golf courses require a mixture of grass seed which will give a smooth, level, compact turf. Our long experience in the mixing of grasses en- ables us to select those best adapted for this purpose. This seed was sown on the Minikahda Club's golf course, pronounced by professional players to be the finest sward in the country. Price, Lb., 35c; 1 lb., $2.75; 20 lbs., $25.00; 25 lbs., $30.00; 50 lbs., $50.00; 100 lbs., $125.00; by express or freight at purchaser's expense. If wanted by parcel post, see rates on page 1.

Putting Green Grass Seed.

A superior mixture of deep rooting grasses, of fine fibrous character, forming a strong, durable turf. Excellent for croquet or bowling greens, tennis lawns, putting greens or other places where a durable, fine sward is desired. Present value, Lb., 35c; 10 lbs., $3.25; 25 lbs., $8.50; 50 lbs., $13.00; 100 lbs., $25.00; by express or freight at purchaser's expense. If wanted by parcel post, add for postage at rate on page one.

The Beautiful Lawns of Minneapolis and Along the Shores of Lake Minnetonka, Now Famous Throughout the U. S., Have Been Established With Sterling Lawn Grass Seed.
Sweet Pea Novelties
Northrup, King & Co.'s Selection of Spencer Sweet Peas for 1916
Beautifully Illustrated on Front Cover Page.

The following ten varieties represent the most beautiful of all Sweet Peas to date, the greatest advance in Sweet Peas in a decade. We urge all Sweet Pea lovers to plant our Supreme Collection this Spring.

Margaret Atlee
The Spencer Supreme

We are satisfied that the newer Spencer Varieties of Sweet Peas are not yet fully appreciated in the United States. The supply of seed of the sorts which we offer below is still very limited but when the seed stock increases and they become better known they will be far more popular, as they show the greatest advance in Sweet Peas in a decade.

Both in color and size they represent the latest triumphs of the plant breeder's skill. In these will be found the richest shades from apricot pink to silvery blue, ivory white, and purple.

We trust all our customers will try a few of these beautiful selections this year, that they may enjoy in their own gardens, the Sweet Peas which at home and abroad have received high awards at many Sweet Pea exhibitions.

The numbers below correspond to those on the cover.

1. New Margaret Madison
   Azure Blue, Tinted Mauve
   Atlee Northrup, Co.'s
   A large perfect Spencer, of delicate azure blue, slightly tinted with mauve. The mauve tint shows only in the newly opened blossoms and the fully expanded flowers are of clear light lavender.
   Pkt., 15c; oz., 50c; ½ lb., $1.50; lb., $5.00.

2. Mrs. Routzahn
   Buff and Pink
   Buff or apricot ground, flushed and suffused with delicate pink, deepening towards the edges. The flowers are of largest size, beautifully crimped and waved. The standard is broad and deep; the wavy wings are so large that they usually hide the keel.
   Pkt., 10c; oz., 30c; ¼ lb., 90c; lb., $3.00.

3. King Edward Spencer
   Gigantic Carmine Scarlet
   The standard measures one and three-quarters to two inches across by one and one-quarter deep. The wings are unusually large, making the flower appear gigantic in size.
   Both standard and wings are rich carmine-scarlet.
   Pkt., 10c; oz., 30c; ¼ lb., 90c; lb., $3.00.

4. Flora Norton Spencer
   Bright Blush Lavender
   The flowers show the same shade of rich lavender as seen in the grandiflora variety of the same name. They have much of the same beauty of color tone.
   Pkt., 10c; oz., 30c; ¼ lb., $1.00; lb., $3.50.

5. Othello Spencer
   Rich Deep Maroon
   Both wings and standards are exquisitely waved. The long stems are thick and carry well three or four fine blooms of a rich deep maroon.
   Pkt., 10c; oz., 30c; ¼ lb., $1.00; lb., $3.50.

6. Blanche Ferry Spencer
   The Favorite Pink and White
   This is similar in color to the popular grandiflora variety of the same name but this new Blanche Ferry is of true Spencer type. The standard is rose, wings white, tinted light pink.
   Pkt., 10c; oz., 30c; ¼ lb., $1.00; lb., $3.50.

7. Asa Ohn
   Soft, Pinkish Lavender
   A soft, pinkish lavender self. Flowers very large and beautifully waved. A very charming variety, bearing four flowers on each stem.
   Pkt., 10c; oz., 30c; ¼ lb., 90c; lb., $3.00.

8. King White
   The Largest White Spencer
   The grandest of all white Sweet Peas, and of the most up-to-date Spencer form. It is much the largest white Spencer —the buds are of exceptional size before opening, even the seed pods are unusually large. The stems are long and stout, and bear practically always four blossoms.
   King White creates a sensation last season wherever shown.
   Pkt., 15c; oz., 50c; ¼ lb., $1.50; lb., $5.00.

9. Margaret Atlee
   The Spencer Supreme, Salmon Pink
   The largest and finest Sweet Pea yet introduced. It is a rosy salmon-pink on a creamy buff ground, a rich soft color, and extremely attractive, both as individual flowers and in the bunch. The standard is large, wavy and frequently double. The wings are also large, wavy, well set. There are usually four blossoms to a stem; well poised and graceful.
   Pkt., 15c; oz., 50c; ¼ lb., $1.50; lb., $5.00.

10. Royal Purple
    A New Sweet Pea Shade
    Royal Purple is a new shade in Sweet Peas, a rich purple, almost a true royal purple. This shade does not exist in grandiflora, but it is obtainable from all our new Spencer varieties.
    Pkt., 15c; oz., 50c; ¼ lb., $1.50; lb., $5.00.

King Collection of Spencers

Includes one oz., of each of the above ten varieties of Spencers, illustrated on the cover. Pkt., $1.00 postpaid.

Supreme Collection of Spencers

Includes one packet of each of the above ten varieties of Spencer Sweet Peas. The 10 pkt., $1.00 postpaid.
Fiery Cross

**Fiery Cross**

An Appropriate Name.

Fiery Cross is a most appropriate name for one of the most unusual novelties. During the seventeenth and eighteenth centuries, when a burning fire-red, or scarlet, without any shading and which scintillates and glitters in bright sunlight, this adding a glowing, fire-like sheen which radiates over the flower. Unlike most of the ordinary varieties, it does not scorch or burn even during extended periods of intense sunshine, therefore it can be grown in all soils without shading. The beautifully waved and fluted flowers are borne easily in threes and fours, well placed on long, stout stems.

Honors Awarded.

Fiery Cross was recommended for the Silver Medal variety of National Sweet Pea Society of England, July, 1914, which was awarded July, 1915. It received an award of merit at the exhibition held by the American Sweet Pea Society at the San Francisco Fair, June 10, 1915, as being the outstanding variety in the show. Also Certificate of Merit at the Sweet Pea exhibition of the Pennsylvania Horticultural Society, June 22, 1915; and Silver Medal at the Seventh annual exhibition of the American Sweet Pea Society, Newport, R. I. July 15, 1915.

Price.

In sealed packets containing 10 seeds each; per packet, 25c.

Various Comments on Fiery Cross.

Awards of Merit for New Variety.

Sweet Pea, Fiery Cross.—The flowers are of a brilliant glowing red, with a shade of rose at the base of the petals. This variety was received for the Silver Medal, 1915. The exhibitor was Mr. A. Malcolm, Town House, Dun's.

Support.

THE HORTICULTURAL ADVERTISER, LOWDHAM, NOTTS, ENGLAND, JULY 7, 1914.

GREAT SWEET PEA EXHIBITION.

The Flower Show of the American Sweet Pea Society was successfully opened on June 11th, in management, at the Palace of Horticulture, Panama-Pacific International Exposition.

The center portion of one exhibit was especially given to the magnificent novelty "Fiery Cross" and this novelty attracted a tremendous amount of attention. All day an account of its brilliant, colorful. The jury of the Panama-Pacific International Exposition recommended that a Gold Medal be awarded to Mr. Malcolm, as the exhibitor. An award of merit was voted for "Fiery Cross".

Sweet Pea Culture.

Preparation of Soil. For Sweet Pea rows, prepare a trench 2 feet deep and at least 1½ feet wide. Fill in with a mixture of rich loam and well-rotted barnyard manure or 5 lbs. of sheep manure and 1½ lbs. of bone meal for each 5 feet of row. Then cover with 6 inches of good soil. Sweet Peas root deeply, so the manure should be worked in deep down and carefully mixed through the soil at bottom of trench.

The trench should not be filled in perfectly level but should slope gradually towards the center, which is to be 2 inches deeper than the sides.

Planting. Should be done the first day that the soil is dry enough to work easily without becoming sticky. If the soil is worked while wet it may ruin the crop.

White seeded Sweet Peas should not be sown until the ground has thoroughly thawed. Sweet Peas require a long period of slow growth under cool conditions which are necessary for good root formation. Later sown Sweet Peas, especially when planted after May 15th are seldom worth while. Sow 1 lb. of seed for 800 feet of row.

Make a furrow in the center of trench 6 inches wide and 3 deep. Sow the seed in this furrow in two rows, 4 inches apart and 2 inches apart in the row. Cover with about an inch of fine soil and tamp down firm. If soil is damp and heavy tamp more lightly than 1½ dry and light. After tamping, rake another inch of soil over seed. Do not cover seed more than 2 inches deep altogether.

Cultivation. When vines are 3 inches high, fill up the 4 inches between the rows with fine soil, at the same time drawing the soil to each side, covering the vines to within an inch of their tops. Be careful not to cover up the vines entirely, straighten any crooked plants and remove weeds. After the vines have grown another 3 inches repeat the operation; at this time hoe up the soil outside the rows to a level with the soil around the vines, so that what was originally the trench becomes a ridge.

Every vine is now straight and firmly surrounded with soil 8 inches above the seed bed. This filling up is very necessary to keep the roots moist and cool.

Never allow vines to fall over, as they cannot be properly straightened afterwards, but support with brush, wire netting or strings.

Mulching. Before blooming time fill trench between the rows with straw or grass chippings. This will keep the soil cool and moist.

Watering. Sweet Peas like plenty of water in dry weather. After blooming begins, fill the trench between the rows with water two or three times a week, if there is a lack of showers.

Cutting. Should be attended to every day, whether you have use for the flowers or not. If seed pods are allowed to form, the vines will soon cease blooming. In the afternoon or early evening is the best time for cutting. The flowers being then fully developed and hardened, last much longer in water.

It is only necessary to cut each day the flowers that are fully developed. It is after forming seed pods that the vine begins to wane. Be careful in cutting not to disturb or break the vines. Carelessness in this will soon ruin them.

It is best not to step too near the vines when picking the flowers as this would pack the soil surface, which should be kept loose and open.

Enemies. For strong and cut worms. Sow around the young shoots will protect them more or less and sometimes the worms can be attracted and killed by putting a bunch of green grass dipped in Paris Green near the Sweet Pea rows. Burpee & Co. for their bulletin.

For plant lice or aphis use "Black Leaf 40", Neo-Pume Liquid or some other tobacco extract. See page 175 for instructions.

Sow 1 lb. of seed for 100 feet of row.
SWEET PEAS
Northrup, King & Co.’s Giant Orchid Flowering or Spencers

The rapid progress in the development of Sweet Peas to their present state of size and beauty has practically all been accomplished within the last ten or dozen years. For a century and a half previous it was the marvel of some botanists that more varieties of Sweet Peas had not been developed and that greater size, length of stem and variety of colors had not been obtained. It was discovered eventually that artificial cross fertilization must be undertaken in order to produce the desired results.

New color forms appeared in rapid succession until a new type was found in the gardens of Earl Spencer, Northamptonshire, England. This new variety was extremely beautiful, wonderfully formed and the largest Sweet Peas grown and was known as Countess Spencer. From this variety has sprung the modern race of Giant Orchid Flowering or Spencer Sweet Peas. We believe that this form is destined to supersede the older types, as soon as colors have become fixed and the seed can be produced in sufficient quantity to supply the demand. Because of the fact that the majority of the flowers of true Spencer fall off as they fade, that is before the seed pod is formed, the seeding propensity of this type is greatly reduced and as a consequence seed is more expensive because of the added cost of production. This habit has its advantages, however, as the flowers are greatly lengthened and the abundance of bloom is largely increased. The strength of the plant is directed towards production of blossoms rather than seed.

The characteristics of the Spencer Sweet Peas grown under favorable conditions, are strong, healthy growth, plants attaining height of from six to nine inches, for full development, at least six inches apart. The blossoms are of immense size, measuring 2 to 2 1/2 inches across. They are beautifully formed with huge standards, open and upright and immense wings gracefully poised. Both standards and wings are delicately waved; the undulations reflecting lights and casting shadows in the depths, thus showing varied tints of roses which greatly enhances the colorings. Three and often four of these handsome blossoms are borne on long strong stems, rendering them available as cut flowers for vases, bouquets and other decorations.

NAMED VARIETIES-SPENCERS

2835. Apple Blossom Spencer. The ground tint is primrose, standard rose, showy tips of deeper rose, wings light carmine, the whole color overspread on primrose. Pkt., 10c; oz., 75c; lb., 25c; 10lb., $3.00.

2837. American Spencer. Bright crimson scarlet, striped on white. Pkt., 10c; oz., 30c; lb., 35c; 10lb., $3.00.

2850. Aurora Spencer. The ground color is a cream-white, and this is exquisitely flushed and mottled with rich orange-salmon. Pkt., 10c; oz., 30c; lb., 35c; 10lb., $3.00.

2860. Captain Spencer Variety. Bright, clear pink showing a little deeper at the edges. Pkt., 10c; oz., 30c; lb., 35c; 10lb., $2.50.

2865. Dainty Spencer. White with very light pink edge. Pkt., 10c; oz., 30c; lb., 35c; 10lb., $3.00.

2880. Evelyn Hemus. Cream, shading to yellow, terra-cotta points; standards full waved. Pkt., 10c; oz., 30c; lb., 35c; 10lb., $3.00.

2882. Helen Lewis or Orange Spencer. Immense rich crimson-orange; very fragrant. Pkt., 10c; oz., 30c; lb., 35c; 10lb., $3.00.

2883. Helen Pierce Spencer. A gorgeous bright blue, marbled and overlaid on ivory white. Pkt., 10c; oz., 30c; lb., 35c; 10lb., $5.00.

2884. John Ingman. A new rich rosy-carmine, veined deeper. Pkt., 10c; oz., 30c; lb., 35c; 10lb., $2.50.

2885. Jessie Cuthbertson Spencer. This has a primrose ground, well marked with stripes, blotches and blazes of crimson pink. A bunch produces a very striking effect of golden rose. Pkt., 10c; oz., 30c; lb., 35c; 10lb., $3.00.

2886. Lovely Spencer. Standard light blush pink with blotch of rose at the base; wings the same, all suffused with soft buff. Pkt., 10c; oz., 30c; lb., 35c; 10lb., $2.50.

2892. Menie Christie. Both the large fluted standard and wavy wings are of the same color, a very strong rose, with a slightly deeper shade in the standard and a satiny sheen on the petals. Pkt., 10c; oz., 25c; lb., 75c; 10lb., $2.50.

2893. Mrs. Chas. Mander or Royal Purple Spencer. A distinct sort; color rosy-lavender. Pkt., 10c; oz., 30c; lb., 35c; 10lb., $3.00.

2894. New Miranda Beauty, A charmer combination of bright apricot-pink on a primrose ground a little deeper at the margins and showing pure primrose at the base of the petals, of perfect Spencer form. Pkt., 10c; oz., 30c; lb., 35c; 10lb., $3.00.

2915. Primrose Spencer. Primrose color throughout. Pkt., 10c; oz., 30c; lb., 35c; 10lb., $2.50.

2950. Queen Victoria Spencer. The background is quite a deep primrose flushed with rose. Pkt., 10c; oz., 30c; lb., 35c; 10lb., $3.00.

2965. Sweet Thompson. Chocolate and deep brown, striped, flaked and mottled on ivory white. Pkt., 10c; oz., 30c; lb., 35c; 10lb., $3.00.

2970. Veiled Bride. An ivory ground, sprinkled or marbled with light pink. The petal tips are quite uniform though, perhaps a trifle deeper at the margins. Pkt., 10c; oz., 30c; lb., 35c; 10lb., $3.00.

2972. Wedgewood. A bright slivered blue self color, of modern Spencer size, free blossoming, flowering four blossoms to the stem. Pkt., 10c; oz., 30c; lb., 35c; 10lb., $3.00.

2975. White Spencer. Flowers absolutely pure white. Stems 12 to 15 inches in length. Pkt., 10c; oz., 30c; lb., 35c; 10lb., $3.00.

SPENCER SWEET PEA COLLECTIONS.

Columbia Collection. 25c.

One packet each of three varieties of Spencers, in three distinct colors—red, white and blue, our selection; 3 packets for 25c, postpaid.

Spencer Sextette Collection. 50c.

One packet each of six Spencer varieties in separate colors for 50c, postpaid. America, Spencer, crimson scarlet; White Spencer, Captain of the Blues, bluish purple; Helen Lewis or Orange Spencer, Countess Spencer, pink, John Ingman, rosy-carmine.

"Customer’s Choice." $1.00

One packet each of 25 varieties of Spencer Sweet Peas, our selection from those offered above, also 1 packet each of the 10 supreme varieties offered on page 11 and 1 packet of Ferry Cross, 36 packets in all for $3.50, postpaid.
Northrup, King & Co.'s Grandiflora Sweet Peas.

This is the well known type which has been grown for many years. It comprises two forms, "hooded or shell-shaped," and "open." The Grandifloras are most easily grown and are always popular.

We will furnish the following varieties at the uniform price of 5c a pkt., 15c an oz., 40c for a 1/4 lb., $1.25 a lb., postpaid. By express or freight at purchaser's expense, $1.15 per lb.

WHITE.

3032. Dorothy Eckford. Finest white; very large.
3033. Emily Henderson. White; very floriferous.
3034. Phenomenal. Slivery-white, suffused with soft pink, edged with rich purple.
3035. Shasta. Large, pure white, fluted.
3036. White Wonder. Largest white, often bearing 6 flowers on a stem.

YELLOW AND PRIMROSE SHADES.

3042. Queen Victoria. Light primrose.
3045. Songs of Sthenon. Large, pink, edged.

PINK AND ROSE SHADES.

3050. Apple Blossom. Crimson pink.
3054. Dainty. White with pink edge.
3064. Lovely. Pink standard, rose wings.
3074. Prima Donna. Lovely pale pink.
3075. Queen of Spain. Peach-blossom pink.

RED STANDARD, WHITE WINGS.

3076. Earliest of All. Rose and white.
3078. Extra Early Blanche Ferry. The popular pink and white.

LAVENDER AND LIGHT BLUE SHADES.

SHADES OF RED.

3084. King Edward VII. Bright crimson.
3085. Millie Martin. Large, rose-crimson.
3087. Queen Alexandra. Nearest pure scarlet.

BLUE AND PURPLE SHADES.

3115. Helen Pierce. Pure white, mottled blue.
3119. Prince Ouf. Large flowers, striped and mottled bright blue on white ground.

PINK AND RED STRIPES.

3124. Aurora. Flaked orange-salmon.

CLARET AND MAROON SHADES.

3128. Black Knight. Very deep maroon, large size and open form.
3130. Othello. Dark glossy maroon.

Grandiflora Sextette Collection. 1 packet each of 6 Grandifloras varieties in separate colors for 25c, postpaid.

Northrup, King & Co.'s Twelve Bouquet Gems.

50c, postpaid. This beautiful collection contains one packet of each of the 12 choicest, large-flowered, fragrant sorts borne on long stems, embracing the cream of our Grandiflora line. We also offer one ounce of each of the twelve Bouquet Gems for $1.35 postpaid.

Grandiflora Collection A.

One packet each of the 45 varieties of Grandifloras listed above for $2.00 postpaid.

Grandiflora Collection B.

One ounce each of the 45 varieties of Grandifloras listed above for $4.25 postpaid.

Acres of Sweet Peas Grown for Northrup, King & Co.
SWEET PEAS.

3150. Northrup, King & Co.'s Sterling Mixture.

Sold only in sealed packages. The finest and most desirable mixture possible to put together. The scene of richness and beauty, matched in combinations of colors and giant sweet scented flowers. Every color of the rainbow and an almost unlimited variety of shades, tones and combinations of colors, striped, splashed, mottled and margined. Nothing seems to have been forgotten. It is made up regardless of expense, the aim being to secure in this mixture the largest flowering sorts and the widest possible range of colors. Without doubt this mixture reaches perfection. It is our aim to constantly improve, when possible, by adding new varieties as they are introduced. We include the magnificent spencers, the superb Unwins and the always popular Grandifloras; a mixture, in fact, of which any one may be proud. Pkt., 5c; oz., 10c; ½ lb., 50c; lb., $1.00, postpaid.

3155. Eckford's Large Flowering Mixed. This mixture embraces the introductions, including the recent novelties of Mr. Eckford, the Sweet Pea specialist of England, who has accomplished more than any other individual in bringing the Sweet Pea to its present state of beauty, size and perfection. Pkt., 5c; oz., 10c; ½ lb., 50c; lb., $1.00, postpaid.

3160. Choice Mixed. This is a most excellent mixture, embracing all the standard varieties and many colors. OZ., 3c; ½ lb., 10c; 1 lb., 15c; postpaid.

3165. Cupid Dwarf or Bedding Mixed. Sown as a form a line of emerald green foliage a little over a foot wide and from 6 to 8 inches high, and from June until late summer are literally a sheet of bloom, and from the fact that they cover the ground so closely they are not so likely to suffer from drought as the tall sorts. Pkt., 5c; oz., 10c; ½ lb., 50c; lb., $1.00, postpaid.

3170. Northrup, King & Co.'s Giant Orchid Flowering or Spencer Mixture.

Spencer varieties of Sweet Peas have come into general favor so rapidly that the demand has been large for all Spencer sorts in mixture. We have included in this combination nearly all of the varieties, making a rare and lasting pleasure to the grower. The vines are strong, healthy and vigorous in growth and produce a wonderful profusion of flowers of great beauty, size, perfect form and coloring. Those preferring to grow all sorts together, rather than separate colors, will find this unsurpassed. Pkt., 100 seeds, 10c; oz., 25c; ½ lb., 75c; lb., $2.50, postpaid.

3000. Frank Doby. A large, fine, light lavender, with bold wavy standard and widely spreading wings, beautifully fluted. Pkt., 5c; oz., 10c; ½ lb., 50c; lb., $1.50.

3015. Mrs. Alfred Watkins. Clear pink, deeper at outer edges. Flowers large and widely spreading, with the wavy or crinkled effect so much desired. Pkt., 5c; oz., 10c; ½ lb., 50c; lb., $2.00.

3019. Nora Unwin. Beautiful pure white, finely waved or fluted. A very effective flower of good substance. Pkt., 5c; oz., 10c; ½ lb., 50c; lb., $1.50.

3020. Phyllis Unwin. Beautiful rose color throughout. The long stout stems carry three and four flowers each. Standard crinkled, wavy, with broad wings. Pkt., 5c; oz., 10c; ½ lb., 50c; lb., $2.00.

3021. Gold Medal Spencer Sweet Peas Mixed. This is a combination of many very beautiful Spencers or Giant Orchid Flowering Sweet Peas of recent introduction and will prove a real treasure in its great range of rich colors and shades. Pkt., 100 seeds, 10c; ½ oz., 25c; oz., 40c; ¼ lb., 85c; lb., $3.00, postpaid.
Raise Your Own Vegetable and Bedding Plants.

Triumph Greenhouse.

This is made in sizes, all 10 ft. 8 in. wide, and ranging in length from 12 ft. to 21 ft.

This is a real greenhouse, which in details of construction, workmanship and materials is not excelled by far more expensive houses.

All material used in the manufacture of the roof, wall plate, gable, rafters, etc., is the very best of red cypress, and we have not neglected or slighted any feature that would tend to give lasting satisfaction to the purchaser.

Our greenhouses are so constructed that the roof sash may be adjusted to allow just the right amount of overhead ventilation. The transom in front is equipped conveniently for adjusting with no direct draft.

Complete, including everything required for the construction of this building, sash glazed, doors, hardware, lumber, nails, paint, etc.

P. O. B. Davenport, Iowa.
ARTICHOKE Roots.

5. Green Globe.

The seed may be sown indoors and plants potted same as the Tomato and set in the garden on approach of warm weather; or the seed can be sown in hills outside, and thinned out to one plant in a hill. Plants should be set in rows three feet apart and two to three feet apart in the row. Grown for the unripe flower heads, which are highly esteemed by epicures. Large pkt., 10c; oz., 40c; ½ lb., $1.25.

ARTICHOKE Roots.

Extremely valuable food for hogs. Every hog raiser should plant them. After one acre is planted their value will be so appreciated that larger areas will be devoted to them. They are not only very healthful, but as a fattening agent are excellent. They yield very heavily, 300 to 350 bushels to the acre being realized on good soil. It is not necessary to dig them for if given an opportunity the hogs will help themselves.

Not only are they valuable for hogs, but are an excellent food for cattle, sheep and horses. Fed to milk cows, they are for the production of milk almost equal to bran because of their succulence.

Artsichokes need planting but once and little or no culture after the first year. Cut as potatoes, only smaller; plant in rows three and one-half feet apart. Plow deep, plant shallow, say two inches. The second year, break up the ground as for corn; they will come up thickly all over the surface. Run through each way with a cultivator when a few inches high.

Those wishing to purchase should place orders very early, to be shipped as soon as favorable weather arrives. By freight or express at purchaser’s expense. 1 lb., 15c; 2 lbs., 25c; 5 lbs., 50c; 10 lbs., 75c; 25 lbs., $1.35; 50 lbs., $2.50; 100 lbs., sufficient for one acre, $7.00.

If wanted by parcel post add 10c per lb. to cover extra cost.

ASPARAGUS ROOTS

Culture. The easiest way to obtain an Asparagus bed is to set out roots. It takes 3 years to secure one from seed, but with our large, strong roots a bearing bed is obtainable in 2 years.

Asparagus roots thrive best in soil exceptionally rich and mellow and supplied with a liberal amount of humus. A simple way to start the Asparagus bed is to plow furrows 7 inches deep and 3 to 4 feet apart, according to the richness of the soil, then set the plants, which should be at least one year old, (two-year-old are better) in the trench, allowing 12 to 15 inches between them; spread the roots out well and cover with two inches of soil. After cultivation, gradually fill up the trench, eventually burying the crowns of the plants to a depth of 6 inches.

Planting shallow and frequently the first season and as soon as the stalks are dead in the Fall, remove them and cultivate the entire surface of the bed to a depth of 4 inches, then very early in the Spring to a depth of 3 inches and again the latter part of June, working the soil into the bed at this time a liberal supply of decomposed stable manure.

By express or freight at purchaser’s expense.

</tr>
</tbody>
</table>

ASPARAGUS SEED

Culture. To start the Asparagus bed from seed, sow 1 oz. to 50 feet of row in early Spring, and transplant to permanent bed the next year as outlined above.

One pound of seed will produce about 3000 sprouts, and should be sown in a light, rich, sandy soil in rows about 15 inches apart and 15 inches deep; sow thinly enough so the plants will not stand closer than 1½ or 2 inches and those should be thinned by hand afterwards, to about three inches apart, care being taken to leave the strongest and most thrifty shoots.

Careful weeding and hoeing are required throughout the growing season. Watering between the rows with liquid manure is of great assistance to the young plants.

The quickest yielding, (a year ahead of seed of other sorts) heaviest producing, finest quality and most disease-resistant of any variety; in color, white with purple tip. Market gardeners are discarding other well known sorts in favor of this variety. Pkt., 5c; oz., 15c; ½ lb., 40c; lb., $1.35.

15. Columbian Mammoth White.

Gives immense yield of clear white roots. A most distinct and valuable variety. The shoots remain white, without earthy or artificial blanching, as long as it is used. Pkt., 5c; oz., 10c; ½ lb., 25c; lb., 75c.

20. Conover’s Colossal.

A standard sort, color deep green, quality first-class, spreads less than other sorts. Yields from 15 to 30 sprouts from a single plant. Pkt., 5c; oz., 10c; ½ lb., 25c; lb., 75c.

22. French Giant Argenteuil.

A splendid, vigorous variety that grows very large, the stalks sometimes weighing four ounces each. It is a very prolific variety and forms the greater part of the fine bundles admired in the Paris markets. Pkt., 5c; oz., 10c; ½ lb., 25c; lb., 75c.

25. Palmetto.

Mammoth in size, light green, regular in growth and appearance. Usually ready for market before other varieties. Pkt., 5c; oz., 10c; ½ lb., 25c; lb., 60c.

Note. All flower and vegetable seeds are sent prepaid except where noted.

BEANS

At the following prices on Beans—packets and quarter pounds are sent prepaid, all larger quantities are shipped at purchaser's expense, if wanted by parcel post, add postage at rates on page 94.

Note. The supply of beans in all sections of the country is the shortest in many years due to unfavorable weather conditions followed by killing frost in August, consequently the stock of most varieties is very limited.

Culture. Do not plant them until the ground becomes dry and warm. Bush Beans may be planted about 2 inches deep in drills from 14 to 18 inches apart according to the variety and richness of the soil, placing the seed 3 inches apart or 4 seeds in hills 24 inches apart each way. Cucumber should be frequent until the plants begin to bloom, but only when the foliage is dry, or if disturbed when wet the vines will wilt.

DWARF WAX VARIETIES

35. Davis Kidney Wax. The most hardy and productive wax bean. The pods are long, white, straight, crisp and tender. The vine is rustless and very vigorous, bearing pods in clusters. Seed kidney-shaped and white. For canning this is unsurpassed on account of the quality of the pod and bean. Pkt., 5c; 1/4 lb., 15c; lb., 45c; 5 lbs., $2.00.

40. Improved German Black Wax. Vines medium sized, vigorous, and hardy. Pods medium length, curved, cylindrical, fleshy, of a clear yellowish-white. Remain for some time in condition for use. Seed small, black. Pkt., 5c; 1/4 lb., 15c; lb., 45c; 5 lbs., $2.00.

42. Challenge Black Wax. Early pods tender and stringless. Seed black. Pkt., 5c; 1/4 lb., 15c; lb., 45c; 5 lbs., $2.25.

44. Pencil Pod Black Wax. Pods are long, pencil-like, very tender and brittle. In color they are rich, dark yellow. Pkt., 5c; 1/4 lb., 20c; lb., 50c; 5 lbs., $2.25.

45. Improved Golden Wax. The plants are hardy and bear an abundance of straight, broad, flat, and stringless pods. Resistant rust to a marked degree, productive and compact in growth, with brown or black markings near the eye. Pkt., 5c; 1/2 lb., 15c; lb., 45c; 5 lbs., $2.25.

55. Wardwell’s Kidney Wax. The strong vines yield abundantly, long, nearly straight, broad, creamy-white pods. They are of fine quality and a fine variety for the market gardener. Matures a little later than the Golden Wax. Seed large, kidney-shaped, white with dark markings about the eye. Pkt., 5c; 1/4 lb., 20c; lb., 50c; 5 lbs., $2.25.

57. Refugee Wax. A superior bean for home use. Pods long, round and yellow; thick, thick, stringless; of excellent flavor. Pkt., 5c; 1/4 lb., 20c; lb., 50c; 5 lbs., $2.25.

DWARF OR SNAP, GREEN POD VARIETIES

60. Bountiful. The plant is very handsome and of sturdy growth, being practically immune to rust and mildew. It is very hardy, early and prolific and continues in bearing for several weeks. The pods are of immense size, rich green, thick, broad, extra long, solid, meaty, rich, tender and entirely free from string. Pkt., 5c; 1/4 lb., 15c; lb., 45c; 5 lbs., $1.50.

65. Black Valentine. Pods are long, round and straight. Very attractive in appearance and of good quality. Pkt., 5c; 1/4 lb., 15c; lb., 45c; 5 lbs., $1.50.

68. Dwarf Horticultural, or Bush Cranberry. Very productive. Pods medium length, broad, thick, curved and splashed with red. Very desirable as a green seeded bean, maturing early. Seed, large, oval, plump and splashed with bright red. Pkt., 5c; 1/4 lb., 15c; lb., 45c; 5 lbs., $1.50.

70. Extra Early Red Valentine. (Round Pod.) Pods are ready to pick in about forty-three days from germination. Vine erect; pods, medium length, curved, cylindrical, with crease in back, very fleshy, crisp and tender; seed long, of medium size. Pkt., 5c; 1/4 lb., 15c; lb., 45c; 5 lbs., $1.50.

72. Longfellow. A remarkably early variety, producing long, round, green pods, solid, fleshy, and exceedingly tender. The pods are very brittle and have no strings when broken, unless the pods are quite old. These Beans are extra early, the pods are ready to pick four days in advance of most other green podded Bush Beans. Pkt., 5c; 1/4 lb., 15c; lb., 45c; 5 lbs., $1.50.

75. Long Yellow Six Weeks. Excellent quality; pods often eight inches long; a popular variety. Pkt., 5c; 1/4 lb., 10c; lb., 30c; 5 lbs., $1.25.

80. Refugee. Very early, hardy, very late, and for this reason used for late planting and for pickles. The pods are long, cylindrical, green and of good quality. Pkt., 5c; 1/4 lb., 15c; lb., 45c; 5 lbs., $1.25.

88. Stringless Green Pod. The earliest and hardiest of all green-podded sorts and produces large, handsome, some pods of which measure fully six inches in length. The plants are very productive, bearing profusely the beautiful green pods, which are perfectly round, straight, broad, tender, brittle, fleshy flavor, very fleshy and entirely stringless. Pkt., 5c; 1/4 lb., 15c; lb., 45c; 5 lbs., $1.50.

87. Improved Goddard or Boston Favorite. A long flat-podded variety, used as a Snap Bean when young and as a Shell Bean when fully developed, being beautifully striped and splashed with bright crimson. Pkt., 5c; 1/4 lb., 10c; lb., 25c; 5 lbs., $1.00.

Please note that quantities of Beans larger than quarter pounds are not prepaid. Refer to top of this page and postage rates on page one.

Northrup, King & Co., Seedsmen, Minneapolis, Minn.
BEANS

Culture. Plant all varieties of Beans after danger of frost is past. Pole Beans require fertile soil. Plant six seeds 2 inches deep in hills around poles 5 feet high, set firmly in the ground. The poles should be set about 6 feet apart each way and the seeds placed in the ground in a circle about 6 inches from the base of the pole. Cultivation same as for Bush Beans.

POLE OR RUNNING VARIETIES.

100. Kentucky Wonder. (Old Homestead.) This climbing productive and bear its pods in large clusters. The vines are strong and thrifty, cling tightly to poles and bear abundantly, the pods hanging in bunches or clusters. They are of the best quality as to color, flavor and tenderness. Seed, oval, white flecks of black. Pkt., 50c; 1 lb., $1.00; 10 lb., $8.00.

102. Kentucky Wonder Wax. This vigorous wax podded variety is very similar to the green podded Kentucky Wonder but the pods are a little broader. The pods are very long, handsome light yellow. Its earliness and hardiness commend it for northern latitudes. Pkt., 5c; 1/2 lb., 10c; 1 lb., 30c; 5 lbs., $1.25.

90. Big Profit Pole Bean. The Big Profit Pole Bean is fully two weeks earlier than any Pole Lima. The beans are large, thick and husky, and are borne four or five in a pod. The vines are strong and vigorous. Pkt., 25c; 50 cts., 1 lb., $1.25; 10 lb., $10.00; 25 lbs., $25.00; 50 lbs., $50.00.

95. Golden Cluster Wax. The vines are large, vigorous, and hardy; pods six to eight inches long, borne in clusters, color, yellow to white; broad, thick, fleshy and of the very best quality. Seed, oval, dull white in color. Pkt., 5c; 1/2 lb., 10c; 1 lb., 30c; 5 lbs., $1.00.

98. Horticultural Pole, or Speckled Cranberry. Vines vigorous with large, light green, medium-sized, smooth, light green pods borne in clusters; are long, very thick, dark green; seed large, flat, greenish-white. Pkt., 5c; 1/2 lb., 10c; 1 lb., 25c; 5 lbs., $1.00; 10 lbs., $1.50; 25 lbs., $4.25; 50 lbs., $8.00.

105. King of the Garden Lima. The beans are very vigorous and prolific. They are large in size, filled with four or five large Beans of very fine quality. The beans are easily shelled and of handsome appearance. A favorite with market gardeners. Pkt., 5c; 1/2 lb., 10c; 1 lb., 25c; 5 lbs., $1.00; 10 lbs., $1.50; 25 lbs., $4.25; 50 lbs., $8.00.

107. Large Green Seeded Pole Lima. This new variety is sometimes called the "most perfect Pole Lima' on account of several very distinctive features. The vines are strong and vigorous, and produce a great number of pods. The pods generally filled with four large, broad beans, having a more nearly perfect shape, than any other Pole Lima. Especially valuable for canning purposes. Pkt., 5c; 1/2 lb., 10c; 1 lb., 25c; 5 lbs., $1.00; 10 lbs., $1.50; 25 lbs., $4.25; 50 lbs., $8.00.

110. Large White Lima. Large, long, growing vigorous but slender; leaves medium sized, smooth, light green; pods borne in clusters; are long, broad, very thick, dark green; seed large, flat, greenish-white. Pkt., 5c; 1/2 lb., 10c; 1 lb., 25c; 5 lbs., $1.00; 10 lbs., $1.50; 25 lbs., $4.25; 50 lbs., $8.00.

115. Lazy Wife. Easy to obtain a supply. One of the best varieties for snaps of the late green-podded Pole Beans. The pods grow in large clusters, are five to seven inches long, broad, thick, fleshy, and entirely stringless. They have a rich, buttery flavor. The dry Beans, which are white, are fine for Winter use. Pkt., 5c; 1/4 lb., 10c; 1 lb., 25c; 5 lbs., $1.25.

120. Scarlet Runner. A brilliant scarlet, and the beans are of an excellent quality, either when shelled or in a dry state. Large pkt., 10c; 1/2 lb., 15c; 1 lb., 40c; $1.75.

122. White Dutch Runner. Identical with Scarlet Runner Bean except in color of blossom, which is white. Very rapid in growth. Large pkt., 10c; 1/4 lb., 15c; 1 lb., 40c; 5 lbs., $1.50; 10 lbs., $3.00; 25 lbs., $8.00.

125. White Creaseback. A fine, early, green-podded Pole Bean of rapid growth and very productive. The pods grow in clusters and are from five to six inches in length, perfectly round and deeply creased. They are very fleshy, stringless and of the best quality. The beans are white and are excellent shelled. Pkt., 5c; 1/4 lb., 10c; 1 lb., 25c; 5 lbs., $1.00; 10 lbs., $1.50; 25 lbs., $4.25; 50 lbs., $8.00.

DWARF OR BUSH LIMA VARIETIES.

No garden is complete without Dwarf Limas. Lima Beans weigh 50 lbs. per bushel.

130. Burpee's. The bushes are 18 to 20 inches high, of stout, erect growth, branch freely, very prolific, bearing large, beautiful pods well filled with large Beans of the same size and delicious flavor as the pole Lima variety. Pkt., 5c; 1/4 lb., 10c; 1 lb., 25c; 5 lbs., $1.00; 10 lbs., $1.50; 25 lbs., $4.25; 50 lbs., $8.00.

135. Deer's. The pods are short but thick, containing three to four very thick, short and long Bean pods, closely packed. This variety is later than Burpee's but the plants are very productive and the Beans are easily shelled and of delicious flavor. The year is not erect, but tend to brush along and bear pods about three feet. Pkt., 5c; 1/4 lb., 10c; 1 lb., 25c; 5 lbs., $1.00; 10 lbs., $1.50; 25 lbs., $4.25; 50 lbs., $8.00.

140. Henderson's or Sieva. Squirrs no support. Very early and productive. The Leas have the true Lima flavor, rich, buttery and tender. These are two-weeks earlier than most Pole Limas. Pkt., 5c; 1/4 lb., 10c; 1 lb., 25c; 5 lbs., $1.00; 10 lbs., $1.50; 25 lbs., $4.25; 50 lbs., $8.00.

145. New Wonder Bush Lima. Of more bushy character than other varieties, the pods being borne nearer the stalk. It is very productive and in quality and flavor is unsurpassed. Try this Bean. Pkt., 5c; 1/4 lb., 10c; 1 lb., 25c; 5 lbs., $1.00; 10 lbs., $1.50; 25 lbs., $4.25; 50 lbs., $8.00.

Prices on Beans are prepaid only on packets and quarter pound lots. Postage rates on page one.
FIELD BEANS

150. California Wonder or Improved Tree Bean.
A Wonderful, Productive, White Field Bean.
This is without question the heaviest yielding Bean known.
It is not a garden variety, but belongs to the class of field Beans,
the seed of which resembles the well known “Navy” Bean. On account
of its snowy whiteness and its uniformly small size, the California
Wonder commands the highest price in all markets.
Our seed is carefully selected and is pure stock, which is seldom found
in Navy Beans. Mixed stock always sells at from 23 to 30 per cent
less than straight stock. A few cents extra expended on the seed
means many dollars in the crop. The plants grow upright and
bear the pods well up from the ground, thus keeping them away
from the soil and making them more easily gathered. This variety
is giving the best of satisfaction to our customers as is evidenced
by the many letters of commendation which we have received.
Thirty pounds of California Wonder Beans will plant an acre.
Price, pkt., 5C; 5 lb., 10C; 10 lb., 20C; 5 lbs., 75C; 10 lbs., $1.35; 25 lbs.,
$4.75; 50 lbs., $8.45; 100 lbs., $9.00.

SEVEN POINTS OF MERIT of the CALIFORNIA WONDER BEAN.

155. Brown or Swedish. There is a large call for these beans and although we have given them small space, have sold large quantities.
It is a fine field variety and the demand is usually good and the price high.
The Beans are brown in color, medium size and excellent for cooking.
Price, pkt., 5C; | lb., 10C; 10 lb., 50C; 50 lb., $2.50; less extra cost, | lb., seed, $3.00.

For farmers to lose $1.00 to $2.00 on an acre when they can gain from
one to two thousand per cent on the investment by planting
pure seed?

160. Choice Navy. Our stock of this well known variety has been carefully
selected and cleaned and will be found superior to Beans commonly offered as “Navy Stock.”
Price, pkt., 5C; | lb., 10C; 10 lb., 20C; 5 lbs., 75C; 10 lbs., $1.30; 25 lbs., $4.40; 50 lbs., $8.45; 100 lbs., $8.75.

162. White Taypey Bean. A white shell Bean more prolific than the Navy This is a native of the and is well adapted to a dry climate; it is quick maturing and will endure drought better than
varieties. It cooks tender and the flavor is delicious. Taypey Beans are immune to the diseases that decimate other Beans.
Price, pkt., 5C; | lb., 10C; 10 lb., 20C; 5 lbs., 75C. 10C.

165. Red Kidney. A very fine variety for baking. Price, pkt., 5C; | lb., 10C;
10 lb., 20C; 5 lbs., 75C.

While much larger quantities of white Beans of the Navy type are used than
of other varieties, those who know about the Boston Yellow Eye prefer
them to any other Bean for cooking, as they possess a richness and flavor known to
no other variety. As a price, they have no superior, and for cooking in a dry state,
no equal. Any surplus may grow above requirements may be easily sold at
from $1 to $2 a bushel above the price of any white Beans, when their quality
is known. We strongly recommend the planting of the Boston Yellow Eye. Once
used, they are always wanted.
Price, pkt., 5C; | lb., 10C; 10 lb., 20C; 5 lbs., 75C.

Cultivation. Next in importance to pure seed is the selection of the soil in
which they are to grow. It is true that Beans thrive on most all soils but greater results are gained by the liberal use of fertilizer or planting in light,
rich, well-drained soils. Beans are extremely sensitive to frost and moisture. It is useless to plant them before all danger of frost is past and the ground is warm. Sow the seed in drills, two or four to eight inches apart in the row. They should be frequently cultivated up to the time of blossoming, but this should never be done when the pods are full, except with rain or dew, as it will be sure to injure them. If disturbed while in bloom, it will prevent their setting well.

Marketing. After the Beans are harvested and threshed, run them through a threshing of any size, a sifting of the screen mill to take out all the broken Beans, pods, and stems. Hand picking will add considerably to their value, taking out all dark or discolored Beans.
If a canning factory be near, they will gladly pay a premium for clean, uniform, and properly dried Beans as it is far less desirable to ship the Beans to a reliable commission house in the larger cities, or if that is not convenient, the country merchant will be willing to buy them in thousands. The raising of Beans will reward the grower on account of the price to be realized. On the Minneapolis Produce Exchange in October last No. 1 Navy Beans sold at $2.50 to $4.00 per bushel.

Order Early. It will be a great convenience, both to our customers and to our
men, if seed orders are sent as early as possible to fill orders the
same day received, but during the rush season this is not always possible. Early orders, also, are filled from the choice of our stocks—thus the double advantage of sending in your order as soon after receipt of this catalogue as possible.

Please note prices on Beans are prepaid only on packets and quarter pound lots.
Postage rates on larger quantities given on page one.

Stringless Green Pod Beans. See page 20.
Northrup, King & Co., Seedsmen, Minneapolis, Minn.

BEET

Culture. Sow seed one inch deep in rows 15 to 24 inches apart in fertile, well pulverized soil, using 5 to 6 lbs. seed per acre. An ounce will sow 50 feet of drill.

Cultivation should begin almost before the Beets are up and continue until the plants shade the ground. When a few inches high, thin to six or eight inches apart in the row.

175. Northrup, King & Co.'s Sterling Beet. We offer our customers a decided novelty. It is as early as Eclipse, with perfectly globe-shaped, with a single tap root, and of the finest quality. It is a splendid keeper, is not excelled in yielding qualities by any other sort, is exceedingly tender, fine and sweet and is unequaled for table use.

Market gardeners will find our Sterling a very profitable variety to grow, as no other sort approaches it in attractiveness. Exposed on the market by the side of other Beets, it at once catches the eye of the customer and completely dwarfs in appearance all other sorts. Large Pkt., 5c; oz., 15c; lb., $1.25.

180. Northrup, King & Co.'s Market Gardener's. (Sold only in sealed packages.) This is the ideal Beet for the market gardeners and home garden. It is very symmetrical, with small tap root and but few fibrous roots; color outside is deep blood red; inside, layers of blood red and light red alternately. When cooked they are a beautiful dark red throughout, fine grained and unsurpassed in quality. It continues to grow until late in the fall, attaining a large size and making a good selling and eating Beet for winter. One sowing only is necessary to produce early Beets for market and main crop for winter use. Pkt., 5c; oz., 15c; lb., 50c; lb., $1.25.

185. Crimson Globe. A very handsome variety of medium size, nearly globe-shaped, free from roots, leaving the surface smooth. The flesh is a rich, blood red of the best quality, sweet and tender, never stringy. Pkt., 5c; oz., 15c; lb., 50c; lb., $1.25.

190. Crosby's Egyptian. An improvement on Extra Early Egyptian. It is as early, but of more desirable shape, color and quality. It is very sweet and tender; a most valuable sort for early market as it is ready before any other Beet of equal quality. Pkt., 5c; oz., 20c; lb., 55c; lb., $1.25.

195. Detroit Dark Red. Roots globular; smooth with small tap root; skin blood red; flesh dark red, zoned with lighter shade; tender and sweet. This is a splendid variety for canning. The tops are upright in growth; the leaves are dark green shaded with red. See illustration on page 24. Pkt., 5c; oz., 20c; lb., 50c; lb., $1.25.

200. Early Blood Turnip. Roots turnip-shaped, deep crimson, tender and sweet. This is an excellent market and home garden sort for summer and autumn use, a very good cropper. Pkt., 5c; oz., 15c; lb., 40c; lb., $1.25.

202. Early Model. A splendid variety for table use. It is medium in size, early in maturity, being ready a few days before Crimson Globe. The roots of Early Model are of nice size and grow uniformly perfect, nearly globe-shaped with a slim, smooth tap-root. Leaves are small, colored dark crimson. The color and quality are excellent, flesh being tender, sweet, rich deep crimson and fine flavor. Makes a splendid selling Beet on account of its fine appearance. Pkt., 5c; oz., 50c; lb., 50c; lb., $1.25.

205. Eclipse. Makes rapid growth, top small, quality fine, larger than Egyptian, but not as deep a red in color. This is an especially desirable sort for the home garden and bunching. The roots are smooth and round with a small top root and collar. The flesh is very sweet, crisp and tender, especially when young. Pkt., 5c; oz., 15c; lb., 40c; lb., $1.25.

Fertilizers. For Beets of quality you must have a mellow, fertile soil. Use our Sterling Fertilizer No. 2 to supply the necessary plant foods for this crop. See page 162 for description and prices.

An Attractive Variety of Splendid Quality.

Crosby's Egyptian Beet.

210. Edmond's Improved Blood Turnip. A handsome, clean turnip-shaped blood Beet. Skin and flesh are of a deep blood red, sweet and tender in quality, and unsurpassed for solidity and keeping purposes. The roots grow regular and are of right marketable size. Tops are small, allowing them to be grown close together. See illustration on page 24. Pkt., 5c; oz., 50c; lb., 50c; lb., $1.25.

215. Extra Early Egyptian Beet. The earliest turnip-shaped, small, symmetrical, deep blood color. This is a valuable sort for forcing, and is also excellent for the first early crop outdoors. The roots are a rich color, moderately thick, a trifle rounded on top and flatter on the bottom. The flesh is dark red; zoned lighter, firm, crisp and tender. Pkt., 5c; oz., 15c; lb., 40c; lb., $1.25.
BEET

225. Half Long Blood. This is rapidly becoming a very popular sort and will probably produce more bushels from a given area than any other sort, as it does not occupy so much space in the row as the turnip-shaped varieties. Pkt. 5c; oz., 15c; 1 lb., 40c; 10 lb., $1.25.

230. Improved Long Blood. One of the best and most popular table Beets, especially for autumn and winter use. Our seed has been grown from selected roots, and we can recommend it as a superior stock. Pkt., 5c; oz., 15c; 1 lb., 40c; lb., $1.25.

235. Swiss Chard or Spinach Beet. This variety does not produce an edible root like the regular garden Beet, but is highly esteemed for the broad, white leaf stalks and midribs which are cooked and served in the same manner as asparagus, making a most delicious vegetable. The leaves are also cooked like spinach and considered equally palatable. Two distinct dishes may thus be grown from one plant at the same time. Pkt., 5c; oz., 15c; 1 lb., 40c; lb., $1.25.

238. Giant Lucullus Swiss Chard. The largest and best variety of Swiss Chard. Seed sown early in the Spring will produce plants quickly from which the thick light-colored mid-ribs of the leaves may be cut down to the ground. New growth will quickly succeed it which may in turn be gathered. If the plants are allowed to grow on, an abundance of large curly leaves may be obtained, which make most excellent greens. No garden is complete without Swiss Chard, and the grower will be amply rewarded by giving it at least a small space. Pkt., 5c; oz., 15c; 1/2 lb., 50c; lb., $1.50.

Book on Cabbage, Cauliflower and Allied Vegetables. By C. L. Allen. Gives complete instructions from seed time until harvest. Price, 50c, (postpaid, 55c). We can supply books on almost all agricultural subjects. Write us for prices.

Note. All vegetable and flower seeds sent prepaid except where noted.

240. Improved Dwarf. The stem which usually grows from 20 inches to 2 feet in height, is covered with "miniature cabbages" which may be boiled like cabbage or cooked in cream like cauliflower. They are by all means the most delicious and delicately flavored of the cabbage family. On this variety the heads grow very closely and its quality is the finest. Pkt., 5c; oz., 15c; 1/2 lb., 40c; lb., $1.25.

242. Dalkeith or Perfection. Plants are of dwarf growth and stems are thickly set with large, solid sprouts. This variety is very hardy and even during quite severe weather, the plants maintain their sprouts; in fact the flavor and quality is much improved by frost. Pkt., 5c; oz., 15c; 1/2 lb., 50c; lb., $1.50.

BRUSSELS SPROUTS

Brussels Sprouts are highly valued in all European countries, but are not generally appreciated here. Thousands and thousands of native born Americans have never tried them and do not know what palatable and nutritious vegetables they are. They should be in every garden. Cultivation same as for early or late cabbage, depending on whether an early or late crop is desired, with the exception that the seed should be sown a few days earlier and when the plants are planted out they should be set 15 in. apart in rows 2 ft. apart. 1 oz. will sow 200 ft. of drill.

244. Snow White. Culture same as for late cauliflower. Forms heads very much like a cauliflower, but is much harder, and gives excellent results in cool localities. It is not so valuable as the cauliflower in warm or dry climates, nor of such good quality. Pkt., 5c; oz., 15c; 1/2 lb., $1.00; lb., $3.50.
SUGAR BEETS
For Sugar Making.

SUGAR BEETS are now extensively grown in many sections of the country where Sugar Beet factories are located and the large yields per acre and the price secured for the crop make them very valuable. Sugar Beets may also be used for stock feeding as they contain 12 to 15 per cent of sugar in addition to other nines. The roots are grown in the interval between harvesting the large sugar beet variety, and the yield under favorable conditions is that of double. The roots are pliant and may be shelled out except that they should be thinned out to 8 to 10 inches in the row. The yield of the best strains of Sugar Beet, and the yield under equally favorable conditions of the crop, can be high and can be sold at less expense than many other root crops. We are certain that every one who plants this variety and grows it with care will be much pleased. Every farmer should try it.

275. Giant Feeding Sugar Beet or Half Sugar White Mangel. This magnificent Sugar Beet while giving near roots as large as those of Mangel, supplies a food of very much higher nutritive value, the roots for feeding purposes being really more valuable, pound for pound, than any other root crop. This variety is especially valuable for feeding stock as they give a feed of much greater nutritive value than mangels.

276. Jaensch's Victrix. Undoubtedly the most highly recommended variety for stock feeding. Roots of medium size, white skin with tinge of gray, half long and very uniform in size and shape. Flesh white and very rich in sugar. Pkt., 280.

277. Royal Giant Sugar Beet or Half Sugar Rose Mangel. Very similar to Giant Feeding vegetable except in color. The skin is bright rose above ground and white below. Flesh white, tinged with rose. Roots grow half out of the ground and are thus easily harvested. Pkt., 5c; oz., 10c; ½ lb., 15c; lb., 25c. By express or freight, 10 lbs. @ 35c per lb.

278. Sugar Beet for Stock Feeding. We can furnish seed of Sugar Beet, which will give a large yield and tonnage. Oz., 5c; ½ lb., 15c; lb., 45c. By express or freight, 10 lbs. @ 30c per lb.

As in the case of Mangels, the best seed obtainable, regardless of the price, is the cheapest in the end. Sugar Beet seed is not a high priced article and the expense of seedling an acre of land is very small when compared to the value of the crop. A maximum yield of 15 to 20 tons an acre with the best varieties is possible, and the lower priced seed may produce hardly enough to pay the cost of cultivation and handling.

The time of planting should be determined by the condition of the soil, the locality and season. Sandy soil becomes warm and dry much earlier than heavy loam. The planting should also have a tendency to increase the warmth of the soil. Do not plant Sugar Beets until the soil is warm enough to germinate corn. When the soil is too cold, seed should be planted deeper to accommodate the slower growth of the plant. If the soil is too dry and the surface crust is formed on the surface when a scant seeding will not break through in the plants' effort to reach sunlight, but collectively they will aid each other in breaking the surface. The depth of planting must also be determined by local conditions of the soil, season, drought, and distance between rows. Shallow planting, say one-half to one inch, will produce satisfactory results. The distance between rows will depend somewhat on the soil and recipe for each variety. In general, deep planting, say 2 to 2 inches between rows, using a 4 to 6-row planter for the purpose.

Cultivation should commence immediately after planting by following the rows indicated by the press wheel. Before the plants appear, cross rows with a light, hand weeder, made of driving long handles through a board, and dug as a narrow, which will break the surface crust and maintain in earth mulch to prevent the escape of soil moisture. This process may be repeated two or three times with excellent results.
MANGEL WURZEL
For Stock Feeding.

We have our seed grown under contract in England by experts, as there is no other place in the world where Mangel and Ruta Baga are produced to such perfection. Mangel and Ruta Baga seed can be grown in the south of France for less than one-half the price we pay for our seed, but as it cannot be depended upon to give satisfaction we do not handle it.

Culture. Sow 6 pounds to the acre in May or June, in rows three feet apart, and thin to nine inches in the row. Cultivate frequently with horse tools.

(Sold only in sealed bags.)

Farmers and stock raisers of the United States do not appreciate so fully the value of Mangels for feeding cattle, hogs, sheep, etc. as do the farmers of Europe. In Germany, Great Britain and other European countries, it is the exception rather than the rule where Mangels are not grown on a large scale on every farm. The immense yield which may be secured from an acre with very little expense either for material or labor, makes the Mangel crop one of the most profitable on the farm. 35 to 40 tons of roots an acre is not an unusual yield, some specimens weigh 20 to 35 lbs. each. Where properly cultivated, seeded and harvested the cost of growing a bushel of our Improved Mammoth Long Red Mangel should not exceed $5. When fed in combination with grain they are worth almost as much, pound for pound, as the grain. This statement may seem absurd, but experience has proved that Mangels, so aid digestion and assimilation, by keeping the animals in a healthy condition, that they increase the feeding value of other foods consumed, beside the nutrients the roots contain.

Our stock of Improved Mammoth Long Red Mangel is a selection and the seed is especially grown for us in Europe. The roots are very large, uniformly straight and well formed; color, deep red; roots, straight; tops, small.

Every farmer ought to put in at least an acre of Mangels this coming season, 5 or 10 acres will be much better. Pkt., 5c; oz., 10c; 1 lb., 15c; lb., 45c. By express or freight at purchaser's expense, 10 lbs. @ 36c per lb.
MANGEL WURZEL
For Stock Feeding.

255. Northrup, King & Co.'s Improved Golden Tankard. (Sold only in sealed bags.) We have for years, insisted that this was the best Mangels grown and each season strengthens us in the position we took when it was a comparative.

The flesh is firm and solid and a rich golden yellow in color. On account of its shape enormous crops are grown, and it is easily lifted from the ground. Pkt., 5c or 10c; 1 lb., 15c; 2 lb., 25c. By express or freight, at purchaser’s expense, 10 lbs. @ 25c per lb.

256. Crimson Tankard. In appearance it closely resembles the favorite—Golden Tankard. It is adapted to all soils, is easily lifted from the ground and is a very productive sort. Pkt., 5c or 10c; 1/2 lb., 15c; lb., 50c. By express or freight, 10 lbs. @ 35c per lb.

258. Danish Sludstrup. The Danish Government encourages the growing of root crops by offering certificates of merit to growers who select and produce sorts which are of distinctive value. Sludstrup is considered the best of all Mangels having been awarded first class certificate. In color it is reddish-yellow and of a distinct type. It contains the largest per cent of nutriment found in any sort. It is very hardy, grows well above ground and is easily pulled. Pkt., 5c or 10c; 1/2 lb., 15c; lb., 50c. By express or freight, 10 lbs. @ 35c per lb.

265. Mammoth Golden Giant. Very large. Remarkably even in shape, of vigorous growth; has a fine neck and a very smooth skin. Flesh white, firm and sweet, much liked by cattle. Easily lifted from the ground, producing enormous crops. Excellent keeper, yields 40 to 60 tons an acre. Pkt., 5c or 10c; 1/2 lb., 15c; lb., 50c. By express or freight, at purchaser’s expense, 10 lbs. @ 35c per lb.

260. Giant Red Eckendorf. A very popular variety grown in European countries where root crops are grown on a very large scale. It has also proved very satisfactory in the United States whenever it has been tried. The roots are smooth, long and cylindrical in shape, very much like the tankard mangels. They are very heavy, weighing up to 15 and 20 pounds each. The flesh is firm, crisp and solid, white in color and of high feeding value. This variety is easily harvested, a large proportion growing above ground. Pkt., 5c or 10c; 1/2 lb., 15c; lb., 40c. By express or freight, at purchaser’s expense, 10 lbs. @ 35c per lb.

262. Giant Yellow Eckendorf. The same as the previous variety except the skin is yellow. Very desirable in all respects. Pkt., 5c or 10c; 1/2 lb., 15c; lb., 50c. By express or freight, at purchaser’s expense, 10 lbs. @ 35c per lb.

270. Yellow Globe. It has very small tops and very few leaves, leaf stalks and blade green; root medium sized, globe-shaped, having a small tap and few side roots; skin, deep orange-yellow in color; flesh white and of excellent quality. The root grows almost entire above ground, making it well adapted to shallow soil and very easy to harvest. Oz., 5c or 10c; 1/2 lb., 15c; lb., 50c. By express or freight, at purchaser’s expense, 10 lbs. @ 35c per lb.

Seeding and Cultivation.

Where Mangels are extensively grown, the seed should be sown with a machine. Small fields may be sown with a hand drill, which will do good work and is very satisfactory. Do not crowd the rows because much of the root grows above the surface and plenty of space should be allowed for a horse and cultivator. Three feet apart is about right.

Freezing injures Beet plants. Therefore, seed should not be sown until the ground is warm and the weather fully settled, say about corn planting time.

The quantity of seed required per acre will vary somewhat with the variety. It pays to be generous with the seed and insure a good stand of plants. Shallow planting is desirable because the seed germinates more quickly and a larger proportion will make vigorous plants than when planted deeply. One-half to one inch of well packed earth is sufficient covering for Beet seed, when there is a good supply of moisture in the sub-soil. Deeper planting will be required on sand lands or when the soil is dry. Cultivation should begin within a day or two from planting. Thin the plants to nine inches apart in the row.
CABBAGE
ARRANGED IN ORDER OF EARLINESS.

Culture for Early Cabbage. Seed of the early varieties should be sown 1/2 of an inch deep in a greenhouse, hot-bed, or in boxes in the house, about 6 weeks before the plants are needed for planting out. If, when the second leaves appear, the plants can be transplanted, spacing them 3 inches apart, better and more hardy plants will be obtained. As soon as the soil can be worked in the spring the plants should be removed to the open field and set in rows 2 feet apart each way. Cultivate occasionally to keep out weeds and preserve the moisture in the soil until the plants shade the ground. One-half lb. seed will produce plants for one acre. See page 30.

Culture for Late Cabbage. The seed may be sown in rows 1 foot apart or broadcast in the garden, about the middle of May, and the plants set in the field the latter part of June, or it may be planted in hills 40 inches apart, 4 to 5 seeds to the hill, in the field where the cabbages are to grow, thinning to one plant in a hill when the plants are 3 to 4 inches high. Cultivation must begin as soon as the plants are set in the field, or as soon as seed sown in the field is up and continued as long as it is possible to get through with a horse cultivator without injury to the plants. Where the seed is sown in the field, whether it be in rows or in hills, it should be covered with 1/2 of an inch of soil and this soil firmly well to insure rapid germination. One-half lb. seed sown in a bed will produce plants for one acre. Cabbage Plants on page 100.

"First in Head, First in Market, First in the Hearts of Gardeners."

Sold only in Sealed Packages.

We introduce this remarkable Cabbage twenty-two years ago. It met with so hearty a reception from every one who grew it that it seemed as though everyone who tried it must have written a letter to make known their satisfaction. Every year we receive a great many letters of praise and congratulation regarding the Washington Wakefield Cabbage. No other Cabbage of which we have knowledge has aroused such enthusiasm among Cabbage growers as has our Washington Wakefield. It has the same compactness of the other Washington Cabbages, the heads being conical with a rounded or blunt point. It is, however, far superior to other strains of Washington Cabbage, having nearly double the size and of better quality, and at the same time is fully as early. It has few outer leaves, permitting close planting, so that more heads can be grown to the acre than with other sorts. Large pkt., 10c; oz., 50c; lb., 90c; lb., $2.75.

325. Early Jersey Wakefield. Heads are very hard, compact, solid and conical in shape. Few outside leaves. We do not admit that our stock has any superior, except Northrup, King & Co.'s Washington Wakefield Cabbage. Pkt., 5c; oz., 30c; lb., 90c; lb., $2.75.

310. Charleston Wakefield. Very similar to the Jersey Wakefield, but a few days later and half as large again. Not quite as pointed as the Jersey. Pkt., 5c; oz., 30c; lb., 90c; lb., $2.75.

345. Express. A very early variety forming small oval heads, with a very little thick outer leaf stock, point and slightly later than the Early Jersey Wakefield. A fine shipping sort. Pkt., 5c; oz., 15c; lb., 45c; lb., $1.50.

340. Early Winnigstard. Very early. The leaves are dark green and very tightly folded, making it the hardest of any Early Cabbage. The leaves suffer less from the Cabbage worm than most other sorts. Heads are regular, compact and keep well both Summer and Winter. The seed has been especially selected. Pkt., 5c; oz., 15c; lb., 50c; lb., $1.50.

298. Copenhagen Market. A new early variety, which will very probably set the standard of excellence. It is the finest large, round-headed, early Cabbage in cultivation. It is further desirable as an account of the remarkable characteristics of maturing the heads all at the same time, enabling the grower to gather his crop with less expense and permitting the cleaning of the land at the first cutting. The heads average about ten pounds each in weight, are hard and solid with small core. The quality is extra fine and sweet. It matures as early as the Wakefields and will yield more to the acre in weight. It is a short stemmed variety, the heads nearly resting on the ground. The leaves are light green, rather small, smooth-shaped and tightly folded, making it possible to set them close together in the field. Pkt., 10c; oz., 40c; lb., 95c; lb., $2.50.

299. Glory of Enkhuizen. A variety of recent introduction from Holland. It is a valuable sort on account of its earliness, large size and fine keeping quality. The heads are of nice size for market, weighing about 9 to 11 pounds each, globe-shaped and handsome dark green in color. For an early sort, the heads are unusually firm and solid. The leaves are fine ribbed, tender and of excellent quality. The outer leaves set close, permitting planting of more heads to the acre, thus increasing the yield. This is not only valuable as an early variety, but as it grows large it may be profitably raised for the fall market. Pkt., 30c; 1 oz., 90c; lb., $1.40.

305. Allhead Early. Larger than any other early Cabbage. Heads, large, hearted solid and early growth. An all-the-year-round cabbage. We consider this one of the best second-early sorts on our list. Pkt., 5c; oz., 30c; lb., 90c; lb., $2.50.

330. Early Spring. A most popular variety on account of its earliness. The heads are very solid and shapely, and as it forms quickly, it may be marketed at a very early stage of its growth, enabling the grower to realize fancy prices. The quality is excellent, tender and of fine flavor. Prices, pks., 5c; oz., 25c; lb., 45c; lb., $2.50.

335. Early Summer. Deservedly popular with market gardeners throughout the country. It forms large, solid, round, flattened, compact heads of excellent quality, tender and sweet. The heads average over double the size of the Jersey Wakefield, weighing eight to ten pounds each, while it matures only ten or twelve days later. Pkt., 5c; oz., 30c; lb., 85c; lb., $2.75.

385. All Seasons. The All Seasons Cabbages are one of the best and surest cabbages to grow. It is a little later than Early Summer, but very much larger, (about double the size) and for the market gardener one of the most useful, marketable and profitable Cabbages to grow. It is perhaps the safest variety for the amateur to plant as it does well at all seasons and is a surecropper. The heads are dark blue in color and being tender and fine keeping are excel lent for fall and winter use as well as during the summer. Pkt., 5c; oz., 30c; lb., 85c; lb., $2.50.

347. Fottler's Improved Brunswick. An ideal sort for the home gardener who wishes a variety of the drumhead type. Very desirable for the home gardener on account of its dwarf growth and the yield of few outer leaves. Head, round, flat, solid and of excellent quality. Pkt., 5c; oz., 25c; lb., 75c; lb., $2.50.

Northrup, King & Co.'s Premium Late Flat Dutch Cabbage.
CABBAGE

300. Northrup, King & Co.'s Discovery.
Sold only in Sealed Packages.
This valuable Cabbage fills a very distinct field as the earliest flat heading sort. Truckers generally prefer flat heading Cabbages to the pointed sorts, but up to this time, none have been developed that are as early as the Wakefields. Our Discovery Cabbage is as early as the Wakefields, in fact it might properly be termed a Flat Wakefield, for it has the thick, heavy leaves of the Wakefields. Here, however, the resemblance ceases as the head is distinctly flat and of compact growth. This enables the grower to plant closely, and he can secure a large crop from an acre because it is so reliable about heading. The heads are, as a rule, quite as large as those of the Early Spring, and enough earlier in our judgment to make it more profitable to gardeners, besides being, we think, less subject to disease. Large pkt., 10c; oz., 30c; 34 lb., 30c; lb., $3.00.

370. Northrup, King & Co.'s Harvest Home. (Sold only in sealed packages.) We have yet to see the Cabbage of equal quality that will yield as large a weight from a given area as the Harvest Home. Fifteen tons an acre is not an unusual yield and greater results have been obtained under favorable conditions. We have yet to see the Cabbage that will equal it in reliability of heading, uniformity of size and solidity of head. We unhesitatingly recommend it to any one desiring the best Cabbage for fall and winter keeping or kraut making. Pkt., 10c; oz., 30c; 34 lb., 30c; lb., $3.00.

375. Northrup, King & Co.'s Premium Late Flat Dutch. (Sold only in sealed packages.) A low growing variety, heads large, bluish-green, round, solid, broad and flat on top; an excellent fall and winter variety, and a good keeper. It is a sure header. Our stock has been grown from carefully selected heads, and we consider it superior to any other strain of Flat Dutch Cabbage on the market. Pkt., 5c; oz., 25c; 34 lb., 75c; lb., $3.50.

380. Late Flat Dutch. (Regular Strain.) Pkt., 5c; oz., 25c; 34 lb., 75c; lb., $2.25.

400. The Volga. The quickest growing, large late variety. Uniform in growth, head hard and solid. It is two or three weeks earlier than other large kinds. The plant is nearly all head having few outside leaves. The heads are nearly as round as a ball and as hard and solid as Danish Ballhead, while they are much larger and heavier, often weighing 15 lbs. each.

The quality of this Cabbage is very fine both for cooking and for kraut. It will keep perfectly all winter if kept cool.

If the plant is set out early they will head in July and August and can be used as a summer and fall variety. We are sure this Cabbage will prove a most profitable one to all who use it. The plant is so compact that they can be set out 15x3 ft. and will produce enormous crops on good, rich land and fair crops on land that would not produce a ton to the acre of some other varieties. Pkt., 10c; oz., 30c; 34 lb., 30c; lb., $2.50.

401. Autumn King. Large solid heads, similar to Flat Dutch, with ruffled outer leaves. Needs long growing season. Pkt., 10c; oz., 30c; 34 lb., 90c; lb., $3.00.

See page 100 for Cabbage Plants.

388. Early Dwarf Blood Red. Earlier than Rock Red, but not quite so large. The heads are hard, keep well and are of excellent quality. In color they are deep, blood red and are considered fine for pickling. Pkt., 5c; oz., 25c; 34 lb., 30c; lb., $2.50.

355. Rock Red. The best largest and surest heading red Cabbage. Used mostly for pickling. The plant is large, with several spreading leaves. The head is large, round, very solid and of deep red color, averaging from ten to twelve pounds in weight. Pkt., 5c; oz., 30c; 34 lb., 30c; lb., $2.75.

348. Improved American Drumhead Savoy. The best variety of Savoy or crumpled leaf Cabbage. The plant is vigorous, with short stem, has densely crumpled leaves and when touched by frost is sweet, delicate and delicious. The head is large and very solid. Pkt., 5c; oz., 25c; 34 lb., 50c; lb., $2.50.

349. Celery or Chinese Cabbage. Pe Tsai. Improved Chinese Cabbage. It is very easily grown and does well in nearly all parts of the country. It should be grown like a late Cabbage, planting in July, as early plantings run quickly to seed. The seed is sown in drills 16 to 20 inches apart and the seedlings trimmed two or three times. The full grown plant somewhat resembles a Cos Lettuce in appearance. It has a mild flavor and may be eaten raw or cooked. Boiled and seasoned with butter, it is especially delectable. Pkt., 5c; oz., 25c; 34 lb., 75c; lb., $2.50.
CABBAGE

390. Northrup, King & Co.'s Holland.

Danish Grown Stock.

Most remarkable late Cabbage yet produced, heads hard and solid—fine grained and tender. Entirely distinct in color. Very finest short stemmed type. (Sold only in sealed packages.) In some important particulars this is the most remarkable Cabbage yet produced. In fact, it well illustrates the truth that "merit will win," in that while it was introduced only a few years ago, it has already become the favorite sort with those who have had the true stock.

This is a very hardy variety and a sure leader, extra solid and firm. The heads are of medium size and average about $8 pounds in weight; they are the largest for the size of head ever introduced. They stand shipment better than other late sorts. In quality they have been superior not only for immediate use, but even when kept until Spring, they come out as firm and sound as when put away; in the springtime no Cabbage will outclass them.

The plants are vigorous and hardy; our strain produces strong stems and deep heads, as shown in the illustration. The leaves are rather upright in habit, large, thick and smooth with a distinct color.

Holland Cabbage is unsurpassed for shipping to distant points or late Spring use. There is no question as to the value of this Cabbage, the only point is where to obtain the best seed. We offer genuine Danish Grown Stock which was grown especially for us in Denmark. Repeated trials have proved the merit of this strain.

Pkt., 10c; oz., 25c; ½ lb., 75c; lb., $2.50.

315. Danish Ballhead.

Favorite for Winter Market.

This winter variety is especially desired on account of its great solidity and its keeping qualities. It is now one of the most largely grown varieties for the winter market in this country. The heads weigh more than other sorts of equal size. They are round, as a ball, solid, fine grained, with few outside leaves; crisp tender, and sweet, and unsurpassed for boiling, sauerkraut, etc. This variety has been selected and perfected for over fifty years by the Danish gardeners, who prize it so highly that they grow it almost exclusively for Winter Cabbage and annually export large quantities of it. It grows well on all soils and under most conditions, withstands hot, dry weather, and does not rot in wet seasons.

Pkt., 5c; oz., 25c; ½ lb., 75c; lb., $2.50.

320. Danish Roundhead.

Very Vigorous, Splendid Quality.

An earlier, shorter stemmed, improved strain of the Danish Ballhead Cabbage. The heads are hard, very solid and mature about two weeks before the Ballhead. Also averaging a little larger and heavier.

The inner leaves are blanched almost pure white, are of sweet flavor, crisp and tender. It is less liable to blight and shows vigorous growth even in the hot Summer.

Pkt., 5c; oz., 25c; ½ lb., 75c; lb., $2.50.

405. Long Keeping.

Extra Hardy Sort.

As the name indicates, this variety is a good keeper, and it is also superior as a main crop. It will stand drought and frost to a remarkable degree. Heads are uniform, large, firm and solid, and of very superior flavor; color dark green, with few outside leaves. If placed in a dry, cool collar or pit they will keep in excellent condition until well along in the following Summer.

In many large Cabbage growing localities this variety is grown for Winter storage to the almost total exclusion of all others.

Pkt., 5c; oz., 25c; ½ lb., 75c; lb., $2.50.

Booklet on Cabbage Culture. A concise, pocket treatise on growing of Cabbage, including soil preparation, sowing seed, cultivation, harvesting, storing and sale. Of value to every grower of Cabbage. It will be sent free with orders.

Cabbage Culture. Start using a fine tooth cultivator immediately after plants start to grow. Keep it up every 4 or 6 days until the Cabbages are large.

Harvesting. A large sharp knife or hatchet may be used for the purpose. An average crop of Cabbage is 12 to 15 tons per acre.

Value of Crop. A 12 ton crop would mean about 3000 to 4000 Cabbages. At a price of 50 c each, the returns per acre would be $150 to $200. After deducting the cost of the plants, fertilizer and labor, this will certainly leave a handsome profit for the grower. Whether it be best to sell the Crop in the Fall or hold until Spring will depend upon the variety of Cabbage grown, storage facilities and the market.

A Field and Specimen Head of Northrup, King & Co.'s Holland Cabbage.

Soil. For information in regard to raising the plants, see page 28. Any good Corn soil will grow Cabbage if enriched well with barnyard manures which can be plowed under in the Fall or applied as a top dressing in the Winter or Spring. As soon as field is dry in the Spring, start the seeds. Keep it going at weekly intervals up to transplanting time. This will result in a field clean from fowl weeds.

Treatment of Plants. Plants should be lifted with some soil on roots. Dip them in water, keeping the tops dry, and place in shade, roots down for two days. This hardens the plants and starts the second growth of roots.

Transplanting. Have rows 3 feet apart and plants 20 inches apart in row. Set with a trowel so that plants slope a trifle towards the North. Plant at least 6000 plants to the acre. If planted too far apart Cabbage grows too large for the commercial market.

Cultivation. Start using a fine tooth cultivator immediately after plants start to grow. Keep it up every 4 or 6 days until the Cabbages are large.
CARROT

Culture. For the best results the soil should be well worked to a good depth. For early use sow seed in rows 15 inches apart as early in the spring as the soil can be worked, sowing about 4 lbs. of seed per acre and cover the same with 1/2 inch of soil; but for main crop, sow about corn planting time, using 3 lbs. of seed per acre and the seed should be covered with nearly an inch of soil. One ounce of seed will sow 100 feet of drill. Make the rows two feet apart to allow for horse cultivation. Keep free from weeds and cultivate occasionally until the roots are large enough for table use and if grown for commercial purposes they may be cultivated with profit throughout the season.

When the plants are 3 inches high thin to 3 inches apart in the rows.

410. Northrup, King & Co.'s Chantenay. As a table variety it is first-class; in shape it is larger than the Scarlet Horn, and also broader at the shoulder. The flesh is of a beautiful, rich orange color and of the finest quality; it is medium early, with small tops. Roots taper slightly, but are uniformly stump rooted. Gives great satisfaction in both the market and private garden. Pkt., 5c; oz., 20c; 1/2 lb., 65c; lb., $2.00. Market Gardener's Stock. (Sold only in sealed packages.)

415. Chantenay. Regular Stock. Same as is ordinarily sold for Chantenay Carrot. This has not been as highly selected as our Market Gardener's stock, but will give good satisfaction. Pkt., 5c; oz., 20c; 1/2 lb., 65c; lb., $2.00.

420. Early French Forcing. The earliest, largely grown for forcing purposes; globular-shaped root of an orange red color. Pkt., 5c; oz., 20c; 1/2 lb., 65c; lb., $1.50.

425. Early Scarlet or Short Horn. One of the most popular varieties grown; color deep orange; flesh fine and of agreeable flavor; tops small; has a stumpshaped root. Grows well in shallow soil; one of the best for early outdoor planting and for table use. Pkt., 5c; oz., 15c; 1/4 lb., 30c; 1/2 lb., 65c; lb., $1.00.

430. Improved Danvers Half Long. Our strain of this popular Carrot, while not as "stump rooted" as the Chantenay, has a root which comes to a blunt point, a very beautiful Carrot. A first-class Carrot for all soils, in form midway between the Long Orange and the Short Horn. The root is of a rich, dark orange color and grows very smooth and handsome; twenty to thirty tons per acre not being an unusual crop. Pkt., 5c; oz., 10c; 1/4 lb., 30c; lb., $1.00.

435. Improved Long Orange. A well-known standard sort; roots long, thickest near the crown, tapering regularly to a point; color deep orange, suitable for the table and main field crop. Pkt., 5c; oz., 10c; 1/4 lb., 30c; lb., $1.50.

438. James Intermediate. A splendid variety, in shape midway between the half long and the long sorts. It is quite broad at the top and tapers to a blunt point. Flesh is rich reddish-orange, tender and sweet. Very desirable as a market variety, on account of the heavy yield, fine shape and appearance and excellent quality. Pkt., 5c; oz., 10c; 1/4 lb., 30c; lb., $1.00.

440. Half Long Scarlet Nantes, Stump Rooted. Tops of medium size; roots cylindrical, smooth, bright orange; flesh orange, becoming yellow in center, but with no distinct core. One of the finest quality and one of the most symmetrical and handsome of the medium sized sorts; excellent for market or home garden. Pkt., 5c; oz., 10c; 1/4 lb., 30c; lb., $1.50.

445. Oxheart or Guerande. This fine and very popular Carrot is intermediate as to length between the half-long varieties (such as Danvers) and the Scarlet Horn Carrots, but is much thicker than the latter, being at the top four to five inches in diameter. Flesh bright orange, fine grained and sweet. It is of very fine quality for table use and equally good for stock. Where other sorts require digging, Oxheart can be easily pulled, making it a particularly desirable sort for soils so stiff and hard that other sorts do not grow well. Pkt., 5c; oz., 10c; 1/4 lb., 30c; lb., $1.00.

"Handbook for the Garden" is the title of a 24-page booklet which includes information on preparing and fertilizing the soil for garden crops, how to make hot-beds and cold frames, transplanting, watering and cultural directions for all vegetable and flower seeds. It is a valuable guide to the home gardener and can be purchased at a nominal price. If ordered with your order, $1.00.

For home use and early bunching Oxheart, Chantenay and Nantes are the best, for general crop the Danvers Half Long, while for feeding stock the Mastodon yields the largest crops.
450. Northrup, King & Co.'s

CELEBRATED MASTODON CARROT
For Feeding Stock.
Sold only in Sealed Packages.

If you are a farmer we want to urge just one thing on you. It is this—try our Mastodon Carrot. There may be room for difference of opinion regarding the best stock Carrot, but there cannot be room for difference of opinion as to which is the best stock Carrot for feeding stock.

Northrup, King & Co.'s Mastodon Carrot is not, properly speaking, a table Carrot, although the flesh is remarkably firm and sweet. It is not a Carrot for the market gardener, but it is emphatically the Carrot for the farmer, and once used, nothing else will take its place.

Northrup, King & Co.'s Mastodon Carrot is the heaviest cropping Carrot grown, yielding more tons to the acre than any other sort. The flesh is white, crisp and solid and very sweet in flavor. It is a vast improvement on the white and green Belgian sorts which have been favorites in the past, as it is not only much more productive but vastly easier to handle. The roots are short and very heavy at the shoulder, rendering them easily harvested. An important feature, also, is that they do not easily break in pulling or sorting. Too much can scarcely be said of their size and great productiveness. The roots frequently measure 15 to 20 inches in circumference, and 18 to 20 tons to the acre is not an extravagant statement as to yield. Pkt., 5c; oz., 10c; lb., 30c; bu., $1.10. By express or freight at purchaser's expense, 5 lbs. and upwards at 60c per lb.

18 bu. Mastodon Carrots Raised from a 10 cent Package of Seed.

18 Bu. for 10 Cents.
I send you a picture showing 18 bushels of your Mastodon Carrots raised from a 10 cent package of seed. Many of the roots weigh over 4 pounds. E. F. FARRABE, Minn.

Thought You Were Fooling.
I bought some of your Mastodon Carrots last year thinking that you were fooling when you said in your catalogue that they would weigh 5 lbs., but I was surprised to pull one up which weighed 7 lbs. 5 oz.

CARL ANDERSON, Minn.

92 Bushels for 25 Cents.
Last year we raised 92 bushels of Mastodon Carrots from 25 cents worth of seed, which I think was an extra good yield.

L. J. JOHNSON, Wis.

115 Bushels for 35 Cents.
I shall want some more of your Mastodon Carrot seed. I raised 115 bushels from 35 cents worth of seed.

F. C. SQUIRES, N. Y.

2000 Bushels an Acre.
I have found your seeds to be all that you claim. The Mastodon Carrot is an enormous yielder—they will give me 2000 bushels an acre.

AUGUST STOLPER, Wis.

455. Northrup, King & Co.'s

VICTORIA CARROT FOR STOCK
Sold only in Sealed Packages.

The Victoria is a very large and a very rich stock Carrot. There can be only one best stock Carrot, and we think our Mastodon is that Carrot, yet there are many who prefer a yellow Carrot. We can say to such that there is no yellow carrot which can approach the Victoria in size, in yield and in feeding qualities. It is the largest and best form of Orange or Yellow Carrot known. The roots are remarkably fine, very symmetrical and of excellent quality, possessing high feeding properties. It is a heavy cropper on all soils, but is especially adapted for rich, strong land. It is nearly half as much weight again as an acre as the ordinary varieties, and as the roots grow more above the ground it is much easier to gather the crop. This grand variety is sure to suit every one who grows it. Pkt., 5c; oz., 10c; lb., 30c; bu., 85c. By express or freight at purchaser's expense, 5 lbs. and upwards at 60c per lb.

Book on Carrots and Mangels. By J. H. Gregory. How to raise, store and feed them. Price, 30c, (postpaid, 35c). Booklet on Root Crops. A small, pocket edition giving in concise form information on Stock Carrots, Mangels, Rutabagas and other roots. Tells how to grow, store and feed them. This booklet will be sent free with orders when requested or will be mailed on receipt of 3c in stamps.

All vegetable and flower seeds sent prepaid except where noted.
CAULIFLOWER

Culture. For early use, seed should be sown 1/4 of an inch deep in a greenhouse, hot bed or in boxes in the house, about 6 weeks before the plants are needed for planting out. See page 18 for hot beds.

If, when the second leaves appear, the plant can be transplanted, spacing them 3 inches apart, better and more hardy plants will be obtained.

As soon as the soil can be worked in the spring the plants should be removed to the open field and set in rows 2 feet apart each way. Cultivate occasionally to keep out weeds and preserve the moisture in the soil until the plants shade the ground.

For late use sow seed in beds about May 10th and when the plants are large enough remove to the garden, setting them from 2 to 2 1/2 feet each way.

Cultivation must begin as soon as the plants are set in the field, and continued as long as it is possible to get through them with a horse cultivator without doing injury to the plants.

As soon as the heads begin to form, tie the leaves together over the head to keep out the light; by this process nice white heads are obtained.

One ounce of seed will produce about 1,000 plants.

460. Northrup, King & Co.'s Model

Sold only in Sealed Packages.

In competition with all other strains the Model Cauliflower has won the approval of critical gardeners, being the earliest and best sort grown. It is suitable not only for early use, but is superior for late planting. The heads are hard and solid and do not spread as do some of the inferior sorts. No other equal it in purity of color, being clear snow white. It is equally desirable for family use and for the market garden. The heads are large—from 9 to 12 inches in diameter, and weigh from 4 to 8 pounds. On account of its close growing, compact habit many more plants may be grown on a given area than of the late spreading sorts.

Pkt., 20c; 1/4 oz., 70c; 1/2 oz., $1.25; oz., $2.25; 1 lb., $5.00.

465. Northrup, King & Co.'s

Drought Resisting (Sold only in sealed packages.) Especially adapted to dry locations, where it will produce large, solid heads when all other sorts would fail. To secure the best heads the soil must be rich and thoroughly cultivated.

Pkt., 20c; 1/4 oz., 70c; 1/2 oz., $1.25; oz., $2.25; 1 lb., $5.00.

470. Snowball. Forms snow white heads six to ten inches in diameter, of good quality. Its close growing habit permits more heads to a given area than the later maturing sorts. Excellent for both early and late planting. Grown from stock seed obtained from originators. Equal to any strain of 'Snowball' on the market.

Pkt., 10c; 1/4 oz., 10c; 1/2 oz., $1.15; oz., $2.00; 1 lb., $7.00.

475. Extra Early Dwarf Erfurt. The finest strain procurable. Plants dwarf and compact, forming good sized heads, very fine stock.

Pkt., 15c; 1/4 oz., 75c; oz., $1.25; 1/2 lb., $4.00; lb., $15.00.

482. Extra Early Paris. Heads are sold and very uniform, but not considered as sure heading as the Erfurt type.

Pkt., 10c; oz., 25c; 1/2 lb., $1.30; lb., $5.00.

Cauliflower Plants. For early and late plants see page 100.

CRESS

Culture. Sow seed thickly in shallow drills 12 inches apart, in the spring, and for a succession every two weeks.

One ounce of seed required for 200 feet of drill.

Water Crees. Sow the seed in cool, moist soil in the early Spring or if a slow slow running stream or ditch is near, the seed may be sown within the same near the bank. When sown in a location of this kind it grows luxuriantly for years.

485. Fine Curled (Pepper Grass.) Quick growing; leaves finely cut like parsley; growth dwarf and compact; crisp and pungent.

Pkt., 5c; oz., 10c; 1/4 lb., 20c; lb., 10c.

490. Water Crees. Highly esteemed as a salad; also used as a garnish for meats.

Pkt., 10c; oz., 40c; 1/4 lb., $1.25; lb., $4.00.

495. CHIVES

Chives are perfectly hardy perennial plants of the onion type. They are grown for the small leaves which come up very early in the Spring and give a mild onion flavor to food in which they are placed. The tops may be cut off close to the ground as desired.

Pkt., 10c; 1/4 oz., 15c; 1/2 oz., 30c; oz., 50c. For roots see page 100.

CELERIAC

(Turnip Rooted Celery)

Culture. Treat seeds and plants the same as recommended for celery with the exception that it is customary to set the Celeriac plants in rows 1 foot apart. The roots are preserved for use in Winter by storing in moist sand in the cellar.

One ounce seed for 1,000 plants.

500. Large Erfurt. Large, smooth, excellent flavor.

Pkt., 10c; oz., 30c; 1/4 lb., 90c; lb., $3.00.
CELELY

Culture. Sow seed in the garden, as early in the spring as the soil can be worked. Cover the seed lightly and firm well. Keep the bed moist to insure quick germination and growth. Before setting out the plants shear off the top leaves, which makes stocky plants with a tendency to spread out. When ready, set plants 6 to 8 inches apart in rows 3 to 4 feet apart, according to variety and soil. When the roots of the Celery plants are very long it is advisable to trim them off just before setting to about 3 inches. Cultivate well until the middle of August, then, work up the soil between the rows around plants from time to time until plants are covered and they will soon be ready for use. When desired for winter use it should not be bleached in the field, but enough soil should be drawn about it to secure an erect habit of growth and transferred to the cellar prior to settled cold weather. One ounce of seed will produce about 3,000 plants.

505. Northrup, King & Co.'s Golden Self Blanching. This splendid variety is without doubt the most popular Celery grown. It is a self-blanching sort, with a little banking or covering, even the outer ribs assume a beautiful golden yellow, while the heart or vine stalks are delicately tender, brittle and sweet. This variety is being very extensively grown both for market and private use, not only on account of its ease of culture, but for its superior quality. It is not quite so early as the White Plume, but is of heavier and more compact growth, the stalks being thick, crisp and brittle. The hearts are large and solid, blanching a beautiful waxen yellow. It is tender and sweet and free from stringiness; flavor rich.

Our Private Stock seed is procured from a noted Celery grower in France. The American grown seed is often as good as any produced in France, but we have sometimes been disappointed in the quality, while the seed produced in France has never failed us. For that reason we offer both strains.

Our Private Stock seed is sold only in sealed packages. Large pkt., 25c; oz., $1.50; 1/2 lb., $3.00.

510. Golden Self Blanching, American Grown. This is the same variety as our Private Stock seed but is American grown. It gives good results as a rule but we do not recommend it so highly as our French grown seed. Pkt., 25c; oz., 60c; 1/2 lb., $1.75; lb., $6.00.

515. Northrup, King & Co.'s Kalamazoo. (Sold only in sealed packages.) We consider our Kalamazoo absolutely and without exception the very best Celery grown. It is late, it is not self-blanching, but it is worth many times over, all the extra trouble and labor involved in growing it. Kalamazoo Celery, when properly grown, is extremely large, solid and crisp, and possesses a rich, sweet and "nutty" flavor unequalled by any Celery we ever saw anywhere. It is a fine keeper. Pkt., 10c; oz., 15c; 1/2 lb., $1.00; lb., $5.00.

520. White Plume. A known variety. Popular on account of its easiness and the ease of its culture. Pkt., 10c; oz., 40c; 1/2 lb., $1.25; lb., $4.00.

530. Golden Hearted Dwarf. A favorite main crop variety. When blanched the stalks are of a wavy yellow color, solid and crisp. A splendid keeper. Pkt., 10c; oz., 25c; 1/2 lb., $2.50.

535. Giant Pascal. One of the most popular sorts for winter use. It is very large in growth; the stalks are exceptionally thick with very heavy hearts, which, when blanched, are of a beautiful creamy yellow color. Pkt., 10c; oz., 25c; 1/2 lb., $2.00.

537. Winter Queen. A very fine variety for Winter storage. Robust, stocky growth, requiring but little labor in blanching. The heart stalks are heavy, broad and solid, but crisp and tender, blanching to a rich, creamy-white. Pkt., 10c; oz., 40c; 1/2 lb., $2.00; lb., $8.00.

Celery Plants. Early and late, see page 100.

Northrup, King & Co.'s Golden Self Blanching Celery.
Market gardeners and private planters should keep in mind the important fact that Sweet Corn produced earlier and more hardy than the same varieties grown farther south. We do not think it too much to claim that nearly all of our varieties of corn are ready for use two weeks or ten days earlier than the same varieties produced elsewhere. This means a great deal to the gardener who wishes to have his Corn first in market, for it is then that the high prices are paid. The quality of the corn is, of course, of vital importance also to the planter growing Corn for his own use, as it lengthens the season for all varieties.

One lb. of seed will plant about 100 hills; 12 to 15 lbs., an acre in hills. The Minnesota State Law designates 48 lbs. as a lb. of Sweet Corn.

The Two Best Early Varieties of Sweet Corn

545. Golden Bantam

Should be grown in every garden.

Everyone likes to eat Golden Bantam Corn. In fact, many people will not take any other when Golden Bantam is obtainable.

Quality. The flavor is deliciously distinct, superior to that of any other corn. Of all varieties the name 'Sugar' is one that must be associated with the Golden Bantam. It is so unusually sweet. The decided preference shown for it in market, restaurant, and home has enabled many growers to sell Golden Bantam at a premium. It is so unique in appearance that all who have ever enjoyed the golden yellow ears recognize them instantly. One cannot forget such splendid quality.

Habit of Growth. Another good feature of this Corn is the character of its growth. The stalks are usually very close together and thus produce a large crop on a very small area. The ears average more than double the stalk; they are 6 to 7 inches long, just the right size to hold the kernels. The kernels are tender, very wide and of good depth while the cob is small. There are 8 to 12 grains to the eye. These Golden Bantam ears are enclosed in a heavy husk that protects them against insects and disease.

For the Home Garden. The best way to grow Golden Bantam Corn is to raise it yourself. Then you can be sure that it is grown in your garden and that it is not a false curiosity, but just the thing you know in your backyard. This is of the greatest importance since it is picked too early it is watery and tasteless and will not take to the husks become tough. However Golden Bantam remains in such condition for eating an unusually long time.

No Sweet Corn is better adapted to the home garden than Golden Bantam since its slender growth requires little space and it matures in such a short season that some other crop can be raised on the same ground earlier or after the latest planting or after removing the earliest.

Earliness. In season Golden Bantam is about six days earlier than Peep o’Day or Bantam Breeze. It is one of the finest varieties of the Lower Corn country. It flowers in April and transplant it later to the garden. By this method Golden Bantam is ready for use in early Summer. It may be set out 4 to 6 weeks before the last frost and 6 to 8 weeks after the last frost. In high altitudes where many other varieties will not mature on account of weather during this or early frost, this variety proves successful.

Northrup, King & Co.’s Strain. Our Golden Bantam Sweet Corn is all grown in Minnesota under the supervision of our experts. Here, in the North, the growing season is short and must be started earlier than it does for the southern states. Consequently Northrup, King & Co.’s Strain of Golden Bantam is the earliest known. It is the best to plant in high altitudes or northern regions — wherever the growing season is short. In the Middle West and Eastern States — Earliness comes in the forefront. The district in New England alone took a card — New England, where most of our Sweet Corn originated. There if anywhere they knew what good Sweet Corn is and so they come to the Northwest for their seed, convinced that here only can they secure the earliest and best strain.

Price for Golden Bantam Sweet Corn. Pkt., 5c; 1 lb., 10c; 2 lbs., 25c; 5 lbs., $1.00; 10 lbs., $1.50; 25 lbs., $3.25; 50 lbs., $6.25; 100 lbs., $12.00.

Facts About Both Varieties.

Satisfaction. We have yet to hear of a grower who has planted our Peep o’ Day or Golden Bantam Corn and was not well pleased with them when we was asked and climate were favorable. From all points come letters from pleased customers.

Culture. The stalks, being short and small and having few leaves, may stand very close together. The seed may be planted either in hills or in rows. If in hills, plant three or six or seven kernels in a hill; thinning out well as soon as possible. If in rows, four plants in each hill. If in rows and not in hills, drop the seed from six to eight inches apart, according to the soil, and if planted early or in the open ground one inch deep. Seed planted later should be planted deeper, according to the amount of moisture in the soil. The rows may be 3 or 4 feet apart and be kept cultivated early or in the open ground. The rows may be 3 or 4 feet apart, and be kept cultivated early or in the open ground. The rows may be 3 or 4 feet apart and be kept cultivated early or in the open ground.

Order Early. It will be a great convenience both to our customers and to ourselves if all orders are sent to us early. This will insure their being filled immediately from the choice of our stocks.

Note — For succession, plant Golden Bantam for earliest; Peep o’Day for second early; Portland for medium; Northrup, King & Co.’s Zig Zag Evergreen or Improved Black Mexican for late, and secure the very best Sweet Corn in each class.

To have the finest Sweet Corn it must be picked in just the right condition. This is when, if you will, the hand that touches the corn at the slightest pressure will be of inferior quality if it is either a few days too old or too young.

Our Sweet Corn is Thoroughly Tested before it leaves our hands.

Prices. At the following: 100 packet and quart pounds are sent prepaid, all larger quantities are shipped at purchaser's expense; if wanted by parcel post add postage at rates on page one.
SWEET CORN

At the following prices on Sweet Corn, packets and quarter lb. lots are sent prepaid, all larger quantities at purchaser's expense; if wanted by parcel post add postage at rates on page one.

**Culture.** Sow upon arrival of warm weather in drills 2 inches deep, 3 to 4 feet apart, according to variety, placing the seeds 8 inches apart in drills or 6 seeds in hills 3 to 4 feet apart each way. Cultivate to keep free from weeds and when Corn is well started thin to 4 stalks to the hill.

Plant early varieties in succession, or sow early, second early and late sorts at one time, which will continue the season for several weeks. One bushel of seed will plant from 3½ to 4 acres.

The Minnesota State Law designates 4½ lbs. as a bushel of Sweet Corn.

---

**EXTRA EARLY VARIETIES**

550. **Early Minnesota.** A standard early sort of excellent quality, especially desirable where seasons are short. The ears bear 8 to 10 rows of large, white grains. This variety is popular on account of its great productiveness. Excellent for market, home and canning use. Pkt. $1.00; ½ lb.; 1 lb.; 1½ lb.; 4 lb.; 5 lbs.; 8½ c.; 10 lbs., $1.50. 20 lbs., $2.25; 50 lbs., $5.25; 100 lbs., $10.00.

555. **Early Red Cory.** Equally as early as White Cory. Corn is white but the cobs are red. Very sweet and tender. Pkt. $1.00; ½ lb.; 1 lb.; 1½ lb.; 4 lb.; 5 lbs.; 8½ c.; 10 lbs., $1.50. 20 lbs., $2.25; 50 lbs., $5.25; 100 lbs., $10.00.

560. **Extra Early White Cory.** One of the earliest varieties, well and favorably known in all parts of the country. It succeeds well where the seasons are short, and can be recommended for general planting. Ears six inches long, with eight rows of broad grains. Pkt. $1.00; ½ lb.; 1 lb.; 1½ lb.; 4 lb.; 5 lbs.; 8½ c.; 10 lbs., $1.50. 20 lbs., $2.25; 50 lbs., $5.25; 100 lbs., $10.00.

562. **Extra Early White Mexican.** As sweet and delicious as Black Mexican and as early as White Cory. Stalks 4½ ft. high. Ears eight inches long, usually eight rows. Superior in quality to any early variety of equal size. Pkt. $1.00; ½ lb.; 1 lb.; 1½ lb.; 4 lb.; 5 lbs.; 8½ c.; 10 lbs., $1.50. 20 lbs., $2.25; 50 lbs., $5.25; 100 lbs., $10.00.

564. **Howling Mob.** This variety originated at Toledo, Ohio, and its queer but appropriate name refers to the loud and clamorous demand for the Corn when brought to market. The stalks are usually about a foot in height and produce early in the season. This is a splendid variety to place in small gardens. Pkt. 25 c.; 50 c.; 1 lb.; 2 lb.; 5 lbs., $1.15; 10 lbs., $2.50; 50 lbs., $7.75; 100 lbs., $15.00.

575. **Mammoth White Cory.** Similar to Early Cory, quite as early. The kernels, however, are somewhat broader and the ears average somewhat larger in size. Pkt. $1.00; ½ lb.; 1 lb.; 1½ lb.; 4 lb.; 5 lbs.; 8½ c.; 10 lbs., $1.50. 20 lbs., $2.25; 50 lbs., $5.25; 100 lbs., $10.00.

578. **Pocahontas.** An exceptionally early variety. The growth is very uniform and the ears are evenly and compactly filled with broad, white kernels which are tender, sweet and of very fine quality for so early a variety. Pkt. $1.00; ½ lb.; 1 lb.; 1½ lb.; 4 lb.; 5 lbs., $1.15; 10 lbs., $2.50; 25 lbs., $4.25; 50 lbs., $8.50; 100 lbs., $15.00.

**SECOND EARLY VARIETIES**

585. **Northrup, King & Co.'s Portland.** (Sold only in sealed bags.) This variety is not so quite as early as the Cory, but it will pay Sweet Corn growers to wait a few days for it. Private families pronounce it unsurpassed; market gardeners capture trade with it. Pkt. $1.00; ½ lb.; 1 lb.; 1½ lb.; 4 lb.; 5 lbs., $1.15; 10 lbs., $2.00; 25 lbs., $3.75; 50 lbs., $7.25; 100 lbs., $14.00.

590. **Early Crosby.** A standard sort deservedly prized by thousands of planters as one of the sweetest of varietes. The kernels are very closely set. This strain is superior to any variety of Sweet Corn grown for canning purposes in the state of Minnesota. Pkt. $1.00; ½ lb.; 1 lb.; 1½ lb.; 4 lb.; 5 lbs., $1.15; 10 lbs., $2.00; 25 lbs., $3.25; 50 lbs., $7.25; 100 lbs., $14.00.

592. **Early Evergreen.** This fine variety is ten to twelve days earlier than Stowell's Evergreen and yields large, handsome, ten or twelve-rowed ears. An excellent variety to follow Mammoth White Cory. Pkt. $1.00; ½ lb.; 1 lb.; 1½ lb.; 4 lb.; 5 lbs., $1.15; 10 lbs., $2.00; 25 lbs., $3.25; 50 lbs., $7.25; 100 lbs., $14.00.

595. **Perry's Hybrid.** A well known and favorite sort, valued on account of its hardness, productiveness and size of ears. Pkt. $1.00; ½ lb.; 1 lb.; 1½ lb.; 4 lb.; 5 lbs., $1.15; 10 lbs., $2.00; 25 lbs., $3.25; 50 lbs., $7.25; 100 lbs., $14.00.

600. **White Evergreen.** This variety is a little earlier than Perry's, but is preferred by many. Stowell's and is pure white in color. The stalks are of strong, vigorous growth from six to seven feet high. The ears are very large and well filled to the tip with long, slender, pure white grains of the finest flavor. Pkt. $1.00; ½ lb.; 1 lb.; 1½ lb.; 4 lb.; 5 lbs., $1.15; 10 lbs., $2.00; 25 lbs., $3.25; 50 lbs., $7.25; 100 lbs., $14.00.
LATE VARIETIES.

665. NORTHROP, KING & CO.'S ZIG ZAG EVERGREEN.
(Sold only in sealed bags.) The very best of all late white varieties. We have statements from experiment stations and from canning factories, as well as from hundreds of private planters, testifying to its superior sweetness and productiveness, incomparable whiteness when cooked and fine appearance on the table. As introducers of this variety, we assert, without fear of contradiction, that it is best of all the late white sorts. Pkt. 5c; ½ lb., 10c; ¼ lb., 15c; 1 lb., 25c; 5 lbs., 85c; 10 lbs., $1.00; 25 lbs., $3.00; 50 lbs., $5.75; 100 lbs., $11.00.

610. STOWELL'S EVERGREEN.
The best known and most largely planted of all the varieties. We are free to confess that Northrop, King & Co.'s Zig Zag Evergreen possesses all of the good qualities which have made the Stowell's strain so popular. At the same time, the Stowell's Evergreen is hard to beat and for a long time to come many will have it in preference to any other sort. This Corn is distinguished by the large ear, the long, deep kernels, its rich, sugary flavor and its long-keeping qualities. Our seed has been selected for its sweetness, productiveness and large size. Pkt. 5c; ¼ lb., 15c; ½ lb., 25c; 1 lb., $1.00; 10 lbs., $1.50; 25 lbs., $2.50; 50 lbs., $6.25; 100 lbs., $12.00.

Please note prices on Sweet Corn are prepaid only on packets and quarter pound lots. Postage rates given on page one.

Gathering a Profitable Sweet Corn Crop.
CUCUMBER

Northrup, King & Co.'s Sterling Cucumber.

Culture. Plant the seed 3/4 of an inch deep in hills 4 to 6 feet apart each way, according to the variety, about corn planting time, allowing 10 seeds to the hill. As soon as the plants commence to run, remove all but 3 or 4 of the most promising ones in each hill. Cultivate frequently as long as the vines will permit. The seed may also be started in old berry boxes by placing them in the hot-bed. When the weather is suitable—settled and warm—remove the box as the plants are placed in the garden. The fruit should be gathered as soon as large enough for use. If it is not, the productivity of the vines will be permanently injured.

One ounce required for 60 hills; two to three pounds per acre.

625. Northrup, King & Co.'s Sterling.

Sold only in Sealed Packages.

Will be found to possess the following points of superiority:

First. It is the earliest white spine Cucumber, suitable for table, market or shipping purposes, under all conditions of culture, whether under glass or in the open ground.

Second. It is one of the greatest producers of all varieties; and at all stages of growth is the handiest and most attractive of all American sorts.

Third. It is of a very deep green color, which it retains during a much longer period of growth than any other variety, while in symmetry of form it is so regular, so uniformly one like the other as to create comment wherever it is seen.

Fourth. The quality is superb, being exceedingly brittle and crisp. The flavor is delicate and entirely devoid of the bitter taste so frequently noticed in other varieties.

Fifth. As a shipping Cucumber, the “Sterling” cannot be surpassed, as it holds up in color and quality better than any other variety.

Price, pkt. 5c; oz., 20c; 1/2 lb., 50c; lb., $2.00.

635. Ak-sar-ben. One of the finest strains of white spine Cucumbers; vigorous and prolific. Fruit is uniform in size, averagely eight to ten inches long, dark green in color and handsome in appearance. Pkt., 5c; oz., 15c; 1/2 lb., 50c; lb., $1.50. Very productive, grown largely for market and canning. Fruit medium to large, very smooth, bright green. Pkt., 5c; oz., 15c; 1/2 lb., 50c; lb., $1.25.

640. Boston Pickling.

FINE FOR ALL PURPOSES. Medium length, pointed at each end; has large spines, deep green, very prolific. Good for pickling. Pkt., 5c; oz., 15c; 1/2 lb., 50c; lb., $1.75.

Chicago or Westerfield Pickling. Market gardeners. Medium length, pointed at each end; has large spines, deep green, very prolific. Good for pickling. Pkt., 5c; oz., 15c; 1/2 lb., 50c; lb., $2.00.

650. Cool and Crisp. A strain of white spine similar to the Arkansas, dark green. Fine for table use. Pkt., 5c; oz., 15c; 1/2 lb., 50c; lb., $1.25.

Davis Perfect. A carefully selected strain of Extra Long White Spine, suitable for both greenhouse and outdoor culture. The fruits are of large size, splendid quality and fine color. The flesh is tender, brittle and of excellent flavor. A favorite for market use. Pkt., 5c; oz., 15c; 1/2 lb., 50c; lb., $2.00.

For illustration see following page.

660. Early Frame or Short Green. Used for table and pickling. Very productive. Fruit straight, bright green. Pkt., 5c; oz., 15c; 1/2 lb., 50c; lb., $1.25.

665. Early Green Cluster. Fruit small, grows in clusters of two or three, very prolific, short, dark-green. Pkt., 5c; oz., 15c; 1/2 lb., 50c; lb., $1.25.

Northrup, King & Co.'s Extra Long White Spine. (Sold only in sealed packages.) An extra fine variety for either greenhouse or open ground. It grows to a large size in a very short time and commands fancy prices on account of its fine form and appearance. The above illustration is an interior view of a greenhouse in which this variety is grown during the Fall and Winter, with the most satisfactory results. Pkt., 5c; oz., 20c; 1/2 lb., 60c; lb., $1.75.
CUCUMBER

668. Green Prolific. Very productive, planted both for slicing and pickling. Four or five inches long when large enough to slice. Pkt., 5c; oz., 15c; lb., 40c; 4 lb., $1.25.

670. Improved Arlington White Spine. Is uniform in size and shape averaging 7 to 8 inches long. Color dark green, quality excellent and contains few seeds. Pkt., 5c; oz., 15c; lb., 50c; 1 lb., $1.50.

675. Japanese Climbing. A vigorous grower, can be trained on a trellis. Fruit from 1 to 14 inches long, dark green and smooth. Flesh pure white, crisp and tender. Pkt., 5c; oz., 15c; lb., 50c; 1 lb., $1.75.

680. Klondike. One of the best varieties for slicing. It will produce handsome, very dark green fruits slightly striped at the ends, equal in appearance to hot-house specimens. A white spined cucumber of medium early maturity, fruits averaging about eight inches in length and two inches in diameter, uniform in size and shape. The vines are very hardy and productive and continue long in bearing. Market gardeners find this variety especially desirable because it retains its dark green color much longer and is less affected by the hot sun than most other sorts. Much used as a shipping cucumber, but is also adapted for the home garden. Pkt., 5c; oz., 20c; 4 lb., 55c; 1 lb., $1.75.

690. Northrup, King & Co.'s Pickling. (Sold only in sealed packages.) It would be difficult to "make to order" a better pickling cucumber than this. Fruit is medium length, pointed at each end; color deep green. It is very productive. Flesh, crisp, tender, and covered with spines. The best sort for those who like a crisp, tender pickle. Pkt., 5c; oz., 20c; 4 lb., 55c; 1 lb., $1.75.

695. Northrup, King & Co.'s Siberian. (Sold only in sealed packages.) The earliest. Fruits are small, being about 3 inches in length and 1½ inches in diameter. Plants productive and fruits of excellent quality. Pkt., 5c; oz., 15c; 4 lb., 46c; 1 lb., $1.25.

I think your Siberian Cucumber is the best I ever saw in this locality. Ira Ward, Wash.

Booklet on Vine Crops. Additional booklets give information on planting, cultivation and harvesting Cucumbers, also varieties best adapted for various uses. Sent free with orders when requested on mailing labels. A manual on the growing of vegetables for home and market. 165 pages. Price, cloth, $1.00; paper covers, 50c; postpaid.

700. White Spine Evergreen. King & Co.'s Special Strain. A fine strain, bearing blue-green fruit, often from 10 to 12 inches in length, smooth, round and of fine quality. Especially recommended for hot-bed culture. The seed we offer has been taken from fruit selected for its ideal form, uniformity in size, shape and color and general appearance. A very satisfactory variety in every way. Pkt., 5c; oz., 20c; 4 lb., 55c; 1 lb., $1.75.

White Spine, Evergreen Cucumber.
Northrup, King & Co.'s Special Strain.

708. White Spine, Improved. Large, handsome, uniform fruits. Crisp and of fine flavor. Pkt., 5c; oz., 15c; ½ lb., 30c; 1 lb., $1.50.

710. White Spine, Peerless. Larger than the improved, but not quite so early. Pkt., 5c; oz., 15c; ½ lb., 30c; 1 lb., $1.50.

Go Like Hot Cakes.
I planted one acre of Sterling Cucumbers. They got thick cakes on the market, an account of the nice shape and color. They yield well also.

Albert Weihen, Wis.
Northrup, King & Co., Seedsmen, Minneapolis, Minn.

**EGG PLANT.**

Culture. Egg Plant seed should be sown in hot-beds in March or April and transferred to pots or boxes when an inch or two high and planted out early in June in rows 2 1/2 feet apart each way, cultivation same as for cabbage. One-fourth will provide plants for one acre. For plants see page 100.

715. Northrup, King & Co.'s Improved New York Spinlessless

Sold only in Sealed Packages.

The handsome type and most perfect strain of Egg Plant in existence. The plants are stocky and low branching, it also entirely free from spines, and produce continually handsome, deep purple fruits of largest size and most perfect symmetry. The plants usually bear eight to ten immense fruits of the finest quality before being killed by frost. Large pkt., 10c; oz., 50c; 1/4 lb., $1.50; lb., $5.00, postpaid.

716. Black Beauty.

A little earlier than our Improved New York Spinless but usually not quite so large. The skin is a rich, bistre, dark purple. Very desirable for the market as the fruit holds its rich coloring a long time. Pkt., 10c; oz., 50c; 1/4 lb., $1.50; lb., $5.00.

**ENDIVE.**

This plant furnishes an attractive and appetizing salad for the Fall and Winter months, or by repeated sowings a supply may be had nearly all the year round. Useful in flavoring soups, stews, etc. Makes delicious greens if cooked like spinach.

Cultivation same as for lettuce. The bleaching of Endive is brought about by drawing the leaves together into a head and tying them and this should be done a month before it is wanted for table use.

One ounce of seed required for 100 feet of row.

718. Broad Leaved Batavian.

Leaves are broad, thick, green, more or less twisted and waved, with white mid-ribs. It forms large hearts, which when blanched, form one of the best winter salads. Crisp, tender and fine flavor. Pkt., 5c; oz., 15c; lb., 50c; lb., $1.50.

720. Green Curled.

Leaves finely cut. Pkt., 5c; oz., 15c; 1/4 lb., 40c; lb., $1.25.

725. White Curled.

Veery beautiful, leaves need no blanching. Pkt., 5c; oz., 15c; 1/4 lb., 40c; lb., $1.25.

739. GARLIC.

About 250 lbs. required per acre.

Garlic is a perennial plant with a bulbous root and belongs to the Onion family. It has flat leaves and the bulb is composed of several parts or bulbs similar to those of a multiplier onion set. Garlic has a strong penetrating odor and flavor and is highly esteemed for flavoring soups, stews, etc. We cannot offer seeds but can supply the bulbs or sets.

Prepare the ground as for onions, separate the sets and plant them in drills eight inches apart and four to six inches apart in the drill, covering two inches deep. Cultivate like onion sets. When the leaves turn yellow, pull up the bulbs and dry in the shade.

Prices of well cured bulbs: by express or freight at purchaser’s expense. lb., 35c; 1/2 lb., or more at 30c per lb. If wanted by parcel post add 10c per lb. to cover extra cost.

**KALE or BORECONE.**

Culture. More hardy than cabbage and makes excellent greens. Improved by a touch of frost. Sow in May and June, cultivate same as cabbage. See page 143 for Thousand Headed Kale.

740. Dwarf German.

(Dwarf Curled Scotch Kale.) This is more hardy than cabbage and makes excellent greens for Winter and Spring use. The leaves are curly, bright green, very tender and delicate in flavor. Sow seed in May or June, transplant in July and cultivate same as cabbage. For early Spring use sow in September; protect over Winter with a covering of straw or litter. Pkt., 5c; oz., 10c; 1/4 lb., 30c; lb., $1.00.

742. Tall Green Curled Scotch.

Grows up to three feet high. Extremely hardy, being improved, round, and of heavy growth. Pkt., 5c; oz., 15c; 1/4 lb., 30c; lb., $1.00.

**KOHL RABI.**

Culture. Sow the seed in the Spring in drills 1/2 of an inch deep and 2 feet apart and when the plants are a few inches high thin to 15 inches. Cultivate same as for beets.

Two pounds of seed required per acre.

745. Early White Vienna.

For Forcing. Very early, small, handsome, white bulb. Best early variety for the table. Pkt., 5c; oz., 20c; 1/4 lb., 60c; lb., $2.00.

What Our Trade Mark Means.

Our Sterling Bag Trade Mark is used to brand only those varieties of seeds which we can especially recommend to our customers. A variety so marked will be found the best of its kind in every instance. We use this method to designate our specialties. Northrup, King & Co.'s Sterling Brand Seeds have proved by careful test superior in purity, germination, productivity and hardiness. They comply with the state pure seed laws of all states.

Northrup, King & Co.’s Improved New York Spinlessless Egg Plant.

Kale or Borecole.

White Curled Endive.
LEEK.

Culture. Sow seed in early Spring in rows 1 foot apart and 1 inch deep. When 6 inches high, transplant 4 to 6 inches apart in rows 12 inches apart, setting the plants in the ground up to their center leaves and as they grow draw the soil up around them. This process tends to thicken the Leek and to make more palatable the edible portion Seed required per acre, 4 lbs.; 1 oz. for 100 feet of drill.

750. Large American Flag, or "Broad London." A large growing variety. Pkt., 5c; oz., 15c; 1/4 lb., 50c; lb., $1.50.

MUSTARD.

Culture. When used for salads, sow thickly in shallow drills, 6 inches apart. Successive sowings may be made every week or two. When grown to produce seed for use in pickles, pepper sauce, etc., sow early in rows a foot apart and 3 inches apart in the row.

755. Southern Giant Curled. Used largely for salad, especially in the South. Pkt., 5c; oz., 10c; 1/4 lb., 25c; lb., 65c.

757. White Mustard. Salad or greens. Pkt., 5c; oz., 10c; 1/4 lb., 25c; lb., 75c.

OKRA or GUMBO.

Culture. Sow the seed thickly in rich ground as soon as the ground has become warm, in drills 3 feet apart and one inch deep. Thin out to ten inches apart and cultivate freely.

760. Mammoth Long Podded. Exceedingly productive and bears splendid dark green pods from eight to nine inches long. It does not grow hard. Pkt., 5c; oz., 10c; 1/4 lb., 20c; lb., 70c.

762. Dwarf Green. Grows slow but stocky and is very productive. Pkt., 5c; oz., 10c; 1/4 lb., 20c; lb., 60c.

763. Long Green. The plant is dwarf, but pods are long and tender. Pkt., 5c; oz., 10c; 1/4 lb., 20c; lb., 60c.

764. White Velvet. The plants are about three and one-half feet high, early maturing and very productive. The pods are white, long, smooth and are tender until nearly full sized. Pkt., 5c; oz., 10c; 1/4 lb., 20c; lb., 60c.

MUSHROOMS.

Lambert's Pure Culture Spawn. Lambert's Pure Culture Spawn is far superior to the old style variations and much better results can be obtained from its use. With every order of Mushroom spawn we send free of charge complete instruction for Mushroom culture. Bricks weigh from 18 to 24 oz. A brick will Spawn ten square feet of bed. With Lambert's Pure Culture Spawn it is impossible to raise poisonous Mushrooms. Price, per brick, 25c; or post paid 35c. By express or freight, 10 bricks, $3.25; 25 bricks, $5.00. 100 bricks, $18.00.

GOURDS.

Desirable where an immense amount of vine is wanted quickly. Fine for a screen. Fruit is unique, ornamental and often useful. It will keep for years when properly ripened. Plant after ground has become warm, in rich soil.

729. Hercules Club. 4 feet long. Pkt., 10c.
730. Nest Egg. White like an egg Pkt., 10c.
735. Mixed. All varieties except Calabash. Pkt., 10c.
738. Collection. 1 Pkt., each of 8 varieties for 65c.
LETTUCE

Cultivation. Sow in the house or in frames any time after March 10th; if put outdoors, as early in the spring as ground can be worked and at intervals of two weeks till June 1st. Soil should be a rich sandy loam with plenty of humus. Rows to be 1 ft. apart, plants two inches apart in row after thinning. Two ounces of seed will sow 100 feet of row. 4 to 5 lbs. required per acre. For later treatment see note at foot of page 41.

HEADING VARIETIES.

765. Northrup, King & Co.'s “Sterling.”

Sold only in sealed packages.

This is the grand Lettuce delights all who grow it. It is equally suited for the market gardener and the private planter. The market gardener will find that this Lettuce will command a premium over other sorts on account of its appearance and quality, while the private gardener no other Lettuce approaches it for table use. For salads it is unequalled.

Our Sterling Lettuce comes under the “crisp heading” class. The plants attain quite a large size, but are never coarse. The outer leaves are of a beautiful green, changing toward the center of the head to a rich golden yellow. In flavor it is extraordinarily sweet and crisp, and is of such beautiful appearance and superior quality as to cause universal remark. We never give the name “Sterling” to a variety that is not the very best of its class, and purchasers may rely on finding this Lettuce the best they ever put on the table.

Pkt., 50c; oz., 20c; 1 lb., 55c; lb., $1.75.

(Sold only in sealed packages.) This is one of the very best of the “butter” head Lettuces. It is a very great favorite with market gardeners and holds the lead in point of popularity. Large pkt., 5c; oz., 10c; 1 lb., 45c; lb., $1.00.

785. Big Boston. A large heading, forcing sort, very hardy and vigorous, with broad, comparatively smooth, thin and very hard, bright green leaves. Quite tender. Indoors this forms a solid head, while outside it is less distinctively a heading sort. Pkt., 5c; oz., 10c; 1 lb., 45c; lb., $1.00.

787. Black Seeded All Seasons. This variety is of very large, pale green leaves and a large, round head of splendid quality. Very crisp and tender, having that “buttery” quality so much liked. Resists heat exceptionally well, and as its name implies may be grown in the open from early until late in the season. Pkt., 5c; oz., 20c; 1 lb., 75c; lb., $2.00.

780. Black Seeded Tennis Ball Lettuce.

One of the best for forcing or early outdoor planting. Plants medium size, having thick, dark green leaves. When grown, forms solid heads which are crisp and tender. Pkt., 5c; oz., 10c; 1 lb., 25c; lb., $1.00.

795. Crisp as Ice. The heads are large and very solid. When cut open they have a rich, creamy heart and are so tender and brittle as to warrant the name, “Crisp as Ice.” Pkt., 5c; oz., 10c; 1 lb., 45c; lb., $1.25.

800. Deacon. OR SAN FRANCISCO MARKET. While this sort does not grow so large as some sorts, it has few outside leaves, grows very solid, and has that delicious, buttery flavor so much sought for and esteemed. The center of the head blanches to a bright yellow shade and is very crisp and tender, remaining so for a long time, even in hot weather. One of the finest sure-heading summer sorts. Pkt., 5c; oz., 10c; 1 lb., 45c; lb., $1.25.

810. Golden Queen. An early sort. One of the best for outdoor planting, as well as growing under glass. The color is a beautiful golden yellow. The heads are so solid that there is no waste. Pkt., 5c; oz., 10c; 1 lb., 45c; lb., $1.50, postpaid.

820. Iceberg. Has an unusually solid head. The white, main ribs of the leaves curve toward the center, which keeps the interior thoroughly bleached. It is quick growing and always crisp and tender whether propagated in early spring or in the hot days of summer. Pkt., 5c; oz., 10c; 1 lb., 45c; lb., $1.25.

May King Lettuce.

790. California Cream Butter. Forms round, crisp, solid heads of buttery flavor, medium early. One of the best summer varieties of head Lettuce. Large pkt., 5c; oz., 10c; 1 lb., 30c; lb., $1.00.
LETTUCE

HEADING VARIETIES.

825. Improved Hanson Head. The Hanson is one of the most valuable of the crisp heading sorts, in all respects one of the very best out-door varieties for both the professional and amateur gardener. This variety is very hardy and will stand extremes of weather better, perhaps, than any other of the "crisp heading" sorts.

In color it is of an attractive green. The head which attains a large size, is hard, tender and crisp, with a blanched appearance in the center.

The table quality is excellent, wholly free from bitterness and remains in splendid condition for use long after it has reached maturity. Pkt., 5¢; oz., 15¢; ½ lb., 40¢; lb., $1.25.

830. May King. An unequaled variety for early spring planting, grown in the open ground, exceptionally early, attaining a size suitable for use before other sorts. Also good for forcing. It is extremely hardy and very quick growing. The plants grow six to seven inches in diameter, with the outer leaves folded closely, forming the plant into a solid head. The outer leaves are light green, slightly tinged with brown; the inner leaves are bright yellow and of a fine, silken, buttery flavor. Each head will weigh nearly a pound on the average. Pkt., 5¢; oz., 15¢; ½ lb., 40¢; lb., $1.25.

837. Tenderheart. A large, new early head Lettuce. Plants are uniform, and nearly all head with but few outside leaves. Very attractive and appetizing as well as being very tender, crisp, succulent and sweet. Tenderheart is very hardy and will withstand the early summer heat splendidly. Will remain in head without running to seed; for two weeks after it is fully headed up. The color of the outside leaves is pale green with a slight reddish brown tinge. Pkt., 5¢; oz., 25¢; ½ lb., 75¢; lb., $2.50.

Fertilizers for Lettuce.

To grow the best tender Lettuce it is advisable to have a very rich, friable soil. The quality of this vegetable is largely dependent upon the rapidity with which it is grown, this depending largely upon the proper growth and thorough preparation of the land. We recommend for this purpose, Northrup, King & Co.'s Sterling Garden and Lawn Fertilizer and Sheep Manure, listed on pages 163 and 164.

LOOSE LEAVED VARIETIES.

815. Grand Rapids. The most popular variety for green- house planting. It will make a quick growth even under adverse conditions. It is of handsome appearance, a strong grower and not subject to rot. When exposed for sale it keeps from wilting longer than other varieties. Its upright habit of growth permits close planting. Pkt., 5¢; oz., 15¢; ½ lb., 35¢; lb., $1.50.

827. Black Seeded Simpson. One of the best, either for forcing under glass or for open ground culture. It forms large, thin, loose leaves of light green color, very tender, crisp and of fine quality. A fine sort for summer, as it withstands the heat; also for the home garden. Pkt., 5¢; oz., 10¢; ½ lb., 35¢; lb., 90¢.

820. Early Curled Simpson. A popular sort, free from bitterness; forms large, loose heads. Pkt., 5¢; oz., 10¢; ½ lb., 30¢; lb., $1.00.

ROMAINE, COS OR CELYER LETTUCE.

817. Paris White Cos. A very distinct variety of Lettuce, having large, elongated, compact heads, that Blanch mild and crisp. The plants are of erect growth; forming a tall, single hanging bunch of large, crisp leaves. Pkt., 5¢; oz., 10¢; ½ lb., 45¢; lb., $1.50.

Culture for Head Lettuce.

Assuming that the Lettuce plants have been started as suggested at the top of page 42, they should be transplanted as soon as they begin to crowd. Place them six inches apart in the row in extra rich soil and if the sun has become very hot, it will be best to furnish partial shade. Keep the soil well cultivated around the plants to destroy weeds and preserve a soil mulch. Water frequently during dry weather.

When the heads start to develop work up the soil around them so as to induce close, compact growth. As soon as the outside leaves are large enough they should be brought together and tied over the top with raffia. This should be done more loosely than with Cauliflower and the plants must be closely watched so that they can be used at the right stage of development.

The heads, once in this manner helps to Blanch them and make them deliciously tender and crisp.
Northrup, King & Co., Seedsmen, Minneapolis, Minn.

MUSKMELON

Culture. Muskmelons delight in moderately rich, light, warm, mellow loam. The seed should be planted in the spring upon the arrival of settled warm weather. Plant seeds 1 inch deep in hills, 4 to 6 feet apart each way, and as soon as the plants begin to run, remove all but 4 of the most likely ones.

Cultivate and keep free from weeds until the vines prevent.

Two to three pounds of seed required per acre.

915. Northrup's Yellow Meated Japan.

[Image]

This Melon, found on the bill of fare of the leading hotels and restaurants of America, has become world famous for its sweet, juicy, delicious flavor which is of captivating charm. This variety is a very hardy, prolific grower. The seeds are extremely hardy, black. The fruit is a large, round, yellowish-green melon, weighing 5 to 6 pounds. The skin is thick and tough, and the flesh is a rich, sweet, salmon-colored flesh. It is extremely rich, sweet and highly flavored. We know of no other variety which will give as much satisfaction or prove as fruit as our Yellow Meated Japan Muskmelon. See illustration at right. Large pkt., 5c; oz., 20c; ½ lb., 20¢; lb., $1.50.

Rocky Ford Cantaloupes.

This Melon, found on the bill of fare of the leading hotels and restaurants of America, has become world famous for its sweet, juicy, delicious flavor which is of captivating charm. This variety is a very hardy, prolific grower. The seeds are extremely hardy, black. The fruit is a large, round, yellowish-green melon, weighing 5 to 6 pounds. The skin is thick and tough, and the flesh is a rich, sweet, salmon-colored flesh. It is extremely rich, sweet and highly flavored. Best Melon I Ever Grew.

The Yellow Meated Japan Muskmelon, of which I got the seed of, is the best melon of its class I ever grew either for home or market, and I have grown melons for forty years.

W. T. BERRY, Virginia, Ill.

916. Rust Resistant Pollock. This type is the highest development, both as to netting and rust-resistant qualities, yet attained in the Rocky Ford Cantaloupe. When vines of some varieties are entirely killed by rust and blight within two weeks after the shipping season, the vines are green and continue to blossom and set fruit until frost. The Melons run very uniform in size and exceptionally heavy netting is interlaced over the entire surface, making it an ideal shipper. The flesh is green, shading to a golden color under the skin of the seed cavity which is unusually small. The melon is sweet and fine-grained, flavor unexce- celled. While a few days later than the Early Watters, it is more prolific. Desirable where there is an excessive rainfall. Pkt., 5c; oz., 20c; ½ lb., 20¢; lb., $2.00.

917. Netted Rock. This strain represents the highest possible attainable quality in netting and rust-resistant qualities of the Cantaloupe. The flesh is green, tinged with a delicate salmon pink around the seed cavity, which is the smallest of any strain Rocky Ford. The flesh is firm but not tough orstringy, sweet, juicy, melting and superb flavor. Pkt., 5c; oz., 20c; ½ lb., 20¢; lb., $2.00.

918. Early Watters, Improved.

The earliest of all the Rocky Ford Cantaloupes. It is prolific and usually the first setting of the fruit, is very heavy, mostly ripening at the same time. It is of fine shape and size and inclined to run to solid netting. The flesh is light green and of the best quality. The seed cavity is larger than in the other strains, and does not make as good a shipper, but for home use is very desirable. Not recommended for sections having excessive rainfall as the vines are inclined to rust, but where early Melons are an object or for dry localities under irrigation it is the most valuable Cantaloupe. Pkt., 5c; oz., 20c; ¼ lb., 25¢; ½ lb., 30¢.

Book on Melon Culture. By James Troop. A very complete treatise on both the Melon culture and marketing, cultivation, varieties, harvesting, packing, shipping, etc., are all fully discussed, 100 pages, cloth bound. Price, 50c, (postpaid, 55c).

Book on Gardening for Young and Old. By Joseph Harris. Of especial value in the conduct of a garden, with chapters also on flowers and will prove valuable to all members of the family. 191 pages, cloth bound. Price, $1.00, (postpaid, $1.25).

Book on How to Plan the Home Grounds. By Samuel Parsons, Jr. A valuable guide to amateurs in arranging grounds, shrubs, trees, flowers, etc. Price, $1.50, (postpaid, $1.65).

Book on Agriculture for Young Folks. By A. D. and E. W. Wilson. Of great value in interesting boys and girls in the farm. Very practical. This book is used in many schools for the teaching of elements of agriculture. 360 pages, illustrated, cloth bound. Price, $1.00, postpaid.

Early Watters, Improved.
MUSKMELON

920. Burrell's Gem. This new Melon is without question unsurpassed in quality, size and shape as a shipping variety. It has a thin tough rind, the ribs of which are closely spaced and the average length is six inches, by four and one-half inches in diameter. They weigh about two and one-quarter pounds each. The reddish orange flesh is very thick, fine-grained and spicy and of a flavor unexcelled by any other Melon. So great has been the demand for this variety by commission houses that growers are unable to keep it in stock. Pkt., 5c; oz., 15c; 1/4 lb., 40c; lb., $1.25.

925. Defender. One of the best yellow fleshed sorts, and in some respects is superior to all others. The Melons are medium sized, oval in shape, slightly ribbed, and covered with gray netting. The flesh is firm, fine-grained, rich, deep yellow and of high flavor. The rind is very thin, but is very hard and firm, making it an exceptionally fine shipping variety. The vine is vigorous and very productive. Pkt., 5c; oz., 15c; 1/4 lb., 40c; lb., $1.25.

930. Early Netted Gem. Slightly oval in form; finely netted, being a light golden hue when fully ripened. Flesh light green in color, ribbed and netted close to the skin. Pkt., 5c; oz., 15c; 1/4 lb., 30c; lb., $1.00.

935. Emerald Gem. Very early. A richly flavored Melon, salmon colored flesh which is almost crystal in appearance, the flavor being rich, very sweet and juicy. The skin is quite smooth, and of a beautiful deep green color. A variety is very prolific and is one of the most valuable sorts in cultivation. Pkt., 5c; oz., 20c; 1/4 lb., 50c; lb., $1.75.

940. Extra Early Citron or Early Nutmeg. A standard and well known variety. Fruits are round, 6 to 8 inches in diameter, ribbed and netted. Flesh is thick and pale green in color, very sweet. Pkt., 5c; oz., 15c; 1/4 lb., 50c; lb., $1.50.

945. Extra Early Hackensack. Fruit attains a good size, weighing four to six pounds each. The Melons are round, heavily ribbed; skin is green and thickly netted; flesh is light green, of delicious flavor, rich and sugary. It is a luxuriant, healthy grower, and exceedingly productive. The earliest of all large netted melons. Pkt., 5c; oz., 15c; 1/4 lb., 50c; lb., $1.50.

947. Grand. A week to ten days earlier than Osage. Flesh is salmon-colored, firm, fine-grained, thick, melting and delicious. An extra good shipping sort. Melons about six inches in diameter. Very productive. Pkt., 5c; oz., 20c; 1/4 lb., 60c; lb., $2.80.

950. Hackensack or Turk's Cap. Fruits very large, round, heavily ribbed and netted. Flesh green, thick, coarse, very sweet and fine flavor. Hardy and very productive. Pkt., 5c; oz., 15c; 1/4 lb., 45c; lb., $1.35.

959. Melon Peach. Also known as Vegetable Peach. Vegetable Peach and Mango. The fruit is about the size of a large peach, oval-shaped and of a bright orange color, somewhat russeted. When first ripen the fruit falls from the vine, then they are quite hard with little taste, but soon become melon-like and fit for use. Melon Peaches are not eaten raw, but are fine for preserves, pies, pickles, etc. For this purpose they are delicious if first peeled and seeds removed, then cut in thick slices. For preserves treat like any fruit, using half sugar and half fruit. A little lemon essence or a few pieces of sliced lemon. For pies, slice and season the same as green apple preserves, using top and lower crusts and bake slowly. This new pie when first eaten will not be soon forgotten. Melon Peaches are very easily grown, same as Melons and are very productive. Pkt., 10c; oz., 25c.

955. Garden Lemon. Resembles very much in habit the growth the Melon Peach. The fruit is round, somewhat smaller than the Melon Peach; has thinner flesh, and is decidedly more acid in flavor. Pkt., 10c; oz., 25c.

977. Cassaba Melon. Cassaba Melons are a little different from both Muskmelons and Watermelons. The skin is smooth and hard, the flesh is dense, rich, sweet and juicy. Pkt., 5c; oz., 15c; 1/4 lb., 50c.

Went Wild Over Them The Melon Peaches used to grow. Everyone who tasted them were wild over them.

G. M. Firth, Claremont, Minn.
WATERMELON

Culture. The soil for Watermelons must be light, rich, and sandy, for if grown on a heavy soil the quality will be poor, and they will not be so early. When there is no more danger of frost, drop 8 to 10 seeds in hills 8 to 10 feet apart, each way, covering about 1 inch deep. As soon as plants commence to run, thin out to 3 best plants in a hill and cultivate until the vines cover the whole ground. If slow to fruit, pinch off the ends of the growing shoots. Ashes or alkalized lime sifted on the young plants while dew is on is good to keep the insects out. One ounce will plant about 30 hills, and it requires 4 to 5 pounds to one acre.

850. Northrup, King & Co.'s Klondike. (Sold only in sealed packages.) The earliest. The greatest object to the extremely early Watermelons has been their inferior quality. This has been entirely overcome in the Klondike, which is offered with the assurance of being, not only remarkably early, but as sweet, delicate and melting in flavor as any variety grown. The flesh is of a deep scarlet. Rind thin, and on this account is not a particularly good shipping sort, but is emphatically the variety for home use and sale. It will ripen in latitudes where it has not been thought possible to mature a good Watermelon. Pkt., 5c; oz., 15c; 1 lb., 40c; lb., $1.25.

855. Northrup, King & Co.'s Kentucky Wonder. (Sold only in sealed packages.) One just cause for criticism of many of the new Melons is that, for the most part, they have been, at the best, slightly improved strains of some old and well known sort. This cannot be said of Kentucky Wonder. It is distinct, and the Melon itself proves it. In shape it is oblong, attaining a good size; skin dark green and beautifully marked. Flesh a beautiful rich scarlet color, crisp, rich, sugary, always firm and solid, never mealy or tough. Pkt., 5c; oz., 10c; 1 lb., 30c; lb., $1.00.

860. Dark Icing. Rind thin, but very strong; one of the best for early shipping. Fruit large, very dark skinned and of attractive appearance. Flesh, rich, bright red, and of fine quality. Pkt., 5c; oz., 10c; 1 lb., 25c; lb., 75c.

865. Fordhook Early. An extra early Watermelon of large size. The rind is tough, making it desirable for shipping purposes. Flesh is bright red and very sweet. Pkt., 5c; oz., 10c; 1 lb., 25c; lb., $1.25.

870. Harris' Earliest Watermelon. Sweetest, largest and most uniformly ripening early Melon. Melon oval to oblong; beautifully striped with green and gray; bright red flesh, which is sweet, tender and delicious. It is the Melon for everybody who wants to be first in the market with fine large Melons weighing 20 to 30 pounds. Pkt., 5c; oz., 10c; 1 lb., 25c; lb., 75c.

875. Ice Cream or Peerless. Rind thin, medium size, richly marked green. Flesh bright scarlet. Solid to the center. Sweet as honey. Pkt., 5c; oz., 10c; 1 lb., 25c; lb., 65c.

880. Kleckley's Sweets. The finest of all medium early Watermelons for home use. The rind is too thin and tender to stand long distance shipment. The fruits are uniform in size, oblong in form, the skin is a rich dark green, the flesh, bright scarlet, the seeds lie close to the rind, leaving a very large, solid, red core. The flesh is rich, sugary and melting, entirely free from stringiness. Pkt., 5c; oz., 10c; 1 lb., 25c; lb., $1.25.

885. Kolb's Gem. A very large, slightly oval, striped with light and dark green. Flesh very hard and firm. Flesh bright red, solid, coarse grained, but tender and sweet. Pkt., 5c; oz., 10c; 1 lb., 20c; lb., 65c.

890. Mammoth Ironclad. Large fruits nearly two feet long. Skin dark green with lighter stripes. Rind thin but exceptionally tough. Flesh bright red, firm, solid and crisp but rich and sugary. Pkt., 5c; oz., 10c; 1 lb., 25c; lb., 75c.

895. Phinney's Early. Very early, very good quality. Bears abundantly, medium sized, oblong melons with thin, smooth rind; flesh pink and tender. Pkt., 5c; oz., 10c; 1 lb., 25c; lb., 75c.

900. Sweetheart. Remains in condition for use longer than any other sort. Fruit early, large, oval and very solid. Flesh bright red, tender and sweet. Rind thin, but strong, making it a good shipper. Pkt., 5c; oz., 10c; 1 lb., 25c; lb., 75c.

905. The Dixie. This Watermelon is the best and most popular Melon known, being even earlier, larger and far more productive than the Kolb's Gem, which has therefore been devoted to shipping. Pkt., 5c; oz., 10c; 1 lb., 20c; lb., 65c.

908. Tom Watson. An oblong melon of the skin of which is dark green, with thick netting on the entire surface, quite distinct from other varieties. It averages 18 to 24 inches long and 10 to 12 inches in diameter and weighs 35 to 40 pounds. The rind is thin but tough and flesh is a bright, attractive red color, crisp, sweet and delicious. The leaves are large with no cores. The seeds are brown, tipped with white. The appearance and quality of this Melon make it desirable for both home and market use. Pkt., 5c; oz., 10c; 1 lb., 25c; lb., $1.25.

867. Golden Honey. A beautiful, golden-fleshed Melon, one of the finest we ever tasted. The flesh is a beautiful, chiseling amber yellow, very tender, and has a most delicious flavor. It is medium early, of uniform large size, oblong shape and of handsome appearance. The rind is light green, with mottled stripes. Some are more or less pronounced, and some yellow-fleshed Melon, but this variety will disappear once the Golden Honey is tasted. This Melon has no hard core or stringy sections. The rind is thick and the seeds are large and white, some having a small black tip. Pkt., 5c; oz., 10c; 1 lb., 25c; lb., $1.25.

910. Citron for Preserves. Fruit round and smooth. Is not eaten raw, but is used for making a very clear, transparent preserve of peculiarly fine flavor. Pkt., 5c; oz., 10c; 1 lb., 25c; lb., $1.00.

Special Note. All vegetable seeds sent pre-paid except where noted. See page one for suggestions to customers, parcel post rates, shipping seasons, freight claims, etc.
SOLD ONLY IN SEALED PACKAGES. This beautiful strain of Red Globe Onion surpasses all others in earlyness, productiveness, perfection of shape, uniformity of size, richness of color, and long keeping qualities.

For years we have been patiently working to improve our Red, Yellow and White Globe Onions, not only by reducing the size of the neck, but also rounding off the projecting bottom, while at the same time giving due attention to the shoulder of the bulb. This has resulted in a true globe-shaped Onion of great solidity and long-keeping qualities; the very small neck not only prevents water-logging, rot and shrinkage, but also insures early maturity and perfect ripening down.

The color of Minnesota Red Globe is a deep blood-red, extra dark, while the surface is smooth and glossy. The flesh is white, tinged with light purple, fine grained and unsurpassed in flavor.

Many of the largest growers in the United States have annually used our Minnesota Red Globe Onion seed for more than a decade, convinced that Northrup, King & Co.'s strain is unequalled for the North.

For a long time Onions have been the biggest money-making crop for the farmer. It is true that the Onion market has its ups and downs, like all produce, but at the average price of about 5c. per bushel in the Autumn, and the ordinary yield of 400 to 500 bushels per acre, onions yield highly satisfactory returns to the grower. One often reads glowing accounts of enormous Onion profits, yields of 600 to 1,000 bushels are unknown. With intensive cultivation, experience and skill these yields are within the reach of all in a normal year.

Everywhere globe Onions bring the best prices and since our Minnesota Red, Yellow and White strains are the most highly developed of all globes we confidently recommend them to growers who want Onions to sell. The Red Southport is perfectly globe-shaped and very handsome in color. The Onions measure from two and a half to three and a half inches in diameter, and are very uniform both in size and shape. Our seed has been selected to thin neck plants which ripen down to a hard, solid ball, producing the largest proportion of marketable Onions. They are also good keepers. The globe varieties, as a rule, yield the largest crops, from 800 to 1,000 bushels an acre being reported frequently. The Red Globe meets with the greatest demand in the Northwest. Pkt., 5c; oz., 25c; 1/4 lb., 75c; lb., $2.50.

1085. Southport Red Globe.

In all markets, globe Onions are in greatest demand, being of such shape there is practically no waste. The Onion which is perhaps the best known throughout the United States is the Southport strain. The Red Southport is perfectly globe-shaped and very handsome in color. The Onions measure from two and a half to three and a half inches in diameter, and are very uniform both in size and shape. Our seed has been selected to thin neck plants which ripen down to a hard, solid ball, producing the largest proportion of marketable Onions. They are also good keepers. The globe varieties, as a rule, yield the largest crops, from 800 to 1,000 bushels an acre being reported frequently. The Red Globe meets with the greatest demand in the Northwest. Pkt., 5c; oz., 25c; 1/4 lb., 75c; lb., $2.50.

1025. Large Red Globe.

A handsome, dark red, globe-shaped Onion. It averages three inches in diameter and six to seven inches in length. The bulbs have thin necks, which ripen down forming a hard, solid, globular bulb. This is a fine strain which will please all who grow it. Pkt., 5c; oz., 25c; 1/4 lb., 75c; lb., $2.50.

1015. Large Red Wethersfield.

Very popular, a sure and heavy yielder; the best keeper. Grows to an immense size, solid, oval-shafted; top flat, strong on top; skin purplish red, smooth and glossy; flesh white, slightly tinged with pink, strongly flavored. The best variety for poor or dry soil. Pkt., 5c; oz., 25c; 1/4 lb., 75c; lb., $2.50.

1020. Extra Early Red Flat.

A medium sized flat variety, goodyielder. Ready for use about two weeks earlier than Large Red Wethersfield. Fine grained and mild in flavor. Very desirable for early marketing. Best when sown in the fall. Pkt., 5c; oz., 25c; 1/4 lb., 75c; lb., $2.50.

1105. Red Bermuda.

Bulbs of this variety are similar in form and early ripening to the Bermuda White, but grow larger in size, ranging from three to four inches in diameter; very flat and of a light pink color. The flesh is white, slightly suffused with pink. Pkt., 10c; oz., 25c; 1/4 lb., 75c; lb., $2.50.

CULTURE.

Soil for Onions should be rich in humus and plant food. Fresh stable manure and barnyard litters are entirely out of place on the Onion field. They are usually loaded with weed seeds and will interfere very much with tillage. Compost heaps will destroy the weed seeds and put the manures in such condition that they will readily mix with the soil. Manure from sheep sheds or pig pens applied with a spreader before the ground is plowed in the fall makes excellent fertilizer for Onions because it is usually comparatively free from litter and fowl seeds.

We especially recommend our Sterling fertilizer for this crop. See page 117 for description and prices. This should be applied at intervals during the season.

All vegetable and flower seeds sent prepaid except where otherwise noted.
ONION

YELLOW VARIETIES.

1010. Northrup, King & Co.'s Minnesota Yellow Globe. Sold only in Sealed Packages. We have for years been working on the popular Yellow Globe Onion to bring it to the same degree of perfection attained by our Minnesota Red Globe and we now feel that we have succeeded in producing a type of Yellow Globe unequaled by any other strain in existence. It is a large globe shaped Onion of the same general characteristics as our Minnesota Red Globe and will never prove a disappointment to the grower. If yellow Onions are preferred, try this strain. Pkt., 25c; oz., 45c; ½ lb., $1.00; 1 lb., $2.50.

1080. Northrup, King & Co.'s Prize Taker. Sold only in Sealed Packages. This Onion has become a great favorite on account of its large size and great solidly. It is perfectly globe-shaped, with scarlet colored skin; the necks are very small and the onions always ripen up hard. An excellent keeper, exceedingly fine flavor, grows to an enormous size, Onions weighing five pounds having been grown from the seed the first year. Pkt., 5c; oz., 30c; ½ lb., 65c; 1lb., $2.00.

1095. Southport Yellow Globe. Very similar to the Southport Red Globe, except that it averages a trifle smaller and matures a little earlier. The skin is a rich brownish yellow; the flesh white, crisp, and fine grained. Great care has been given to the selection of our seed, so as to give uniformity of size, shape, small necks and heavy yield. Pkt., 5c; oz., 25c; ½ lb., 65c; 1 lb., $2.00.

1120. Long Keeping Australian Brown Onion. This remarkable Onion is of medium size, wonderfully hard and most attractive for market, both in form and appearance. They are extremely early in ripening and make no stiff necks or scallions. Every seed seems to produce a good-sized Onion, and the bulb begins to form very quickly when the plant is not over 2 inches high. Planted with the Red Wetherfield it will average nearly four weeks earlier, and ripen off more uniformly. It has the reputation of keeping indefinitely, and we think from its firmness and hardness that it will keep in good condition longer than any other Onion known. The color of the skin is a clear amber-brown. These Onions have been known to keep nearly a whole year in good condition, and on this and other accounts it will command itself to onion set growers, who often lose heavily in carrying their crop because the sets do not keep. Pkt., 10c; oz., 25c; ½ lb., 75c; 1 lb., $2.50.

1035. Yellow Danvers Flat, or Round. Very productive, good for both market and seed. Medium size, round, flat, early. Very reliable, small neck; thin, pale yellow skin. Flesh white, fine grained and mild. Pkt., 10c; oz., 25c; ½ lb., 75c; 1 lb., $2.00.

1040. Yellow Danvers. Round and globular, with very thin neck; rich orange yellow color. An excellent orner and a fine keeper. Flesh white and mild. Pkt., 5c; oz., 25c; ½ lb., 65c; 1 lb., $1.50. Excellent Satisfaction.

Your Yellow Danvers Onion seed gives excellent satisfaction. G. ROBSHEISEN, Orient, Wash.

1045. Yellow Strasburg or Dutch. Later, darker in color and more flat than Yellow Danvers Flat. Flesh pure white and of mild flavor. The best variety to grow for sets, and is a splendid keeper. Pkt., 5c; oz., 25c; ½ lb., 75c; 1 lb., $2.00. Buy Early. Seed of high-grade Yellow and Red Globe Onion is again in short supply this season. We urge customers to place orders early.

Special Notice. Those intending to sow one or more acres of Onion seed this season should write us for special prices on large quantities of seed. Be sure to state varieties wanted and quantities of each.

1093. Ohio Yellow Globe. A very desirable strain of yellow globe-shaped Onion. The main features which distinguish this strain from others are its distinct and attractive shape; handsome, bright, even color; ripens early and all at once; necks very small and cure down very close. The bulbs are firm and solid and keep exceptionally well during the Winter. The yield, size and quality are all that could be desired in a yellow globe Onion. Although this strain was first introduced in Ohio, the seed we offer is thoroughly acclimated and is suitable for northern conditions. Pkt., 5c; oz., 20c; ½ lb., 60c; 1 lb., $2.00.

Fertilizers.

The two principal fertilizers for Onions are Nitrate of Soda and Muriate of Potash; the latter being used on muck lands. Nitrate of Soda furnishes the young plants with the most essential plant food, nitrogen, in soluble form. For fertilizers of all kinds see pages 162 and 163.

Garden Tools.

We handle a full line of Planet Jr. Garden Drills and Cultivators, also weeder, hand cultivators, etc. See pages 160 and 161.

Booklet on Onion Culture. A 24 page treatise on Onion raising from seed to marketing. In concise, intelligent language it tells of soil selection and preparation, fertilizers and how to apply them, cultivation, varieties of seed to sow, the new seed culture and methods of seeding, weeding, harvesting, storing, marketing and grading. This little book has assisted many Onion growers to earn increased profits. We will send it free with orders when requested, or will send it by mail, postpaid to any address for 5c in stamps. The New Onion Culture. By the author. A complete guide on the growing of onions with the greatest profit. Price, 5c. (postpaid 25c).
ONION
WHITE VARIETIES.

Culture. — Onions thrive well in any good soil, although sandy soils are apt to dry out to too great an extent. Probably the very best soil for this purpose is old land that has been kept up to a high state of fertility and free from weeds, fall plowed and thoroughly pulverized in the Spring. Snow the seed early in the Spring about ½ inch deep in rows 12 to 15 inches apart. The soil should be free of weeds, and as soon as the seedlings appear they should be thinned. Cultivate and hand weed every two weeks throughout the Summer so as it is much easier to handle the crop in the Fall when entirely free from weeds.

One oz. of seed for 100 feet of row; 3 to 4 lbs. seed per acre.

1003. Northrup, King & Co.'s Minnesota White Globe. Sold only in Sealed Packages. White Globe onions are the mildest of flavor, and purest in color of any White Globe type. This is in every way the finest White Globe onion in existence. Pkt., 10c; oz., 35c; ½ lb., $1.00; lb., $2.50.

1099. Southport White Globe. White Globe onions are so hardy and productive they are recommended for all but the mildest regions of the United States for early planting. Southport White Globe Onion command the highest market prices when they are true globe-shaped and free from stunts. Our Southport White Globe Onion meets these requirements, having a thin skin of pure white, clear mildness of flavor. This is probably the finest onion grown in America. The flesh is crisp, fine grained, very white and mild. As soon as the bulbs are in, the color should be stored in a cool, dark shed or dry cellar. Pkt., 10c; oz., 35c; ½ lb., $1.25; lb., $4.00.

1100. Crystal White Wax Bermuda. This new variety bears large, flat onion, which has a silvery skin, with the large grower's onions in the South, especially in southwestern Texas. It does very well under northern conditions and produces one of the mildest and sweetest of all. It is very fine for slicing, and the color being so clear and pure. The best stock is produced in Teneriffe, Canary Islands. Our stock is genuine. Pkt., 10c; oz., 40c; ¼ lb., $1.25; lb., $4.00.

1105. Paris White Silver Skin. An early, sm 111. Excellent for bunching and pickling. Pkt., 5c; oz., 20c; ½ lb., $1.50; lb., $4.00.

1108. White Lisbon. A large, round, white onion of excellent quality. An exceptionally early variety, fine for using green or bunching. Pkt., 5c; oz., 20c; ½ lb., $1.50; lb., $4.00.

1106. White Pearl or Extra Early Bloomsdale. While originally from Europe this is now fairly entitled to rank as an American variety. It is pure silvery-white onion of very quick growth, frequently maturing in seventy days from sowing the seed. Bulbs are flattened, of medium size, with silvery-white skin; flesh crisp and mild in flavor. This variety is largely planted for bunching for sets. Pkt., 10c; oz., 25c; ¼ lb., 85c; lb., $2.50.

1103. White Barletta. A very hardy, perennial variety of Onion that is excellent for bunching and early green onions. Much superior to the Egyptian Onion, which grows a tough woolly stem. This Onion is entirely free from this objection. Seed sown thinly in rows 12 to 16 inches apart. It is serious with thinning onion out early Spring. Seed may be sown in late Summer or early fall months for early spring onions. Pkt., 5c; oz., 25c; ¼ lb., 85c; lb., $2.50.

1107. White Queen. Small; noted for extreme earliness and mildness of flavor. Bulbs average about an inch in diameter and are much used for pickling. Pkt., 5c; oz., 20c; ¼ lb., 65c; lb., $2.00.

Egyptian Winter, or Red Perennial Onion Sets.

1125. Mammoth Silver King. In appearance, the most striking Onion grown. We hardly know which to commend the most, its large size, symmetrical appearance and beautiful, silvery flesh or its sweetness, tenderness and mild flavor. These qualities make it the best for exhibition and fancy high-priced trade. Not recommended for the extreme North except for bunching. Pkt., 5c; oz., 25c; ¼ lb., 75c; lb., $2.00.
ONION SETS

We are Headquarters in the Northwest for Strictly No. 1 Northern Grown Onion Sets.

The Importance of Using Northern Grown Onion Sets.

The planting of Onion Sets is increasing rapidly year after year. They are used for several purposes. The Bottom Onion Sets produce a large onion ready for market from four to six weeks earlier than can be had by sowing the seed and the product of the set is the same as that obtained by sowing seed. This enables the grower to sell his entire crop earlier in the season, at which price usually are higher than when the bulk of the crop reaches market. It also permits the sowing of another crop on the land the same year. Bottom Sets also produce good green Onions on most any soil in half the time it takes to raise them from seed.

Bottom Onion Sets are produced by sowing seed very thickly and they are harvested before they have reached full development. Our sets are small, one inch or less in diameter, dry and unsprouted. Multiplier Onion Sets are formed through the division of the bulbs into many smaller ones; they are not grown from seed.

Red Top Sets are produced like seed on the top of the stalks. Top Sets make large bulbs one year and top sets the next.

We grow our own Onion Sets which enables us to produce hard, sound, clean sets of the best quality. As they are used to obtain Onions earlier than they can be had from seed, it follows, therefore, that Northern grown sets will produce Onions earlier than Southern grown sets. We clean them thoroughly so as to be free from trash and rubbish, which is so often included with many of the Onion Sets ordinarily sold. In the Spring of the year our sets are hard and sound, while at that time Southern sets are very often so dried and shriveled and so lifeless that they either grow slowly or fail entirely to make a bulb.

About Prices. Since the value of Onion Sets fluctuates greatly, our prices are subject to minor changes. The prices below are those existing at the time of publication. Top sets weigh 25 lbs. per bushel, all others 22 lbs. per bushel. All transportation charges on sets sold at the wholesale are at the discretion of the purchaser, except where quoted post-paid. For methods of packing Onion Sets see below.

White Bottom Sets. These are small, solid and of a beautiful silvery white, a favorite sort in private and market gardens. 

Red Bottom Sets. Northern grown, bright, deep red in color, even and dry. The most popular variety. 

Yellow Bottom Sets. Produced from seed which makes the finest yellow sets. Fine and dry, the most popular set for market purposes.

Prize Taker Onion Sets. See page 40 for full description. These sets are excellent for use in the localities where the season is too short. They are very popular and are highly valued in the Greenhouse by the most fastidious grower.

Red Top Sets. These are produced to both early green and large eating Onions. We wish to call special attention to the fact that our stock is the genuine Red Top Set, unmixcd with Egyptian Winter Sets which are always cheaper, but practically worthless for spring planting. 

White Multiplier. These are of a pure silvery-white color which runs up the stem, the flavor is very sweet and mild, superior to green Onions from other sets. They are enormously productive, frequently producing as many as twenty Onions in a single cluster from one bulb planted. They are of excellent quality and size for bunching. Ready for delivery on or about June 1st. 

Yellow Multiplier. Late in June they are fully ripe, and can be gathered. They are very productive, five to fifteen bulbs growing from one bulb set out. 

Egyptian Winter or Perennial Onion Sets. See page 49.

How We Pack Onion Sets.

We will pack our Onion Sets in any way our customers desire, in bags, baskets or barrels. Prices named are based on the use of bags. If desired in barrels, we will pack three to four bushel orders and upwards at no additional charge. In our opinion the best, safest and cheapest method is to ship in bushel baskets. These will be furnished at an additional charge of 15c per bushel. In this way they carry safely to any part of the United States. The package is easily handled and perfectly ventilated, the sets are not bruised and the bales can always be found of use to the purchaser. Large buyers of Onion Sets should write us for special prices.

Culture. Soil required for Onion Seed. Place the Onion Sets 3 to 6 inches apart, according to size, 3 inches deep, in rows 1 foot apart. It is customary to furrow out the soil with a little hand plow early in the Spring, set the Onion in this furrow right side up and cover with a garden rake and if the soil is dry it should be well watered over the sets; 388 to 480 lbs. of sets required for an acre.

All Onion Sets shipped at purchaser's expense except where quoted post-paid.
PARSNIP

Culture. Work the soil very deep and pulverize the surface thoroughly. Sow the seed in early Spring, 1/2 of an inch deep, in rows 12 to 18 inches apart.

As soon as the young plants appear, cultivate and hand weed them, and when 3 inches high thin to 6 inches apart in the row.

Cultivate sufficiently to keep the soil loose throughout the season. Freezing improves the quality of Parsnips for table use, so it is customary to take up in the Fall when the ground begins to freeze what will be needed for winter use, leaving the remainder to winter over in the ground, or better still, pitting them as is often done with other roots so that access may be had to them at any time.

One oz. of seed for 300 ft. of row; 5 lbs. seed required for an acre.

1135. Northrup, King and Co.'s Sweet Marrow Parsnip. (Sold only in sealed packages.) This fine new Parsnip of English origin is offered with full confidence that it will become a prime favorite with all who use it. It is very fine grained and exceedingly sweet, while the peculiar "Parsnip" flavor is fully preserved. The roots are unusually smooth and attractive in appearance. The best of all Parsnips for the market or private garden. Pkt., 5c; oz., 10c; 1/4 lb., 25c; lb., 50c.

1140. Guernsey. (Improved Half Long.) A greatly improved strain. The roots do not grow so long as the Hollow Crown, but are of greater diameter and more easily gathered. It is a very heavy cropper. The roots are very smooth; the flesh is fine grained, of most excellent quality. Pkt., 5c; oz., 10c; 1/4 lb., 25c; lb., 75c.

1145. Improved Hollow Crown Parsnip. of this old time favorite is very smooth and fine. None better anywhere at any price. Pkt., 5c; oz., 10c; 1/4 lb., 25c; lb., 75c.

Best of Satisfaction.

All seeds received from you give the best of satisfaction, especially the Sweet Marrow Parsnip and your Sterling Beet.

(MRS.) MARY MILLS, Perry, Iowa.

PARSNIP

Culture. Work the soil very deep and pulverize the surface thoroughly. Sow the seed in early Spring, 1/2 of an inch deep, in rows 12 to 18 inches apart.

As soon as the young plants appear, cultivate and hand weed them, and when 3 inches high thin to 6 inches apart in the row.

Cultivate sufficiently to keep the soil loose throughout the season. Freezing improves the quality of Parsnips for table use, so it is customary to take up in the Fall when the ground begins to freeze what will be needed for winter use, leaving the remainder to winter over in the ground, or better still, pitting them as is often done with other roots so that access may be had to them at any time.

One oz. of seed for 300 ft. of row; 5 lbs. seed required for an acre.

1135. Northrup, King and Co.'s Sweet Marrow Parsnip. (Sold only in sealed packages.) This fine new Parsnip of English origin is offered with full confidence that it will become a prime favorite with all who use it. It is very fine grained and exceedingly sweet, while the peculiar "Parsnip" flavor is fully preserved. The roots are unusually smooth and attractive in appearance. The best of all Parsnips for the market or private garden. Pkt., 5c; oz., 10c; 1/4 lb., 25c; lb., 50c.

1140. Guernsey. (Improved Half Long.) A greatly improved strain. The roots do not grow so long as the Hollow Crown, but are of greater diameter and more easily gathered. It is a very heavy cropper. The roots are very smooth; the flesh is fine grained, of most excellent quality. Pkt., 5c; oz., 10c; 1/4 lb., 25c; lb., 75c.

1145. Improved Hollow Crown Parsnip. of this old time favorite is very smooth and fine. None better anywhere at any price. Pkt., 5c; oz., 10c; 1/4 lb., 25c; lb., 75c.

Best of Satisfaction.

All seeds received from you give the best of satisfaction, especially the Sweet Marrow Parsnip and your Sterling Beet.

(MRS.) MARY MILLS, Perry, Iowa.

1150. Dark Moss Curled. The leaves are of an extra dark green color. It is very productive, and on account of the densely curled character of its leaves a quantity can be gathered in a short time. Pkt., 5c; oz., 10c; 1/4 lb., 25c; lb., $1.25.

1160. Extra Curled or Emerald Pearl. Dwarf, fey. This is a most beautiful variety. The moss-like leaves, of a handsome dark green color, are finely curled. Pkt., 5c; oz., 10c; 1/4 lb., 25c; lb., $0.80.

1165. Fern Leaved. This is a most exquisite in form and color—suitable as a garnishing plant, and suited for mixing with dwarf ornamental foliage plants in the flower garden. Pkt., 5c; oz., 10c; 1/4 lb., 25c; lb., $0.80.

1170. Plain, or Single Parsley. Leaves flat, deeply cut but not curled. It is very dark green, is hardy and of excellent flavor, and for this reason is often preferred. It is used more for flavoring while the curled sorts are used for garnishing. Pkt., 5c; oz., 10c; 1/4 lb., 25c; lb., $1.00.

1175. Turnip or Hamlet. The edible portion is the fleshy root, which resembles a small Parsnip, and is esteemed for flavoring soups, stews, etc. The flesh is white, a little dry with the flavor of Celeriac. The foliage is the same as the plain Parsley. Pkt., 5c; oz., 10c; 1/4 lb., 25c; lb., $1.25.

Cannot Praise It Too Highly.

I have always found your garden and flower seeds thoroughly reliable, quick to germinate, and with proper care have produced fine vegetables and flowers. This is especially true of the Parsley. I see the best I ever had. I cannot praise it too highly. DOROTHY BENN, Iowa.
PEAS

HARDY, NORTHERN GROWN STOCK.

Our Peas are Northern Grown. They are produced at an altitude of 800 feet or more, making them the earliest, hardiest and most productive Peas obtainable. In addition, the facilities where they are raised are free from insects and other damaging pests. For many years we have made a specialty of Peas and now grow thousands of acres where a few years ago we grew hundreds. Much skill and knowledge is required to properly grow Seed Peas and we employ experts of long experience to handle our crops. Our Peas are carefully grown, kept true to type, are bright, handsome, sound and of strong germination.

These wishing to purchase large lots of Peas should write us for special prices, stating varieties wanted and quantities of each. We have an immense trade in Peas, extending over the entire United States and while present stocks are large, they may not be adequate to supply all demands made upon them. For that reason, we urge early orders to avoid disappointment on the part of our customers.

Bound seeded varieties weigh 60 lbs. per bushel, wrinkled sorts, 50 lbs. per bushel.

Prices. At the following prices on Peas, packets, and quarter pounds are prepaid, all larger quantities by express or freight at purchaser's expense. If wanted by parcel post add postage at rates on page one.

Cultivars for Garden Peas. Sow seed 2 to 4 inches deep in rich soil very early in the Spring and for a succession put in varieties that mature at different periods, or if dwarfs only are desired, sow a few rows every 10 days throughout the season. For hand cultivation sow in rows 15 inches apart, but if grown on a large scale it is best to sow in rows from 2 to 4 feet apart and cultivate them with a horse.

Tall growing Peas may be sown to advantage upon very clean soil or new breaking. They may be supported with a woven wire fence or poultry netting. Sow in double rows eight inches apart and stretch the wire support between the rows. Fasten securely at each end with posts using stakes between the posts.

Two lbs. of seed will plant 100 ft. of row; 115 to 140 lbs. of seed required an acre in drills, and if broadcast 175 lbs.

SIX UP-TO-DATE VARIETIES OF GENUINE MERIT
They Should be in Every Garden.

Great advances have been made in recent years in the quality of garden Peas. Anyone who has not tried some of the newer varieties can hardly appreciate how delicious these improved sorts are. Plant these six varieties and be convinced.

1382. Alderman. This is a very large podded Pea, very robust and vigorous, producing pods of the largest size. The pods are larger and longer than the average large podded sorts, and are uniform in size. The Pea is one of the best sorts of Peas of most excellent flavor. In habit, the vines are strong and branching, bearing rich, deep-green, straight, handsome pods averaging 4½ to 5 inches in length, up to the tall growing main crop of Peas. The vines grow from 3½ to 4 feet in height. A point of superiority which must not be overlooked is the unusual flavor and quality of the Pea. As true of most wrinkled varieties they are delicious, but the Alderman is of a quality surpassing many of the others. Also a good sort for shipping. Be sure to include Alderman Peas in your order.

Pkt., 15c; ¼ lb., 25c; ½ lb., 50c; 1 lb., $1.00; 10 lbs., $8.00; 25 lbs., $25.00; 50 lbs., $45.00; 100 lbs., $85.00.

1304. Dwarf Defiance. Grows about 2 feet high and matures an abundance of large, dark-green peas about mid-season. In production it compares favorably with the taller, later varieties. The Pea is large and of splendid quality, sweet and of fine flavor. Pkt., 3c; ¼ lb., 15c; ½ lb., 50c; 1 lb., $1.00; 10 lbs., $8.00; 25 lbs., $25.00; 50 lbs., $45.00; 100 lbs., $85.00.

1317. Laxtonian. A new first early of unexcelled value. It is not only early but is of splendid quality and unusually prolific. It is dwarf, growing only 15 to 18 inches in height, it excels in yield and equals in size of pod, the Gradus. The pods are deep dark green, pointed at the end, generally long and measure 4½ to 5 inches in length. The peas number 8 to 10 to the pod, are large in size and of delicious flavor. The vines are vigorous in growth, deep green in color and require no support. Pkt., 15c; ¼ lb., 15c; ½ lb., 50c; 1 lb., $1.00; 10 lbs., $8.00; 25 lbs., $25.00; 50 lbs., $45.00; 100 lbs., $85.00.

1338. Little Marvel. An extremely valuable variety, especially suited to small home gardens, and is also a splendid variety for early market gardening. It matures very early and produces large crops. The vines grow about 15 to 18 inches in height. The pods are dark green, fair sized, produced in pairs and are closely filled with seven to eight Peas of extra fine flavor. Pkt., 2c; ¼ lb., 15c; ½ lb., 50c; 1 lb., $1.25; 10 lbs., $8.00; 25 lbs., $25.00; 50 lbs., $45.00; 100 lbs., $85.00.

1275. Potlatch. A new fine variety of great merit. The vines are vigorous, growing 15 to 18 inches high, with dark green foliage. The long pods are a rich, dark green in color, often measuring six inches in length, with 8 to 10 earlets. The grain is smooth and polished and the pods are borne in pairs. It is wonderfully productive and the way they Prince out is astonishing. Potlatch matures early and is unusually satisfactory to grow. Pkt., 15c; ¼ lb., 15c; ½ lb., 50c; 1 lb., $1.25; 10 lbs., $8.00; 25 lbs., $25.00; 50 lbs., $45.00; 100 lbs., $85.00.

1342. Richard Seddon. The pods are deep green, crowded with from 7 to 9 large Peas of very fine color and flavor. Grows from 16 to 20 inches in height. An extremely early type, maturing only a week later than the Alasks, when sown at the same time. A splendid all around early variety. On account of its immense productivity, evenness of maturity, compact well filled pods and excellent color and flavor, it is especially desirable for canning purposes. We found many plants in our fields last season bearing 15 to 20 pods, with a total of 100 to 150 peas fully formed, lush Peas to the plant, proving the immense productivity of this variety. Pkt., 15c; ¼ lb., 15c; ½ lb., 50c; 1 lb., $1.25; 10 lbs., $8.00; 25 lbs., $25.00; 50 lbs., $45.00; 100 lbs., $85.00.

One Pound Each, Six Varieties of Merit. ....................... $1.25, by express or freight at purchaser's expense; if wanted by parcel post add postage for 7 lb. package, at rate on page one.
PEAS
EXTRA EARLY ROUND SEEDED VARIETIES.

These sorts are most largely grown by gardeners for the early market. They ripen more uniformly than any other Peas and where the stocks have been properly leved and kept ropped from 73 to 80 per cent of the pods can be stripped from the vine at the first packing, enabling the grower to secure the highest prices. Round seeded varieties are not as sweet as the wrinkled sorts. Round seeded or smooth Peas weigh 60 lbs. per bushel. See page 9 regarding prices on Peas.

1280. Northrup, King & Co.'s Summit. Extra Early. (Sold only in sealed packages.) Height 2½ to 3 feet. Seeds white. The "Summit" holds the record as the earliest and most even in maturing the white seeded varieties, with gardeners for early market. The entire profit on the market is given to the grower on being able to market Peas early before the later and later varieties are ready. Pkt., 5¢; 1/2 lb., 10c; lb., 20c; 5 lbs., 85¢; 10 lbs., $1.00; 25 lbs., $2.75; 50 lbs., $5.25; 100 lbs., $10.00.

1285. Alaska. Height 2½ feet. Very early and exceedingly productive bearing four to seven pods which are filled with medium sized, bright bluish-green Peas of good flavor. Pkt., 5¢; 1/2 lb., 10c; lb., 20c; 5 lbs., 85¢; 10 lbs., $1.00; 25 lbs., $2.75; 50 lbs., $5.25; 100 lbs., $10.00.

1290. First and Best. Height 2½ to 3 feet. Standard white and the most sweet and seedless early. Peas are vigorous and hardy, bearing from three to seven pods, each containing from five to seven medium sized Peas of good quality. Pkt., 5¢; 1/2 lb., 10c; lb., 20c; 5 lbs., 85¢; 10 lbs., $1.35; 15c; 5 lbs., 70c; 10 lbs., $2.00; 25 lbs., $4.75; 100 lbs., $9.00.

EXTRA EARLY DWARF WRINKLED VARIETIES.

These require no brushing and are in large demand for family use. All of the following sorts are early, being but a few days later than the Round Seeded Sorts. Wrinkled Peas weigh 66 lbs. per bushel, according to the Minnesota State Law.

1330. American Wonder. Height 10 inches. This variety heads the list of Peas in flavor and quality. It is a cross between the well known Champion of England and the Little Gem and has the merits of both, together with features not found in either of the parent varieties. The Peas have a great abundance of good sized pods containing five to eight large, exceedingly sweet, tender and well flavored Peas. The Peas of this sort are the finest of the dwarf, wrinkled varieties, being nearly as early as the smooth sorts. The seed is medium sized, wrinkled, and pale green. These Peas are especially adapted to family use as they require no brush or other support. Pkt., 5¢; 1/2 lb., 85¢; lb., $1.00; 10 lbs., $5.50; 25 lbs., $13.00; 50 lbs., $26.00; 100 lbs., $52.00.

1335. Little Gem. Height 10 to 18 inches. The vines are of dwarf growth and produce an abundance of round, well filled pods 2½ to 3 inches long, only three days after the American Wonder. The Peas are green, wrinkled, of sweet, delicious flavor and excellent quality. One of the best for family use. It remains in the vines longer than the American Wonder and Nott's Excelsior, and thought by many to be sweeter. Pkt., 5¢; 1/2 lb., 15c; lb., 35¢; 5 lbs., $1.00; 10 lbs., $1.50; 25 lbs., $3.25; 50 lbs., $6.25; 100 lbs., $12.00.

1338. Little Marvel. See page 52 for description and prices.

1340. Nott's Excelsior. Height 14 inches. This sort resembles the American Wonder but grows at a little taller and the pods are somewhat larger. It is of compact dwarf growth and is nearly as early as the American Wonder. The pods average three inches in length and are well filled to the squared ends with green, wrinkled Peas of fine quality and sweet flavor. Pkt., 5¢; 1/2 lb., 25¢; lb., 50¢; 5 lbs., $1.00; 10 lbs., $1.80; 25 lbs., $3.25; 50 lbs., $6.25; 100 lbs., $12.00.

EARLY WRINKLED VARIETIES.

Most of the following sorts are nearly or quite as early as the round seeded extra earlies, but they do not mature so uniformly. This, while making them less desirable for early market purposes, makes them better for family use as they will stand longer in the freezing weather without the weight of the snow injuring them. They are much sweeter than the round seeded sorts. Wrinkled Peas are sold at 25¢ per bushel, combining our Minnesota State Law.

1390. Advancer. Height 2 to 2½ ft. Seeds green, wrinkled. This variety is a great favorite in eastern markets on account of its superior flavor, the white seeded varieties and long and well filled to the ends. This sort is extensively used by canned on account of its quality and the latest and most uniform in ripening. It is our very favorite for home use where it will ripen 75 to 80 per cent of the pods. Pkt., 5¢; 1/2 lb., 10c; lb., 20c; 5 lbs., 85¢; 10 lbs., $1.00; 25 lbs., $3.00; 50 lbs., $7.75; 100 lbs., $11.00.

1370. Carter's Daisy. (Early Dwarf Telephone.) Dwarf, large seeded, needs no brush. The striking features of the Daisy Pea is its large pods and the way in which they are heaped up in ridges on the short, strong vines. The pods are nearly double the size of American Wonder or Little Gem, and are always well filled with large Peas of most excellent quality. The vines are 16 to 18 inches high and, being strong and thickly, require no support, making it an ideal variety for use where brushes or stakes are not available. This Pea is desirable on account of the fine appearance of the pods, and always finds a ready sale. Pkt., 5¢; 1/2 lb., 10c; lb., 25¢; 5 lbs., $1.15; 10 lbs., $2.00; 25 lbs., $3.25; 50 lbs., $7.25; 100 lbs., $14.00.

1392. Dainty. A few years ago we tried out a small quantity of this new variety. It was so satisfactory that we secured some of the seed from which we produced our stock. We grew this splendid sort on our trial grounds several years and found it a superb variety not only for home use, but exceeded for canning purposes. The vines grow two to two and a half feet high; pods are borne in pairs in great abundance; the Pea grow eight to ten in a pod and are very sweet and delicious. Pkt., 5¢; 1/2 lb., 10c; lb., 25¢; 5 lbs., $1.15; 10 lbs., $2.00; 25 lbs., $3.25; 50 lbs., $7.25; 100 lbs., $14.00.
Northrup, King & Co., Seedsmen, Minneapolis, Minn.

PEAS

EARLY WRINKLED VARIETIES.

1303. Delicatesse. This Pea has gained great renown among connoisseurs, who consider it a great delicacy. It is fairly early, vines grow 18 to 24 inches long, pods are long, curved and hunched in pairs. Pkt. $0.15 lb.; $1.15; 1 lb.; $2.25; 5 lbs.; $11.75; 10 lbs.; $23.50; 25 lbs.; $58.75; 50 lbs.; $7.25; 100 lbs.; $14.00.

1304. Dwarf Defiance, and prices. See page 52 for description and prices.

1305. Gradus. The earliest wrinkled variety. This grand, large seeded, early, prolific variety has wowed the hearts of market gardeners everywhere. The vines are very vigorous and robust, growing to a height of about 6 feet. It is not only an abundant producer, but becomes attractive throughout the season. It is exceedingly early for a wrinkled variety, being only a day or two later than the earliest, small, smooth Pea. The pods are very large and are invariably well filled with from six to nine tender, luscious, tender, wrinkled Peas of large size and delicious flavor. The Peas remain on the vine even after the first frosts, and may even be harvested with a few frost-bitten pods remaining. Pkt. $0.15 lb.; $1.15; 1 lb.; $2.25; 5 lbs.; $11.75; 10 lbs.; $23.50; 25 lbs.; $58.75; 50 lbs.; $7.25; 100 lbs.; $14.00.

1310. Honey Sweets. The strong, stiff vines grow from a sturdy root system, needing no support or other support. The pods are similar in shape to the American Wonder but are broader and longer and are borne in greater abundance. The vines are loaded with Peas and should be well watered. Pkt. $0.15 lb.; $1.15; 1 lb.; $2.25; 5 lbs.; $11.75; 10 lbs.; $23.50; 25 lbs.; $58.75; 50 lbs.; $7.25; 100 lbs.; $14.00.

1315. Horsford’s Market Garden variety. Height 2 1/2 ft. See page 52 for description and prices.

1317. Laxtonian. (Eclipse.) Height 11 ft. to 2 ft. The pods are large and the plants are loaded with Peas. The Peas are round, 5/16 inches long and filled with Peas. The vines attain a height from three to three and one-half feet. It is of harder constitution than the Gradus, and is esteemed a superior variety in flavor. Pkt. $0.15 lb.; $1.15; 1 lb.; $2.25; 5 lbs.; $11.75; 10 lbs.; $23.50; 25 lbs.; $58.75; 50 lbs.; $7.25; 100 lbs.; $14.00.

1325. Thomas Laxton. Large pods, extra early Pea. This fine early Pea was raised by crossing Gradus with the Alaskan. In earliness the Thomas Laxton is only two or three days behind the Alaskan, but the pods are much larger, containing on the average seven or eight large, sweet, wrinkled Peas of the very richest flavor. The vines attain a height of from three to three and one-half feet. It is of harder constitution than the Gradus, and is esteemed a superior variety in flavor. Pkt. $0.15 lb.; $1.15; 1 lb.; $2.25; 5 lbs.; $11.75; 10 lbs.; $23.50; 25 lbs.; $58.75; 50 lbs.; $7.25; 100 lbs.; $14.00.

MAIN CROP VARIETIES.

1370. Everbearing Peas of very late season, bearing in the fall. It is the best late variety to be raised for stock. The Peas are of a rich color, average three inches in length. The Peas are very large, green, wrinkled and of excellent quality. They cook very quickly, are tender and of superior flavor. Excellent for family use. Pkt. $0.15 lb.; $1.15; 1 lb.; $2.25; 5 lbs.; $11.75; 10 lbs.; $23.50; 25 lbs.; $58.75; 50 lbs.; $7.25; 100 lbs.; $14.00.

1372. Gladstone. Of strong and robust growth. Plants remain healthy for a long time during drought. The Peas are large, very large, well filled pods containing large, dark green, wrinkled Peas of rich, sweet flavor. Our stock is very fine and of first-class quality. Pkt. $0.15 lb.; $1.15; 1 lb.; $2.25; 5 lbs.; $11.75; 10 lbs.; $23.50; 25 lbs.; $58.75; 50 lbs.; $7.25; 100 lbs.; $14.00.

1375. Potlatch. See page 52 for description and prices.

1376. Stratagem. Height 20 inches. The foliage is large and the vines strong and robust, requiring no support. They are very prolific and bear many very large, well filled pods containing large, dark green, wrinkled Peas of rich, sweet flavor. Our stock is very fine and of first-class quality. Pkt. $0.15 lb.; $1.15; 1 lb.; $2.25; 5 lbs.; $11.75; 10 lbs.; $23.50; 25 lbs.; $58.75; 50 lbs.; $7.25; 100 lbs.; $14.00.

Please note that at these prices on Peas, pkts. and quarter lbs. are prepaid but all larger quantities are sent at purchaser’s expense. If wanted by parcel post add postage at rates on page one.

The varieties of Peas we offer are those which have been demonstrated by actual trials on our grounds to be adapted to growing in the North. In addition to our own special Peas we annually inspect many varieties from all sections of the world, to discover if possible, new strains or varieties worthy of introduction. We carefully test every lot of Peas for germination before we leave our hands. Peas of low vitality are never permitted to go out of our house.

PEAS

MAIN-CROP VARIETIES.

1260. Teddy Roosevelt.

A Giant Potted Main Crop Pea.

The largest "podder," surest "cropper" and heaviest "yielder" of all the main crop sorts. The Telephone and Stratagem were the first large-podded Peas to be introduced. Naturally they created a sensation because they were advertised widely, and are at present the most largely used in America of any of the large-podded varieties. They have, however, one serious defect; the pods contain very few Peas.

This fault has been remedied in some of the later introductions, and notably so in the Teddy Roosevelt. This grand Pea resembles the Telephone in color of pod and foliage, and in habit of growth, but the pods are larger and contain more Peas. A bushel of pods will yield about four times as many Peas as the Telephone. The vines are enormously productive, being completely covered with immense long pods, well filled with from 5 to 9 large Peas of the richest flavor. This variety grows from 4 to 5 feet high, and, as an abundant cropper, is superior to all other sorts.

Nothing in the long line of Peas excels the Teddy Roosevelt in richness, sweetness and flavor, and it ought not take a gardener long to figure out that a bushel of pods that will give as many Peas as two bushels of other varieties is the kind to grow. The demand is so great every year for Teddy Roosevelt Peas that our stock is usually exhausted early in the season. Pkt. 5c; 1/2 lb., 15c; lb., 25c; 5 lbs., $1.00; 10 lbs., $1.80; 25 lbs., $3.25; 50 lbs., $6.25; 100 lbs., $12.00.

1385. Telephone. This is now the leading Pea with market gardeners, as it is in all particulars a market garden variety. It comes into bearing early, yields abundant crops of large, fine appearing pods and Peas are sweet and luscious. This variety meets with the ready approval of buyers, when placed on sale and is therefore a popular sort with Pea growers. It is a great cropper, continues long in bearing, and fills the basket quickly. The vines grow about 3 1/2 to 4 feet in height, are very vigorous and strong and have large, coarse, light colored leaves. Each vine bears on an average seven to ten pods, which are ready for picking in about 65 days. The immense pods are straight, and of fine appearance, and contain eight to nine large, unshelled, unbroken Peas, closely packed, tender, sweet and of exquisite flavor. The seed we offer has been carefully selected and is very prolific and will please all who grow this variety this season. Pkt., 5c; 1/2 lb., 15c; lb., 25c; 5 lbs., $1.00; 10 lbs., $1.80; 25 lbs., $3.25; 50 lbs., $6.25; 100 lbs., $12.00.

1390. White Marrowfat. Height 3 1/2 feet. Grown on account of the great quantities of pods which it bears and for canning purposes. The vines are of strong, sturdy growth but mature the pods quite late. The large, cylindrical, light colored pods are well filled with round, smooth, light yellow Peas of somewhat dry and mealy quality. Pkt., 5c; 1/2 lb., 10c; lb., 20c; 5 lbs., 55c; 10 lbs., $1.60; 25 lbs., $2.50; 50 lbs., $5.25; 100 lbs., $10.00.

Giant Potted Pea, "Teddy Roosevelt."

1395. Yorkshire Hero. (Big Gem.) Height, 2 1/2 feet. The stout, close potted vines are very productive, being thickly hung with round, medium sized, well filled pods about 3 inches long. The large yellowish-green Peas are wrinkled and remain so for much longer than most sorts. They are sweet and tender and never become so hard as some varieties. The quality is very fine and for those who want a rich marrow-like Pea this variety is unequalled. Pkt., 5c; 1/2 lb., 10c; lb., 25c; 5 lbs., 55c; 10 lbs., $1.60; 25 lbs., $3.25; 50 lbs., $6.50; 100 lbs., $12.00.

1400. Dwarf Gray Sugar. This is an edible podded variety. Vines grow only 15 to 18 inches in height, with purplish blossoms. Sugar Peas are not shelled, but pods are cooked as string beans. Pkt., 5c; 1/2 lb., 15c; lb., 25c; 5 lbs., $1.00; 10 lbs., $1.80; 25 lbs., $3.25; 50 lbs., $6.50; 100 lbs., $12.00.

1402. Mammoth Melting Sugar. This is another of the edible podded varieties. The pods are picked when the Peas are only half developed and at that stage there is no stringiness, but are sweet, brittle and appetizing. This variety is quite late, growing about 4 to 5 feet high and bearing large pods 4 to 6 inches long, often curved or twisted. Sugar Peas are usually very scarce, but we have a limited stock of fine quality to offer this year. Pkt., 5c; 1/2 lb., 15c; lb., 25c; 5 lbs., $1.45; 10 lbs., $2.00; 25 lbs., $3.75; 50 lbs., $7.25; 100 lbs., $14.00.

Please refer to page one for postage rates on Peas.

Telephone Peas.
PEPPER

Culture. Plant seed 1/2 inch deep in the hot-bed in March, or in boxes in the house, set in rows about 1 1/2 feet apart each way in the garden about corn plant size, at time. One oz. of seed will produce 1,500 plants.

1188. Chinese Giant, the size of Ruby Klitz, averaging 12 to 15 inches in circumference. Notwithstanding its large size, it is very early and very prolific. Plants are healthy, well branched, about two feet high and carry an enormous load of fruit, often having the appearance of being lopped together. Flesh is thick, tender, mild and sweet, and is excellent for salted or stuffed as mangoes. They can be eaten and eaten like tomatoes. When ripe the Peppers are a rich, glossy scarlet, making them of unusually fine appearance. Pkt., 10c; oz., 50c; 1/4 lb., $1.75.

1189. Golden Dawn. Similar to the Large Bell or Bull Nose, excepting that it is of golden yellow color, and of very sweet and delicate flavor. Pkt., 5c; oz., 35c; 1/4 lb., $1.00; lb., $3.25.

1190. Large Bell or Bull Nose. A large, early, bright red variety. Desirable for pickling and mangoes when green. Pkt., 5c; oz., 30c; 1/4 lb., 90c; lb., $3.00.

1200. Long Red Cayenne. A late variety. Pods are small, bright scarlet, cone shaped and pungent. Are as much used for pickling when green as when ripe. Pkt., 5c; oz., 30c; 1/2 lb., 90c; lb., $3.00.

1202. Neapolitan. A standard market sort on account of its earliness and productivity. It is 2 weeks ahead of Bull Nose. The large fruits are light green with thick, mild flesh. As they ripen they turn red. Pkt., 5c; oz., 30c; 1/4 lb., 90c; lb., $3.00.

1205. Red Cherry. Fruit cherry shaped, small, round, bright red, large and pungent. Plants are very productive. Generally used for making Pepper sauce. Pkt., 5c; oz., 30c; 1/4 lb., 90c; lb., $3.00.

1210. Red Chili. Fruit is small, bright red, very hot and pungent. Plants are very productive. Generally used for making Pepper sauce. Pkt., 5c; oz., 30c; 1/4 lb., 90c; lb., $3.00.

1225. Ruby King. Fruit is round, 8 inches long by 4 to 4 1/2 inches in diameter. Flesh is thickly cut out, very rich, sweet and mild. It is often used as a salad. Splendid for stuffing and mangoes. Pkt., 5c; oz., 30c; 1/4 lb., $1.00; lb., $3.25.

1230. Sweet Mountain. Similar to Bull Nose, though usually larger in size and longer of very mild flavor. Used much for mangoes. Pkt., 5c; oz., 30c; 1/4 lb., 90c; lb., $2.75.

1232. Sweet Upright. Fruits are borne—stalky erect. The color when ripe is yellow, sometimes red. In the tender skin and thick sweet flesh. Pkt., 10c; oz., 30c; 1/4 lb., 90c; lb., $3.00.

PUMPKIN

1235. Northrup, King & Co.'s Mammoth Prize. (Sold only in sealed packages) The largest pumpkin grown. Has weighed as high as 225 pounds. A prize winner. The flesh is fine grained and of a bright golden yellow color. Notwithstanding its large size it is a fine variety for pies and is a splendid keeper. Pkt., 5c; oz., 30c; 1/4 lb., 90c; lb., $1.75.

1240. Connecticut Field. An immensely productive, large, orange-colored field Pumpkin, usually grown for stock feeding, but it also makes good pies. Pkt., 5c; oz., 10c; 1/4 lb., 25c; lb., 50c.

1255. Large Cheese or Kentucky Field. A large, flattened, hardy and productive. About two feet in diameter. A fine keeper. Thick flesh of extra fine quality. A fine sort for family and market use. It is also grown quite extensively for stock feeding. Pkt., 5c; oz., 10c; 1/4 lb., 25c; lb., 50c.

1265. Winter Luxury. A splendid pie Pumpkin, small, round, about ten inches in diameter, skin finely netted and beautiful golden russet. The flesh is thick, sweet, tender, of fine flavor, and deep golden in color. The vines are healthy and productive and the Pumpkins keep well during the Winter. Pkt., 5c; oz., 15c; 1/4 lb., 40c; lb., $1.25.

Chinese Giant Pepper.

Have used your seeds for five years with unvarying success. The Mammoth Prize Pumpkins grow to enormous size—the envy of all beholders.

(MRS.) J. W. HASTIE,
Mt. Vernon, Wash.
The seed Potatoes we send out are seed Potatoes in every sense that the word seed should imply. They are not only the best we can supply, but we try to have them the best to be had from any source at any price. To that end they will be hand sorted, selected stock such as anyone will be proud to plant.

**New (?) Varieties.** There is nothing sold from seed catalogues in which so much humbuggery is exercised as in the item of seed Potatoes. During the past few years hundreds of alleged new varieties have been introduced and sold at high prices, and yet (stop and think of it) there are not to exceed ten or twelve standard and well known sorts on the market today.

The trouble lies in the abnormal appetite for new Potatoes. No bait is more tempting than a new variety; and just so long as this appetite exists it will be administered to. Our list contains no variety that has not made a place for itself.

**Our Potatoes Are Grown in the Far North.**

Our stock is grown largely in the Red River Valley of North Dakota. "Red River" stock always commands a premium over Potatoes produced elsewhere. No seed Potatoes can be compared with those produced in the North, either for vigor and freedom from disease, or for producing and long keeping qualities.

**Many Carloads of Potatoes are Handled by us Every Season.**

Our seed stock is carefully selected for an oval shape and medium size; tubers somewhat flattened and a triffe tapering, with stem end slightly hollowed. They will all be hand graded and screened before shipping.

Our seed is clean and healthy and in order that the product may be equally wholesome, we urge customers to treat the seed they plant with Formaldehyde, as the soil may be infected. For price, see page 127.

**Our Methods of Shipment.** We will ship our Potatoes in any way our customers desire, in bags, baskets or barrels. Prices named on this and following pages are based on the use of bags. If desired in barrels, add 10c a barrel to cover the extra cost; if in baskets, add 15c a bushel. As we sell 60 lbs. of potatoes to the bushel, which is the standard weight, it is necessary to use a larger basket than one of those in our price list. This fact should be noted in comparing quotations which are frequently made per measured bushel, which is several pounds less. We recommend shipping in tight covered baskets, there being many advantages to this method: 1st., purchaser does not have to pay freight on 20 to 30 lbs. of barrel; 2nd., when shipped in barrels, potatoes are often badly skinned, which does not occur when baskets are used; 3rd., when shipped in baskets, they often arrive in damaged condition with the bars torn and part of the contents gone; 4th., baskets are very easily handled; 5th., railway companies use more care in transporting baskets; 6th., baskets are always of use. Less than bushel lots are usually shipped in bags.

**Prices.** Owing to the fluctuating market and the impossibility of accurately estimating future values at the time of going to press with this catalogue, all prices are subject strictly to market changes. At the time of mailing we enclose a Red Figure Price List which will give latest values. A List which do not care to order seed Potatoes until later should send for Red Figure Price List just before ordering. These lists are issued at frequent intervals during the season. We believe it would be wise to order early, not only to secure the advantage of the early price, but to avoid also the possibility of varieties becoming sold out later. Varieties becoming sold out later.

**Date of Shipment.** Potatoes will be shipped at any date in orders, but where special instructions are given to the contrary, we will hold same until in our judgment there will be no danger from freezing.

**Northrup, King & Co.'s Extra Early Ohio Potatoes.**

We consider these to be the earliest, purest and altogether the handsomest stock of Early Ohio Potatoes that the season affords. On these points we challenge competition with stock from any other source. Many carloads are shipped annually from the Red River Valley to Texas, Illinois, Iowa and other central and southern states. Experienced growers have learned that it pays well to procure this stock. They are selected with the utmost care and the result is such as to delight everyone who knows and appreciates a good Potato.

The Early Ohio Potato is so well and generally known as to require no extended description. We believe it to be more popular than any other variety, which fact is evidenced by the very large demand we have for it. Our sales on this sort are many cars in excess of the amount sold of any other sort. We believe our Early Ohio can be depended upon to give a uniformly good yield under almost all conditions and alike produce a tuber of an ideal size for early market use.

Notwithstanding its earliness, this Potato keeps well. Our stock in the spring is as sound as a dollar. The basket of Extra Early Ohio Potatoes in the illustration represents the ideal type, smooth, uniform and of fine, typical shape. This Potato is characterised by a pink skin, shallow eyes, blunt ends and a slightly polished appearance, peculiar to this variety. In anticipation of the usual heavy demand for this variety, we have now in stock a choice and liberal stock of these excellent Potatoes.

**Price.** Based on placing Potatoes in bags, we quote, subject to market changes: 1 bu., 50c; 1½ bu., 65c; 2 bu., $1.50; 5 bu., $1.75 per bu. 100 eyes, by mail prepaid, $1.00. If desired in barrels, add 10c a barrel to cover extra cost; in baskets, add 15c a bushel.

The potato market fluctuates; ask for prices when ready to buy.
SEED POTATOES

Rose. This variety has been a great favorite for many years on all markets and many growers still claim that it has never been excelled in quality and productiveness. Potatoes are long in shape, good size and light pink in color at the bud end. They cook mealy and are of the finest flavor. 1/4 bu., 45c; 1/2 bu., 80c; bu., $1.40, 10 bu. @ $1.20 per bu. 100 eyes by mail $1.00, postpaid.

Booklet on Potato Culture. Valuable for every Potato grower. Sent free with orders if requested or mailed for 5c in stamps.

Early Triumph. (BLISS.) This variety was introduced many years ago by Mr. B. K. Bliss. The Triumph attained at that time no particular favor, but all of a sudden its virtues became appreciated and the demand for it was so great that it sold readily in carload lots for three times the price of ordinary seed Potatoes. There is good reason why the Triumph should be popular. It is from seven to ten days earlier than the Ohio, and that often means a difference of many dollars in the crop. This variety has long supplied the bulk of new Potatoes for the spring market throughout most of the United States. Its reddish skin shows bruises but little so it can be shipped before it is fully ripe. The Potato is medium to small, square at the ends. Skin is red, flesh is very white and firm. It is productive and for several years to come will probably command a higher price among Potato buyers than any other sort. Crop very short this season as a great many acres were flooded out. 1/4 bu., 40c; 1/2 bu., $1.00; bu., $1.75; 10 bu. @ $1.25 per bu. 100 eyes by mail $1.00, postpaid.

Carman. The Best Main Crop Potato.

The Carman is already rivaling in popularity the Burbank and undoubtedly a much better Potato. Without any exception whatever it is the greatest yielding Potato ever introduced. The tubers are borne very close to the plant, a single turn of the fork turning out every Potato. It is of a large size and of the shapeliest form. Eyes are few and shallow. It is a perfect keeper, and is not surpassed as a table variety. Skin and flesh of extreme whiteness. It rarely has a hollow heart or dark places. We recommend this Potato to our customers as being undoubtedly the best of all late sorts. 1/4 bu., 40c; 1/2 bu., 75c; bu., $1.25; 10 bu. @ $1.00 per bu. 100 eyes by mail, post-paid, $1.00.

Rural New Yorker. Originated by the late Elbert C. Carman, and a very distinct and valuable main crop sort. The tubers attain a large size and are of round oval shape. The eyes are few, distinct and shallow. It is a very healthy and vigorous variety. 1/4 bu., 40c; 1/2 bu., 75c; bu., $1.25; 10 bu. @ $1.00 per bu. 100 eyes by mail, postpaid, $1.00.

Pingree. This is a main crop Potato, named for the late Governor Pingree of Michigan—and pronounced by him the best Potato he had ever eaten. It is productive to an extraordinary degree. The Potato itself is of the size and shape best liked in nearly all markets. In quality no Potato can surpass it; in fact, in this particular we know few sorts that equal it. Its snowy whiteness when cooked, together with its dry and floury nature, makes it a favorite. 1/4 bu., 45c; 1/2 bu., 50c; bu., $1.20; 10 bu. @ $1.25 per bu. 100 eyes by mail, postpaid, $1.00.

Burbank. A Standard Late Variety.

Continues in good demand and is more largely used than any other. It is of good size, of fine form and an excellent yielder. The flesh is white, very mealy and of fine flavor and quality. A fine Potato for baking. This variety is well adapted to heavy soils. 1/4 bu., 45c; 1/2 bu., 80c; bu., $1.40; 10 bu. @ $1.20 per bu. 100 eyes by mail, postpaid, $1.00.

How We Ship Potatoes.

We ship Potatoes in any way desired by our customers. Prices named herein are based on using bags. If desired in barrels, add 1c a bushel to cover extra cost; if in baskets, add 15c a bushel.

Potato prices are subject to market changes. Red Figure Price List giving latest values mailed upon request.
Irish Cobbler.

For years this was the leading early variety of Maine, from where it spread south and west. It is a trifle later than the Early Ohio but under some conditions will make a heavier crop. The tubers are round, somewhat flattened with rather deep eyes and are medium to large in size. The skin is smooth, finely netted, and white in color. Flesh white of fine quality and flavor. This is a very vigorous grower, far less liable to knot and crack than many varieties and is nearly immune to the internal brown spot that affects some other sorts. It is a splendid shipper. 1/4 bu., 50c; 1/2 bu., 85c; bu., $1.50; 10 bu., $1.20 per bu. 100 eyes by mail, postpaid, $1.00.

See page 7 for explanation of these brands.

Irish Cobbler Potato.

Early White Albino Potatoes.

SEED POTATOES
Early White Albino.

A Grand, Heavy Yielder of Splendid Quality.

This splendid new Potato was only recently introduced in the Northwest but is already earning a reputation for quality and heavy yields that is pushing it rapidly to the front. The Potatoes are somewhat similar to the Ohio in shape but are larger and do not run quite so even as the type has not had time to become so well fixed. They are oblong in shape and have no split stem end and rounded at the seed end; slightly flattened and thick. The tubers are very solid and extremely heavy for their bulk, weighing up to 2 1/2 lbs. each. In season they are about ten days later than the Early Ohio.

The skin is a creamy white and flesh clear white. They are exceptionally mealy and white when baked, with a delicious flavor.

Early White Albino's are a very fine variety for shipping, and storing for spring use, as their tough skin and firm flesh prevent bruising when handled, and they keep hard and sound until March. As the market for old Potatoes is very sparse, there is little chance for them to be damaged in either of these respects. New Potatoes have not been introduced in this way before. The tubers are a medium height, sturdy and upright in growth, with strong, white foliage, indicating the great vigor of the stock. The tubers set close together in the hill, so they are easily turned out by hand or digger.

It is safe and include some Albino's in your seed order, plant them early in good soil and the results at harvest time will delight you. 1/4 bu., 50c; 1/2 bu., 85c; bu., $1.50; 10 bu., $1.20 per bu. 100 eyes by mail, postpaid, $1.00.

POTATO EYES BY MAIL
The Best Way to Secure Planting Seed.

We believe that we are the originators of the system of sending Potato eyes by mail. There are many people living in cities or towns who have a small garden and would like to devote a portion of it to Potatoes, but do not feel like paying the freight or express charges on a small quantity of seed. The freight alone on a few Potatoes necessary to plant this space would amount to as much as we ask for the eyes delivered at your door.

The importance of securing Northern Grown Potatoes should be taken into careful consideration. Our stocks were all grown for seed purposes largely in the Red River Valley, supplied by one to be the ideal location for the propagation of this tuber. By careful selection we take the very best Potatoes, from which the eyes are cut. These are prepared in such a way that they will keep in good condition for a considerable length of time.

There are numerous advantages in procuring Potato eyes, which can be briefly summed up:

First—It has been conclusively proven that Potatoes cut to single eyes give the largest yield and best results generally.

Second—No freight or express charges to pay, as we pay the postage.

Third—They can be sent without danger of freezing. A customer can secure them in ample time for planting without incurring this risk.

Fourth—By our improved method of preparing the eyes for shipment, they will keep in good condition for a month or more.

Fifth—There are many who would like to try some of our varieties for the first time. By purchasing these eyes this can be done at a very slight expense.

Sixth—We guarantee safe arrival, in good condition for growing.

QUANTITY TO PLANT.

If planted in hills allow three or four eyes to each; if in rows, far enough apart to permit cultivation, drop eyes about every eight or ten inches. Cultivate the same as ordinary cut tubers. Eyes are packed in neat boxes, properly and plainly labeled (see engraving) each small box containing 25 eyes. We can furnish all of one variety or several varieties, but no less than 25 eyes of any sort will be put up.

OUR OFFER FOR $1.00.

We will send to any address, postpaid, 100 Eyes, (25 each) of the following splendid sorts: Northrup, King & Co.'s Extra Early Ohio, Burbank, Extra Early Triumph, Carman. This is the way to secure your planting stock of new varieties for less than the freight would cost on the whole Potatoes. We pay the postage.

Two Bushels from Twenty-five Eyes.

The Pinette potatoes shown in the enclosed photograph were raised from 25 eyes bought from us. The yield was two bushels from the 25 eyes.

JOHN FRIDGEN, Vining, Minn.
RADISH

The Secret of Growing Good Radishes

Northrup, King & Co.

1405. Sterling White Tip Radish.

Sold only in Sealed Packages.

After several years’ experience in growing many strains of White Tip Radish we gave this particular sort the name “Sterling,” because of its fine shape, its uniformity, its handsome appearance, its solidity, its superiority in every respect to all other strains of this type of Radish. It is very early and equally desirable for outdoor culture and forcing under glass. When placed on the table it is of particularly fine appearance. In flavor, no other radish excels it; being crisp, sweet, mild and delicate, all that may be desired in a radish.

Pkt., 5¢; oz., 10c; ¼ lb., 25c; ½ lb., 50c; lb., $1.00.

This variety has a small top and is as early as any in cultivation, making it one of the best for forcing under glass. Roots ready to pull may be had in three weeks and they remain fit for use longer than any other early variety. They are small, globular, smooth, very deep red in color; flesh white, crisp, tender and mild in flavor. May be planted very closely owing to their small tops.

Pkt., 5¢; oz., 10c; ¼ lb., 25c; ½ lb., 50c; lb., $1.00.

1418. Early Scarlet Globe.

A selected forcing strain especially adapted for greenhouse and hot-bed culture, but may be grown outdoors also with the best results. The shape is a little larger than round and the color, which is deep red after pulling, is very brilliant and attractive. Has a small top and is very early, being fit to pull as soon as Non Plus Ultra, but is much larger when matured. The flesh is white and tender and when the market demands demand a large first early radish.

Pkt., 5¢; oz., 10c; ¼ lb., 25c; ½ lb., 50c; lb., $1.00.

1420. Early Scarlet Turnip, White Tipped.

Practically the same as the Rosy Gem, except that it is not quite so early but is used mostly for outdoor culture. Pkt., 5¢; oz., 10c; ¼ lb., 25c; ½ lb., 50c.

1425. Early White Box.

Similar to the White Turnip, but attains larger size. Pkt., 5¢; oz., 10c; ¼ lb., 25c; ½ lb., 50c.

1430. Early White Turnip.

A medium sized round variety, grown very largely for summer use. Has a small top and pure white skin. The flesh is waxy, mild and crisp. While generally used for outdoor culture, this makes a good variety for forcing. It takes about 30 days to mature and remains fit for use a long time.

Pkt., 5¢; oz., 10c; ¼ lb., 25c; ½ lb., 50c; lb., $1.00.

1435. Rosy Gem.

We have a very clean and beautiful strain of this popular sort. It is extremely early, maturing in 25 days, and is largely used for growing both under glass and outdoors. It is round, bright scarlet and has a handsome white tip.

Pkt., 5¢; oz., 10c; ¼ lb., 25c; ½ lb., 50c; lb., $1.00.

1440. Ruby Pearl.

A small turnip-shaped, bright red radish with a pure white tip which includes the tap-root. This variety is more broadly shaped than the Scarlet Turnip, White Tipped and will soon rival it in popularity.

Pkt., 5¢; oz., 10c; ¼ lb., 25c; ½ lb., 50c; lb., $1.00.

1445. Sparkler.

White tipped Radishes are justly popular by reason of their attractive appearance, but the varieties already in existence are either too dull in the ground color or lack a clearly defined white tip. This quite distinct variety fills every requirement in each respect, the color being a rich carmine scarlet with a very pronounced tip of the purest white. The roots even when fully developed are solid, crisp and sweet, and remain fit for use as long as the coarser kinds. It is equally well adapted for forcing in frames or growing in the open ground, for while the leaves are small, they are sufficiently large for bunching.

Pkt., 5¢; oz., 10c; ¼ lb., 25c; ½ lb., 50c; lb., $1.00.

1450. Triumph Radish.

This is a decidedly unique novelty in Radishes. It is very early, maturing about 20 days from the time of sowing. The roots are short, which makes it valuable for growing under glass. The flesh is very crisp, solid and of mild flavor. The ground color is pure white, striped horizontally with bright scarlet.

Pkt., 5¢; oz., 10c; ¼ lb., 25c; ½ lb., 50c; 1 lb., $1.25.

1455. Yellow Ball,
or Summer. A fine summer variety, of quick growth, producing crisp, tender Radishes even in the hottest weather and for that reason is grown extensively in the North. The Globe-shaped turnips are uniformly globe-shaped and are uniformly red in color and flesh is mild in flavor.

Pkt., 5¢; oz., 10c; ¼ lb., 25c; ½ lb., 50c.

Book on Vegetable Gardening.

By E. B. Green.

A complete manual on the growing of vegetables and the arrangement of the home garden. Practical and comprehensive; 252 pages. Price, cloth cover, $1.00; paper cover, 50c, postpaid.

Book on Bean Culture. By Glenn C. Bevy. The only complete authoritative and comprehensive book on the subject. Price, 50c (postpaid, 55c).
**RADISH**

**EARLY OLIVE SHAPED RADISHES.**

1460. Early Scarlet Olive.

A very useful variety. Matures in 25 days; color, bright scarlet; flesh, crisp and tender. Best adapted for main crop. Large pkt., 5¢; oz., 10¢; ¼ lb., 25c; lb., 75c.

1462. Northrup, King & Co.'s Special French Breakfast.

(Sold only in sealed packages.) Of all the large number of different strains of Radishes grown at our trial grounds this past season, none surpassed in fine quality or appearance, this new variety. It is oblong in shape, has a bright scarlet top and pure white tip. It matures quickly and is sweet, crisp, solid and tender. When offered for sale it quickly attracts the buyer's attention. Pkt., 5¢; oz., 10¢; ¼ lb., 25c; lb., $1.00.

1465. French Breakfast, Regular Strain.

A great favorite. Beautiful, bright scarlet, with pure white tip. Oblong in shape, medium size, makes rapid growth. It is a fine table variety on account of its excellent quality and attractive appearance. Fine for open ground or forcing. Pkt., 5¢; oz., 10¢; ¼ lb., 25c; lb., 75c.

1470. White Olive Shaped.

Flesh mild and firm. Of very fine quality. Large pkt., 5¢; oz., 10¢; ¼ lb., 25c; lb., 75c.

**LONG RADISHES.**

1475. Chartier or Shepherd.

The largest and handsomest summer sort. This variety is ready for the table very early and remains hard and crisp until it reaches a diameter of about an inch and a quarter, thus furnishing good roots for a long time. The color a pure crimson, fading gradually to pure white at the tip. Is delicious in flavor, resists drought effectively. Large pkt., 5¢; oz., 10¢; ½ lb., 50c; lb., 75c.

1480. Glass or Cincinnati Market.

In appearance this Radish is entirely unique. It is very early, splendid for forcing or open ground. The tops are very small and they may stand close in the row. They grow straight and smooth, from six to seven inches long. The flesh is very tender, crisp and delicious. This is a handsome variety, bright red in color, none surpassed in fine quality and remains in good condition for several days. Pkt., 5¢; oz., 10¢; ½ lb., 50c; lb., 75c.

1482. Long Cardinal.

A very early variety, fit for use in about 25 days from sowing. It is of a bright red color with white tip. It is especially valuable because of its crisp, tender flesh and fine appearance. It is smooth and uniform and highly colored; the contrast of brightest cardinal with the white tip is both inviting and appetizing. Being early it is very profitable for marketing. Pkt., 5¢; oz., 10¢; ½ lb., 50c; lb., 75c.

1490. Long White Vienna or Lady Finger.

Pure white in color, of uniform tapering shape, very attractive in appearance, sweet, mild and delicious. Matures in 25 days. Pkt., 5¢; oz., 10¢; ¼ lb., 25c; lb., 75c.

1495. White Icicle.

The finest of the early, pure white varieties. Planted in the spring the radishes are ready for pulling in about three weeks from sowing the seed. They are long and slender and crisp, pure white, making them very attractive when on sale and on the table. It is crisp and tender both when young and until it attains larger size, thus remaining in condition for use for considerable time. Pkt., 5¢; oz., 10¢; ¼ lb., 25c; lb., 75c.

1485. Long Scarlet Short Top.

A standard popular sort. Grows to six inches in length, matures in 25 days and can be used before it is fully grown. The roots grow half out of the ground, uniform in shape, smooth and very bright red in color, remains crisp and tender until fully grown. Excellent either for the market or private garden. Pkt., 5¢; oz., 10¢; ¼ lb., 25c; lb., 75c.

1500. White Strasbourg.

A large, medium long sort, with heavy shoulders tapering gradually to base. Flesh and skin pure white. Solid, fine quality. Resists drought. Pkt., 5¢; oz., 10¢; ¼ lb., 25c; lb., 75c.

1505. Wood's Early Frame.

An improvement on Long Scarlet. Largely used for forcing and a very popular variety with those who know it. Our stock is fine. Pkt., 5¢; oz., 10¢; ¼ lb., 15c; lb., 75c.

**WINTER RADISHES.**

The merits of Winter Radishes are little appreciated, probably because they are seldom grown and few people have knowledge of their worth. These grow to a large size and keep well for winter and spring use. Sow seed in the middle of June. Include some of these in your order.

1510. California Mammoth White.

Pure white, about one foot long and two or three inches through, tapering regularly to tip. The flesh is tender and crisp, keeping well through the winter. Pkt., 5¢; oz., 10¢; ¼ lb., 25c; lb., 75c.

1515. China Rose.

Bright rose color, flesh firm and piquant, cylindrical, or largest at the bottom, tapering abruptly to a small top. One of the best for winter use. Pkt., 5¢; oz., 10¢; ¼ lb., 25c; lb., 75c.

1520. Long Black Spanish.

One of the largest, latest as well as the hardiest of Radishes. Roots of medium size, oblong, black, and flesh is of firm texture. Pkt., 5¢; oz., 10¢; ¼ lb., 25c; lb., 75c.

1525. Round Black Spanish.

Roots round, sometimes top-shaped, three or four inches in diameter; skin black; flesh white. Fine for winter use as the roots keep a long time. Pkt., 5¢; oz., 10¢; ¼ lb., 25c; lb., 75c.

Notice. All vegetable and flower seeds sent prepaid, except where noted.
**RHUBARB SEED**

Culture. Sow the seed in cold frame in the Spring and as soon as the plants are large enough transplant into rows 1 foot apart each way and cultivate. The following Spring, plant out in rows 3 feet apart each way and each Spring work into the soil a liberal supply of decomposed stable manure. Rhubarb roots are set out and cultivated as the above and this method gives edible rhubarb in a very short time.

*1538. Rhubarb Seed.* Vigorous and productive. The leaf stalks are very numerous, the longer ones being from 15 to 20 inches in length, and fully 1½ inches wide.

Pkt., 5c; oz., 15c; ½ lb., 40c; lb., $1.25.

**1540. Strawberry Rhubarb.**

A delicious variety, yielding heavy crops of light crimson stems which are a beautiful strawberry color when cooked.

Pkt., 10c; oz., 75c.

**Rhubarb Roots**

The planting of Rhubarb Roots is usually more satisfactory than to attempt to start from seed. Both time and labor are saved where the former method is followed. Roots such as we furnish should be set into well enriched soil at least five feet apart each way. The stalks should not be pulled the first season. The blossom stalks, however, should always be cut back so as not to exhaust the plant by going to seed.

**Mailing Size.** Each, 20c; doz., $2.00, postpaid.

**Extra Large.** Each, 20c; doz., $2.00; by express only at purchaser’s expense.

**SALSIFY or Vegetable Oyster.**

Culture. Soil, seedling, culture and storing same as for parsnip. One oz. of seed will sow 60 ft. of row; 10 lbs. of seed required for an acre.

*1550. Long White French.* The variety most commonly cultivated and considered the best in flavor. The roots are long, white, smooth and when properly cooked form a good substitute for onions, which they resemble very much in taste.

Pkt., 5c; oz., 15c; ½ lb., 50c; lb., $1.50.

*1555. Sandwich Island.* Grows unusually large, averaging fully double the size and weight of the roots of the old variety. Of very superior quality and delicate flavor.

Pkt., 5c; oz., 25c; ½ lb., 75c; lb., $2.50.

*1560. Wisconsin Golden.* Large, rich, tender and brittle.

Pkt., 5c; oz., 50c; ½ lb., 90c; lb., $3.00.

**SPINACH**

Culture. For early spring use, sow seed in August in very fertile soil rich in humus. Upon approach of cold weather, cover the plants with 3 inches of straw. In the Spring, when dry, remove the litter and the plants will be ready for use in a short time. Sow the seed 1 inch deep in rows 1 foot apart.

For a succession, sow again early in the Spring, and every two weeks thereafter. Keep surface soil cultivated lightly.

One oz. will sow 100 ft. of row; 10 to 12 lbs. seed required for an acre.

*1565. Bloomsdale or Savoy Leaved.* This is the earliest variety of upright growth, with narrow, pointed, crinkled leaves. It is very hardy.

Pkt., 5c; oz., 10c; ½ lb., 15c; lb., 45c. By express or freight, lb., 40c.

*1595. Round Thick Leaved.* A rapid growing variety forming an excellent growth of thick, slightly wrinkled leaves. A favorite with market gardeners.

Pkt., 5c; oz., 10c; ½ lb., 15c; lb., 45c. By express or freight, lb., 40c.

*1572. Long Season.* An excellent variety, having very dark green, tender, crumpled leaves. It will stand an exceptionally long time without running to seed, and remain in good condition. One of the very best varieties for early spring and successful summer planting.

Pkt., 5c; oz., 10c; ½ lb., 15c; lb., 45c. By express or freight, lb., 40c.

*155. Long Standing.* This excellent variety comes quickly to maturity and remains in condition for use much longer than other sorts. The leaves are smooth and very dark, rich green. In our estimation the best for the private garden, as it is one of the most popular and profitable with market gardeners.

Pkt., 5c; oz., 10c; ½ lb., 15c; lb., 45c. By express or freight, lb., 40c.

*1580. Long Standing Prickly.* A little later than the leafy sorts, but yields a large quantity of thick and finely colored leaves. It remains in condition fit for use for a long time.

Pkt., 5c; oz., 10c; ½ lb., 15c; lb., 45c. By express or freight, lb., 40c.

*1570. Munsterland Frost Resisting.* A hardy winter spinach, standing considerable frost. The hardest of all varieties. Especially adapted for planting in August and very early September.

Pkt., 5c; oz., 10c; ½ lb., 15c; lb., 45c. By express or freight, lb., 40c.

*1596. Prickly Winter.* A very hardy variety and will withstand severe weather especially well. It is a sort used largely for fall sowing.

Pkt., 5c; oz., 10c; ½ lb., 15c; lb., 45c. By express or freight, lb., 40c.

*1585. New Zealand.* The stems and leaves are soft, thick, fleshy and crystalline in appearance. When started early in the Spring, the plants will resist heat and make strong growth during the Summer.

Pkt., 5c; oz., 10c; ½ lb., 15c; lb., 45c. By express or freight, lb., 40c.

Special prices on large quantities of Spinach.
SQUASH
WINTER VARIETIES.
Culture. Plant seed in extra fertile soil in the Spring
as soon as danger of frost is past. The vining varieties
should be planted in hills 8 or 10 feet apart each way.
and the bush varieties from 4 to 5 feet. Place 10
seeds in a hill and cover with an inch of soil.
When the plants are well started thin out and cul-
tivate.
One oz. of seed required for 25 hills.
For running varieties, $1.00 to 4 lbs. seed re-
quired per acre. Bush varieties require 6
lbs. of seed per acre.
1605. Northrup, King & Co.'s
Improved Hubbard.
(Sold only in sealed packages.)
Our own strain of Hubbard
Squash is the finest grown.
The soil and climatic con-
ditions of Minnesota are bet-
ter adapted to the proper maturing
of Squash seed than any other section, and
as we have taken special care in selecting and im-
proving our strain, the result is the very highest
kind known. It matures earlier, keeps better and
commands a higher price than that grown from
other seed. The vines are strong, running, growth
and bear many large pear-shaped frust. The dark
green shell is hard and strong, covered with a warty growth.
Flesh is a bright orange-yellow, fine-grained, very dry, sweet and
rich flavored.

1500. Mammoth Chili.
Weighs 100 lbs. or more. Immensely Profitable. Very Productive.
Attains an enormous size, often reaching a weight of 75 pounds,
and not infrequently weighs 100 pounds. Despite its size, its flesh is rich and
flavored. It is especially desirable for stock feeding and exhibition
purposes. From the illustration you will note its uniformly large size. For
feeding cows it is best to cut them up, mixing with ground feed. As the
yield an acre will run from 8 to 15 tons, it will thus produce a very cheap
and nutritious feed. In feeding to swine, all that is necessary is to break
the Squashes open and they will help themselves.
Mammoth Chili Squashes carry off the prize at nearly every show where
they are exhibited. Pkt., 5c; oz., 15c; 1 lb., 50c; lb., $1.25.
1610. Boston Marrow. A large fruted, hard shelled, winter sort,
with bright orange skin and deep orange
flesh. Vine of strong, running growth and very productive; fruits oval.
Pkt., 5c; oz., 10c; 1 lb., 40c; lb., $1.25.
1615. Chicago Warted Hubbard. Is similar in size and
quality to the Hubbard.
The vines are vigorous and productive, while the large, dark olive-green
fruits are rather more heavily warty. An excellent keeper and of splendid
quality. Pkt., 5c; oz., 15c; 1 lb., 40c; lb., $1.25.
1620. Gregory's Delicious. In dryness, sweetness and rich-
ness of flavor, surpasses all other
Squashes. The shell is green in color, the flesh a rich orange. An excel-
 lent winter keeper. Pkt., 5c; oz., 15c; 1 lb., 40c; lb., $1.25.
1625. Red or “Golden” Hubbard. This is identical in
size, form and fruitfulness
with the Chicago Warted Hubbard; the chief distinction being that
the heavily warty skin is of a rich orange-yellow turning to a deep salmon-
red when ripe. It is of fine quality. Pkt., 5c; oz., 15c; 1 lb., 40c; lb., $1.25.

SUMMER VARIETIES.
1630. Delicata. May be used either as a Summer or Winter variety.
Matures about the same time as the summer vari-
eties, and is of very fine flavor. Orange-yellow, splashed and striped with
very dark green. The quality is rich and dry, wonderfully solid and heavy.
Pkt., 5c; oz., 10c; 1 lb., 30c; lb., $1.00.
The fruits are of the true crook-neck type, heavily warty, and of light golden color; about one
foot long. Pkt., 5c; oz., 15c; 1 lb., 40c; lb., $1.25.
1640. White Bush Scallop. (Patty Pan) Matures early and
will bear throughout the season if
fruits are kept gathered. Squashes are clear white and of large size. Flesh
is thick and of very fine quality. Pkt., 5c; oz., 10c; 1 lb., 30c; lb., 90c.
1645. Yellow Bush Scallop. A very early, large flat variety;
very fine flavor; very small seed cavity. Pkt., 5c; oz., 10c; 1 lb., 30c; lb., 90c.
1647. Vegetable Marrow. A very popular sort abroad and can be raised
equally well here. Is long and slim, color white, with delicious white
flesh. Pkt., 5c; oz., 10c; 1 lb., $1.00.
TOMATO

1650. Northrup, King & Co.'s Sterling.
(Sold only in sealed packages.) This is an early, large and perfectly smooth Tomato of perfect flavor, very solid, and of amazing productiveness, one plant alone having been known to produce nearly a bushel of ripe fruit. In addition to its size it continues to produce ripe fruit until frost. It is, we think, the best of all Tomatoes for family use and is unsurpassed as a money maker for the market gardener. Pkt., 10c; oz., 30c; 1/2 lb., $1.00.

1655. Northrup, King & Co.'s Peerless.
(Sold only in sealed packages.) This magnificent Tomato possesses every point sought to make the perfect Tomato, except earliness. It is of very large size, very smooth, attractive color, symmetrical form, great productiveness, remarkable firmness, wondrously solid and splendid flavor. As a keeper it is probably the best of all, rendering it irreplaceable as a shipper. The seeds are small and the plants remain with the hard core which is an objectionable feature in so many Tomatoes that are otherwise good. Pkt., 10c; oz., 20c; 1/2 lb., 60c; lb., $2.00.

1660. Acme. Early and bears fruit until cut off by frost. Fruit is purplish, always round, smooth and of good size, and is borne in clusters of four or five; free from cracks and stands shipment well. Flesh is solid and of excellent flavor. Does well both outdoors and under glass. This is a good canning variety. Pkt., 5c; oz., 15c; 1/2 lb., 75c; lb., $2.50.

1665. Beauty. (Livingston's.) One of the smoothest skinned and best of the large sorts. The vines are large, vigorous and productive. The fruit is large and uniform in size and very smooth. Skin purplish pink, flesh light pink and of excellent flavor. Pkt., 5c; oz., 25c; 1/2 lb., 75c; lb., $3.00.

1670. Crimson Cushion. A continuous and late fruiter. Of immense size, often weighing a pound, and smooth as an apple. Ripens uniformly all over. Nearly round and of very good quality, being free from acid taste; color, bright scarlet. Nearly seedless and as solid as beefsteak. A prodigious bearer. Pkt., 5c; oz., 25c; 1/2 lb., 75c; lb., $2.50.

1692. Golden Queen. A very handsome yellow Tomato of large size, solid and smooth; very productive. Pkt., 10c; oz., 30c; 1/2 lb., 90c; lb., $3.00. Perfectly globe-shaped, very early, firm fleshed, ripens evenly; rose-colored tinged with purple; very productive; an excellent keeper, flavor superb. A fine variety for greenhouse or for early outdoor growing. Pkt., 10c; oz., 30c; 1/2 lb., 90c; lb., $3.00.

1700. Livingston's Globe. By large, smooth, has few seeds. Firm fleshed, ripens evenly; rose-colored tinged with purple; very productive; an excellent keeper, flavor superb. A fine variety for greenhouse or for early outdoor growing. Pkt., 10c; oz., 30c; 1/2 lb., 90c; lb., $3.00.

1705. Perfection. (Livingston's.) One of the handsomest varieties and those who have grown the large, round, smooth, beautiful, red fruit claim it is of superior quality. Pkt., 5c; oz., 25c; 1/2 lb., 65c; lb., $2.00.

1710. Stone. This variety is very large and of a bright scarlet color; very smooth, ripening evenly to the stem without a crack, exceedingly solid; is an excellent shipper; quality the very best; fine for canning; a good keeper; without hard core; not subject to rot; its vines and foliage rank and robust. Pkt., 5c; oz., 25c; 1/2 lb., 55c; lb., $2.00.

1712. Trucker's Favorite. (Livingston's.) Large, smooth, blood-red sort; early ripens all over and through at once. Will bear shipping long distances. Very few seeds and has no hard, green core. Pkt., 5c; oz., 20c; 1/2 lb., 45c; lb., $2.25.

1715. Ponderosa. This is the largest fruited Tomato and is of a fine quality for slicing. The vines are of strong growth; fruits oblong in form, deep through, and generally ridged or ribbed; deep purple in color. They are solidly fleshly with small seed cells; fine flavor. Planted in good soil, fruits frequently attain a weight of one pound or more. Pkt., 10c; oz., 40c; 1/2 lb., $1.25; lb., $4.00.
TOMATO
Northrup, King & Co.'s

The Earliest Good Tomato. Sold only in Sealed Packages.

Our stock of this splendid Tomato has come in competition in the race for earliness with numerous other varieties sent out under strong claims, and has beaten them all, and remains today, as it was when it first offered a few years ago, the earliest of all the good varieties, very hardy and succeeding everywhere. The Imperial, Early Ruby and Earliana are excellent sorts but the Early Minnesota is superior to these in shape, line, color, size, smoothness, solidly and flavor, as well as being earlier. When we say the earliest Tomato, we of course mean the earliest good Tomato. There are several sorts a little earlier, but they are marred, ridged, small, tasteless and unworthy the name of Tomato, and unfit for use. Those wishing the earliest good Tomato must have our Early Minnesota.

1725. **Chalk’s Early Jewel.** The largest, smoothest and finest flavored, extra early bright red Tomato. About ten days later than Spark’s Earliana. It is a heavier cropper, with Tomatoes of larger size and sweeter flavor, produced throughout the season. The Tomatoes are of good size, just right for market; very solid and deep through, almost round; color bright scarlet, ripening to the stem without cracks or green core. Flesh is thick, solid, of fine flavor, with few seeds; the skin is strong enough to make it a good shipping variety. Pkt., 10c; oz., 35c; 1/2 lb., 95c; lb., $1.75.

1728. **June Pink.** One of the earliest varieties of Tomatoes and a special favorite with those who like the pink color. The fruit is borne in clusters and begins to ripen very early. The Tomatoes average three inches in diameter and are of excellent quality. They are large and beautiful in color, nearly seedless and very solid, a vigorous cropper and prodigious bearer, yielding its splendid fruit until frost. Pkt., 10c; oz., 35c; 1/2 lb., 95c; lb., $3.00.

1732. **Earliana Select.** Seed saved from crown and selected. Pkt., 25c; 1/2 oz., 75c.

1734. **Earliana Private Stock.** Quantity very limited. A superior stock saved from fine breeding plots, the result of 5 years’ selection. 1-16 oz., 75c; 1/2 oz., $1.25; 1 oz., $3.00; 1 lb., $15.00.

SMALL FRUITED TOMATOES.

1735. **Husk Tomato.** Makes Fine Preserves. Also called Strawberry and Ground Cherry, is greatly valued for use as a preserve. It also makes delicious pies either when ripe or dried with sugar. The fruits are half an inch in diameter and of very sweet and agreeable flavor. They are enclosed in a husk or calyx. We consider the Golden Husk better than the Purple Husk variety and unless otherwise directed will always send Golden Husk, on orders received for Strawberries, Ground Cherry or Husk Tomato. Pkt., 5c; oz., 10c; 1/2 lb., 90c.

1740. **Peach.** These are excellent for eating raw. The fruits resemble peach, even to the skin which is covered with a slight bloom as in peach nectaries. Pkt., 5c; oz., 10c; 1/2 lb., 90c.

1745. **Red Cherry.** Pkt., 5c; oz., 10c; 1/2 lb., 90c.

1750. **Red Pear.** Fruit pear-shaped, of bright scarlet color, rich flavor. Pkt., 5c; oz., 10c; 1/2 lb., 90c.

1755. **Yellow Cherry.** Half an inch in diameter, bears early and freely until frost. Pkt., 5c; oz., 10c; 1/2 lb., 90c.

1760. **Yellow Peach.** Similar to the Red Pear, but a handsome yellow. Pkt., 5c; oz., 10c; 1/2 lb., 90c.

1765. **Yellow Plum.** Fruits are yellow, plum-shaped, in clusters. Excellent. Pkt., 5c; oz., 10c; 1/2 lb., 90c.
**Turnips**

**White Globe Turnips.**

_Sow seed early in Spring for summer crop and early in August for fall crop. 1 oz. of seed will sow 150 ft. of row, 1 to 2 lbs. per acre._

---

**1770. Northrup, King & Co.'s Early White Model.** (Sold only in sealed packages.) Best for private gardens and home use. Very early and the most perfectly formed, round, white Turnip. It has a short top and a short tap root. Flesh, snowy white, solid and sweet. Pkt., 5c; oz., 10c; 14 lb., 25c; lb., 50c.

---

**1775. Cow Horn.** Pure white, except a little shade of green at the top. Carrot shaped, grows nearly half out of the ground and slightly crooked. Delicate and well flavored; a rapid grower and good for market use. Pkt., 5c; oz., 10c; 14 lb., 25c; lb., 50c.

---

**1780. Early White Flat Dutch.** A very popular sort for table or market. Grows quickly, comes early; clear white skin, flesh juicy, mild flavor and excellent quality; bulbs free from small roots. Pkt., 5c; oz., 10c; 14 lb., 25c; lb., 50c.

---

**1785. Extra Early Purple Top Milan.** The White Milan, except that the roots are a little more flat; and the upper portion is a beautiful purple-red. Pkt., 5c; oz., 10c; 14 lb., 25c; lb., $1.25.

---

**1790. Extra Early White Milan.** The earliest Turnip. Tops very small, distinctly strap-leaved and growing very erect and compact. Bulbs form earliest of any sort. The clean white roots are smooth, flat, symmetrical and handsome in appearance. The flesh is white, tender and sweet. Pkt., 5c; oz., 10c; 14 lb., 25c; lb., $1.25.

---

**Purple Top White Globe Turnips.**

One of the most delicious and sweetest yellow-doshed Turnips. Not of large size, but firm, hard and excellent flavor. Keeps well and is superior as a table variety. Pkt., 5c; oz., 10c; 14 lb., 25c; lb., 50c.

---

**1800. Purple Top, Strap-Leaved.** The most popular sort. A general favorite with all, and more largely grown than any other Turnip. Will do well to sow either broadcast or in drills, and will form good sized bulbs in seven or eight weeks. Rather flat and of medium size. Color, purple. Pkt., 5c; oz., 10c; 14 lb., 25c; lb., 50c.

---

**1815. White Globe.** Smooth; leaves, large and dark green. Flesh is white and of good quality. Pkt., 5c; oz., 10c; 14 lb., 25c; lb., 50c.

---

**1816. Amber Globe Green Top.** A large, round variety with solid yellow flesh. Fine for stock feeding and a good keeper. Excellent for table use, both; very sweet. Pkt., 5c; oz., 10c; 14 lb., 25c; lb., 50c.

---

**1817. Purple Top Yellow Aberdeen.** Of medium size. Grows with yellow flesh of fine quality; matures late so should be sown early; keeps well and is a good variety for stock. Pkt., 5c; oz., 10c; 14 lb., 25c; lb., 50c.

---

**Herbs**

Utilize the corners for a few Pot and Sweet Herbs (for flavoring meats, soups, etc.) indispensable to every garden, while Medicinal Herbs will be found useful. Thrive nicely along sunny side of fence in a deep, rich soil.

**Culture.** These thrive best in a rich, mellow soil. Sow the seed early in Spring in shallow drills, one ft. apart, when up two or three inches thin out or transplant. Cut on a dry day before coming into full blossom, tie in bunches and hang up where they can dry quickly.

---

**1818. Anise.** Used for cordials, garnishing and flavoring. Pkt., 5c; oz., 20c.

---

**1820. Balm.** Leaves used for making pleasant beverages. Pkt., 5c; oz., 25c.

---

**1825. Basil.** Sweet. Leaves are used in soups, etc. Pkt., 5c; oz., 25c.

---

**1830. Borage.** Leaves used for flavoring and flowers furnish bee pasturage. Most easily grown in any waste place. Pkt., 5c; oz., 15c.

---

**1835. Caraway.** Grown for seeds, used for flavoring. Pkt., 5c; oz., 15c.

---

**1840. Carrot.** Or Catmint. Leaves and young shoots used for seasoning. Pkt., 5c; oz., 25c.

---

**1845. Coriander.** Seeds used in the manufacture of liquors, in confectionary and culinary preparations. Pkt., 5c; oz., 15c.

---

**1850. Dill.** Seeds have an aromatic odor and pungent taste. Pkt., 5c; oz., 15c; 14 lb., 40c; lb., $1.25.

---

**1855. Fennel, Sweet.** Ornamental; also, used in sauce. Pkt., 5c; oz., 15c.

---

**1860. Horchound.** Used for seasoning and cough remedy. Pkt., 5c; oz., 10c.

---

**1865. Lavender.** An aromatic and useful medical herb. Pkt., 5c; oz., 25c.

---

**1870. Marjoram, Sweet.** Leaves used for seasoning. Pkt., 5c; oz., 25c.

---

**1875. Mentha Crispa.** Curled Mint for flavoring. Pkt., 5c; oz., 15c.

---

**1878. Pennyroyal.** Agreable odor and flavor. Pkt., 10c; oz., 75c.

---

**1880. Rosemary.** The leaves of this plant are aromatic. Pkt., 5c; oz., 25c.

---

**1885. Sage.** An indispensable herb for seasoning. Pkt., 5c; oz., 25c.

---

**1890. Summer Savory.** Used for flavoring soups. Pkt., 5c; oz., 15c.

---

**1895. Thyme.** Leaves and young shoots used for seasoning; a tea is made of the leaves; a remedy for headache. Pkt., 10c; oz., 50c.
RUTA BAGA

Swedish Turnip.

This is one of the best and most valuable of root crops. Ruta Bagas do best on new land or light, sandy soil and are for this reason largely grown on breaking, where, without cultivation they produce bountiful crops of excellent quality. They, however, respond freely to care and to obtain the most satisfactory results, the land should be thoroughly prepared, well fertilized and made fine and mellow. A continued spring fallow will be beneficial in destroying weeds in the soil and in forming a fine, firm seed bed, which is desirable for all root crops.

Ruta Bagas are grown for two purposes, for table use and for stock feed. There is a large demand for Ruta Bagas of good quality for household use and many carloads are sold on the large city markets. The supply is frequently insufficient to meet the demand.

The value of Ruta Bagas as a stock feed is not fully appreciated in this country. In Europe and in eastern Canada, very large quantities of Ruta Bagas are produced on practically every farm. They may be very easily grown and greatly increase the value of pastures and meadows and can be used as much per bushel on the market as potatoes. At an estimation of this point we recall an instance which was brought to our attention a few years ago. Mr. Harborn, then living at St. Cloud, Minn., a well known short-horn breeder, planted 4½ acres of our Prize Winner and Monarch Ruta Bagas. He raised 200 bushels. The land was prepared, the seed sown, the field cultivated and the roots harvested, topped and finally at a cost of 47 days' labor, a net, or less than 4c per bushel. This demonstrates two important points, first the cheapness with which Ruta Bagas may be produced, and second, the importance of using high grade seed, that is to say, seed with a history of big yields behind it.

Our seed is grown for us in England by specialists, whose work has been the breeding and production of the highest type of Ruta Bagas. The aim has been to produce a root with a small uniform size and shape and with a single tap root, a root of high feeding quality, fine flavor and great marketability.

With Ruta Bagas seed which we sell it is possible to raise 15 to 20 tons of roots per acre. With ordinary seed the yield may be one-half to one-third that amount. The difference in cost per acre between using our high grade seed and the cheaper qualities obtainable on the market is so insignificant, that no wise grower can afford to consider growing anything but our seed.

When Ruta Bagas are intended for a cultivated crop, the seed should be sown in drills 15 to 24 inches apart; 5 per inch and thin out to 4 to 6 inches in rows. The yield will be greatly increased by frequent cultivation. The time of sowing will depend somewhat on locality and the purpose for which the cropland is to be used. If for market, sow the seed the latter part of June. If for stock feeding, seed may be sown as late as July 15th and it will, under favorable conditions, mature a crop before the ground freezes. Seed must be sown broadcast if desired. Use one ounce to 230 feet of drill, 1½ pounds to the acre in drills or 2½ pounds broadcast.

Order Early. It will be a great convenience both to our customers and to ourselves if orders are sent us early. There is the advantage that the air may beollipop the same day received, but during the rush season this is not always possible with the advantage of ordering early.

How to Send Money. Money can be sent safely either by No. 1, order, bank draft, express draft, express order or registered letter. If you use other amounts to $1.00 or more it is best to send by one of the above methods. Postage stamps must be exhausted as there is no return post charge. Never send coin in the mail unless in registered letter.

Northrup, King & Co.'s Prize Winner Ruta Bagas is a purple top, yellow fleshed variety. The roots reach a good size and are exceedingly uniform in appearance. The Prize Winner is an all round Ruta Bagas, suited to every purpose and every soil. We do not hesitate to say that in the Prize Winner we possess the handsomest and most productive stock of purple top Ruta Bagas known. Valuable not only for stock feeding, but for table use as well.

1900. Northrup, King & Co.'s Prize Winner

Sold only in Sealed Packages.

Short neck, small top, firm flesh, symmetrical shape, united with high feeding value, great productivity, hardness and long keeping qualities, describes the perfect Ruta Baga. Every root of Northrup, King & Co.'s Prize Winner more nearly approaches this ideal than any other strain of Ruta Baga.

VEGETABLE PLANTS AND ROOTS.

Turn to page 69 where a full line of Cabbage, Celery, Tomato and other plants are listed and priced. Horse Radish and Mint Roots are also listed on the same page. Asparagus Roots are on page 19; Rhubarb Roots, on page 62; Onion Sets, on page 50; Garlic, on page 41.
Beautiful American Asters

Cultural Note on Asters.

The cultivation of the Aster is simple. Do not sow the seed too early; the middle of March indoors is considered a very good time. Successive sowings should be made, if a constant supply of flowers is desired from July until frost. For early use sow the seed in shallow boxes, covering with one-fourth inch of soil. Later sowings may be made in hot-beds or cold frames, or in the open ground, broadcast or in drills, when all danger of frost is past. Never use the same ground or location twice in succession. The soil should be rich and moist. We recommend pulverized sheep manure, wood ashes and phosphates as fertilizers. If barnyard manure is used it should be thoroughly decomposed. Allow plants plenty of room; rows should be 3 feet apart and 15 inches between the plants in the rows, but the distance may be less according to the habit or growth of the variety.

The aster beetle or fly is one of the worst pests but there seems to be only one crop of them, and these if caught and killed are not usually followed by others. Dusting the plants with air-slacked lime or dry ashes will be found beneficial. Root lice and cut worms are also troublesome. Applications of kerosene emulsion or tobacco water around the roots are ineffective. Aster blight or "yellow" can usually be traced to the work of the above pests.

The plants should be pulled and burned if they should become badly diseased. Growers should remember that prevention is better than cure. Good cultivation and the timely use of the remedies suggested should produce healthy, vigorous plants.

2031. Lavender Gem Aster.

One of the most beautiful Asters; color a charming shade of lavender, deepening with age. The flowers are always full double, borne in profusion on stems slender, wiry stems. Of the Ostrich Feather type, large, artistic and loosely arranged. Pkt. 15c.

Queen of the Market.

The earliest first-class Asters, coming into flower almost a month in advance of later sorts. The plants are of open habit, about 15 inches high, bearing on stems 10 to 15 inches long the finely formed double flowers. This is the standard variety among florists for early cutting.

Rochester Giant Comet Asters.

This is a new class of Asters of which the plants are like those of the Late Branching, large and strong. The flowers like all the Comet type have petals that are very long, narrow and gracefully recurved, giving them a graceful appearance that makes them desirable of all Asters. The immense size of the flowers—they are the largest Asters now in cultivation—their artistic beauty, delicacy of coloring and freedom of bloom make them superior to almost all others. They bloom in mid-season.

Crego Giant Comet Asters.

This Aster resembles the Chrysanthemum very much in form. It is usually large, being 3 to 5 inches in diameter when well grown. The petals are very large, twisted and curled so as to give the blossoms a beautiful, fluffy appearance. They keep in good condition for a very long time. The plants, of luxuriant, branching growth, attain a height of 18 inches to 2 feet, each plant bearing from 20 to 30 magnificent flowers on very long stems. We offer these in 6 shades, each distinct and deserving cultivation.

BEAUTIFUL AMERICAN ASTERS

The Daybreak Asters.

These very desirable medium early Asters produce plants stiffly erect in habit of growth and which attain a height of eighteen to twenty inches. The flowers form a ball about two and one-half inches in diameter with regularly incurved petals. They are borne on long, stout stems.

2070. Northrup, King & Co.’s Fire Ball.

(Sold only in sealed packages.) The nearest approach to a pure, brilliant scarlet of any Aster yet introduced. The plants are literally covered with perfectly formed flowers of faultless Peony shape. Height, 10 to 12 inches. Ptkt, 10c.

2072. New Red Astar “Sensation.”

This is the reddest of all Red Asters, the color being a rich garnet or ox blood red which p pinch in the sunshine like a live coal. The plants are of free branching habit, about 18 inches high; the very double flowers, averaging 3½ inches across, are borne freely on stems a foot long from early in August till the close of September. The intense color shows up well when cut, and makes a brilliant bit of color in a bed or border. Pkt, 15c.

2073. New Enchanting Pink Astar.

Immensely flowers of a soft delicate pink, which does not fade, and are borne in strong, upright plants. The plants are tall and strong and the flowers are the size of the largest Branching Asters. The flowers is made up of broad petals, loosely arranged, producing an exceedingly soft and pleasing effect. Pkt, 25c.

2074. Giant Purity.

Large, double flowers of purest snowy whiteness; mid-season. Pkt, 25c.

2075. Pink Beauty.

This has been pronounced by experts to be the finest pink mid-season Aster. The bushy plants grow 24 to 30 inches high, and bear as many as 50 large chrysanthemum-like flowers of a delicate blush-pink. Pkt, 15c.

Peony Flowered Perfection Astar.

This has double large and beautiful flowers with incurved petals, resembling very much a Peony in shape. The plants are strong and upright, bearing handsome blooms on long, stiff stems. Extra fine for bouquet work. Height, 20 inches. 2080. Blue ................. pkt, 10c 2082. Crimson ................. pkt, 10c

Seemples Improved Late Branching

A grand, popular strain having all the characteristics of a good Aster.

The plants form strong, branching bushes 2 to 3 feet high, bearing on long, strong stems their handsome chrysanthemum-like flowers averaging about 3 inches across. The form of the flowers and length of stem put them in the front rank for cutting. They bloom late in the season.

The New Astemnum.

A strain of Comet Asters which on account of their immense size and Chrysanthemum-like appearance have been appropriately named Astemmums. They attracted great attention when they were first exhibited three years ago and have become increasingly popular ever since.

The plants grow about three feet high with strong stems and usually bloom a trifle earlier than the Comet Giant Comets. Few of the flowers are less than five inches in diameter.

2057. White Plicee.

A grand variety of branching growth with very large, snow-white flowers of the beautiful featherly Comet Type. Pkt, 15c.

For Astar Plants see page 100.
2105. Abutilon. Flowering Maple. These grow rapidly and make fine, large shrubs, bearing elegant bell-shaped flowers in great profusion. Pkt., 10c.

2107. Adlumia. Allegheny Vine. A graceful, hardy biennial climber, but as it flowers itself year after year, may be considered a perennial. The feathery foliage closely resembles that of the Malden Hair Fern, the flowers are tube-shaped, flesh-colored and completely cover the plant. Very desirable to cover trellises, stumps of trees, etc. Pkt., 10c.

2108. Adonis. Showy annuals of easy culture, with pretty, fine cut foliage, dark crimson flowers with light center. 1 foot. Pkt., 5c.

Alyssum. Sweet. A very pretty plant for edgings, vases, bed edges or rock work. Sweet scented and blooms profusely all summer. 2115. White. Oz. 10c; pkt., 5c.

2116. Little Gem. Very dwarf—4 inches—and spreading. They quickly become one mass of white, fragrant flowers, remaining in full bloom from Spring to Fall. Oz. 10c; 1/2 oz. 20c; Pkt., 10c.

2117. Saxatile. Has handsome masses of bright yellow flowers. This variety is a hardy perennial, but blooms the first season. Grows 12 inches high. Pkt., 10c.

2122. Sunfire. A most beautiful plant; height, two feet; the leaves are long and narrow, the upper ones of the brightest glowing crimson. Pkt., 10c.

2123. Ambrosia. A hardy annual with long spiral stems, bearing an abundance of small, round, greenish-yellow buds and blooms which are exceedingly fragrant. It is not desirable as the Rose Geranium as a plant with fragrant foliage and for making up into bouquets and other floral work. Its long, beautiful, finely smocked petals of lovely green are unsurpassed. It is one of the easiest annuals to grow and seeds may be sown early in open ground. Pkt., 5c.

It will thrive in any out-of-the-way place where scarcely anything else will grow. It resembles a large beautiful Forget-Me-Not of deep blue color. Blooms all summer. Pkt., 5c.

**Antirrhinum or Snapdragon.**

Snapdragons were a feature of the old-fashioned garden. Then for a time they were neglected, but suddenly when the improved new sorts appeared, they became one of the most fashionable and popular flowers. Today they are being raised in gardens everywhere. Since the splendid flower spikes appearing all summer, are as valuable for bedding effects as for cutting and form a pleasing contrast to some of the stiffer, coarse annuals. Pkt., 10c.

Culture. Should be sown in open ground the latter part of May. It is best to start seeds indoors in a shallow box or in a hot-bed in a temperature of about 65 degrees. Cover seeds to a depth of four times their size and press them firmly into the soil. Water with a fine spray. Transplant seedlings after second leaves form and remove to garden when weather is warm and settled.

2127. Giant White Pkt. 10c.

2128. Giant Scarlet Pkt. 10c.

2130. Giant Yellow Pkt. 10c.

2131. Giant Pink Pkt. 10c.

2132. Giant Mixed Pkt. 10c.

2133. Giant Mixed Pkt. 10c.

2134. Queen of the North. Grows 1 foot high and density covered with large white flowers. A gem for beds and borders, valuable for pot culture. Pkt. 5c.

2135. Tom Thumb Mixed. Large variety of colors; best for bedding. Pkt. 5c.

2136. Tall Mixed. Extra fine selection, best for cutting. Oz. 40c; pkt. 5c.

2140. Arctotis. Blue Eyed African Daisy. A remarkably handsome new annual. It forms a branching bush 2 to 3 feet high. Its flowers are large and showy, being pure white on the upper surface, the reverse of petals being a pale lilac blue. It is of easiest culture and flowers from early summer until late Fall. Pkt., 10c.

Culture for Arctotis. Sow in the open ground when danger from frost is past. Cover the seeds to a depth of four times their size and press them firmly into the soil. Water with fine spray.
Artemisia sacorum. Summer Fir. Ornamental foliage plant from China. Makes a handsome pot plant and may also be grown successfully in groups or borders.

Asparagus plumosus. Probably the most popular house plant today. You can grow it for yourselves and neighbors. The leaves are bright green, gracefully arching, surpassing Maidenhair Ferns in grace, delicacy of texture and richness of coloring. Pkt. 17 seeds. 25c.

Balloon Vine. Annual climber of rapid growth; foliage green, very pretty; flowers white, seed vessels look like miniature balloons. Height 8 feet; succeeds in bright soil and warm situation. Oz., 5c; pkt., 5c.

Bachelor's Button. Also known as Centaurea, Cornflower. Blue, Bottle, Ruffled, Sow, etc. These are among the most attractive of all annuals and one of the most popular of all old-fashioned flowers.

Bean, pkt. of annual, a very vigorous grower, producing its gorgeous masses of beautiful, brilliant colored double flowers in the greatest profusion; easy culture; succeeds in a good rich soil. Our strain is unrivaled for great variety and size of flowers. 2 feet.

Culture: Sow out of doors, when danger from frost is over, in the bed or border where they are to flower. The soil should be well pulverized and a depth of about four times their size is necessary. Press down firmly with a board, and thin out so that the plants will not become crowded. For early flowering they should be sown indoors in a shallow box, or in a hot-bed, and transferred to the open ground when the weather becomes suitable.

Balsam and Pear. Very curious, rapid and vigorous annual climber, producing bright red flowers, from July to September. The foliage being dense, makes it splendid for places of shelter or shade as desired. Pkt., 10c; 1 lb., 15c.

Balsam Apple and Pear. Very curious, rapid and vigorous annual, bearing masses of bright red flowers and golden-yellow fruit, which opens when ripe, showing the seed-pod and bright red interior. Apple and Pear mixed, pkt., 5c.

Bartonia aurea. Large golden blossoms, similar in shape to the Evening Primrose. Valuable for borders. One foot in height. Pkt., 5c.

Bean, Scarlet Runner. The well known rapid-growing, annual climber, producing bright red flowers, from July to September. The foliage being dense, makes it splendid for places of shelter or shade as desired. Pkt., 10c; 1 lb., 15c.

Begonias. Everblooming Bedding Varieties. The following are varieties of Begonia Semperflora, and take rank as bedding plants with Geraniums and Coleus, doing equally well in full sunlight, and are popular both in positions partially or wholly in shade. They are sturdy growers, growing about 1 foot high and forming dense bushes, which, from May until frost, are completely hidden with flowers. As pot plants for winter flowering they are superb, remaining a sheet of bloom throughout the year. Easily raised from seed. See page 106 for plants.

Begonia fimbriata. A large flowering form of the above. The flowers are very large and bright orange-carminic in color. The foliage is a beautiful deep red. Pkt., 10c.

Begonia Semperflora, Mixed. This mixture contains all the best varieties, ranging in color from pure white to the deepest crimson. Pkt., 10c.

Begonia. Tuberous-Rooted. Plants of great value for summer decoration or window gardening, blooming the first season from seed in Februrary or March, in a temperature of 60 degrees. To secure the best of results they should be planted out as soon as the ground becomes warm. They are the covered the whole Summer with bright and elegant flowers. See page 116 for bulbs.

Bidens. One of the finest additions to the list of annuals for cut flowers. The blossoms are suggestive of the Dahlia and Coreopsis with both of which this plant is allied. The flowers which are produced on long stems are large, single pink or white with yellow centers. The seeds should be started inside and planted out when danger of frost is over. They do best in a sunny location, but need cool, moist soil, so it is well to keep the ground well mulched. See illustration on page 72. Mixed, pkt., 15c.

Begonia. Bird of Paradise. Poinciana Gillesii. The golden-yellow in color, measuring 25 inches across, and are produced in very large trusses. One of the most beautiful of the flower is the large petals, which are spread out in fan-like form and are of bright crimson color. The foliage is also handsome, consisting of a bright green ruffled, one of a delicate Annica. If the seed is started early it will bloom freely the first year. Pkt., 10c.

Brachycome. Swan River Daisy. Dwarf-growing, annual, covered during the greater part of the summer with a profusion of pretty white flowers, suitable for edging. Pkt., 5c.

Browallia. A favorite profuse-blooming bedding plant, covered with beautiful flowers during the Summer and Autumn, of intense blue; grows freely in any rich soil.

C. Species Major. Large-flowering variety, brilliant ultramarine blue, a rare color. Especially valuable as a pot plant. Pkt., 10c.

Calceolaria. Large flowering plant. These gorgeous plants are widely grown for their beautiful, spectacle-like flowers, which are set off against a deep green, glossy foliage. Pkt., 5c.

Calceolaria. Large flowering plant. These gorgeous plants are widely grown for their beautiful, spectacle-like flowers, which are set off against a deep green, glossy foliage. Pkt., 5c.

2185. Meteor. Large, double yellow, striped with orange, very showy. Pkt., 5c.

2187. Prince of Orange. Reminisces Meteor but is much darker, especially fine. Pkt., 5c.

2188. All colors mixed. Pkt., 5c. For other Marigolds, see page 77.

Calliopsis or Coreopsis. Showy and beautiful free-flowering annual, blooming all summer and excellent for cutting and masses. A true wildflower for the meadow. Excellent for bedding.

2190. Coronado. Showy, large, pure yellow flowers; excellent for bedding. Pkt., 10c.

2195. Canary Bird Vine. Tecomastrum Canariense. A beautiful rapid annual climber, the charming little Canary Bird blooms bearing a fancied resemblance to a bird with its wings half expanded. Oz., 40c; pkt., 5c.

Candytuft. July until frost. Very hardy and easy to cultivate. Height, 1 foot.

2197. Giant Hyacinth Flowered. Produces very large elongated heads of pure white flowers. Oz., 75c; pkt., 10c.

Canna. Very hardy, popular, and grown in great numbers. Their long, elegant, showy flowers and tropical shape of foliage make them a favorite in beds, borders, and potting. Best varieties for bedding and cut flowers. Can be increased by division or seeds.

2199. Cardinal Climber. A graceful annual vine growing readily from seed. It is a strong and rapid climber, with beautiful fern-like, fine cut foliage and covered with a blaze of circular, cardinal-red flowers from Mid-Summer until frost. Although this vine is of recent introduction it is becoming very popular. It is a valuable addition to our annual vines and exhibits distinct, in its beauty. In the Armory Garden it has been greatly admired by all visitors. Soak seed until it swells then start indoors and transplant outside after all danger of frost is over. 25c.

Carnations. Carnations are general favorites because of their rich colors, spagy fragrance and profusion of flowers. All the following varieties do well grown in beds, but the Marguerite and Chabaud types are the best for summer flowering.

Marguerite Carnations.

2199. Salmon Yellow. Pkt., 10c.

2200. Bright Rose. Pkt., 10c.

2213. Clovers of each of the above colors Carnations. Pkt., 10c.

2214. Mixture of all colors Marguerite Carnations. Pkt., 10c; 1 oz., 25c; ½ oz., 50c; 1 oz., 80c.

Marguerite Carnations in separate colors.

2215. Mixed Colors. ½ oz., 75c; pkt., 10c.

2217. Centrosema. Butterfly Pea. A hardy vine of rare beauty, flowering in July from seed sown in April. Flowers range in color from rose-violet to a reddish-purple, with a broad feather-like marking through the center; inverted pea-shaped; borne in great profusion. Pkt., 10c.

2218. Empress. (Colossal size). They have been growing common 4 feet from tip to tip, color rich crimson. Pkt., 10c.

2219. Queen of the Dwarfs. This is the best of the dwarf growing Cockscomb. The plants grow only 1 foot and 1 inch high with beautiful dark rose-colored combs, 2 feet across. Pkt., 10c.

2220. Varieties. Varies with crimson, orange, green, striped, etc. Three feet. Pkt., 5c.

Celosia Plumosa. Feathered Cockscomb. These make fine plants for large beds or groups.

2220. Thompson’s Superb. Of pyramidal growth, attaining a height of a little more than two feet and producing graceful, feathery plumes of the most brilliant crimson. In the sunlight the rich color of the flower spikes is beautifully contrasted with the bronze-colored foliage. Pkt., 10c.

2222. White. Pkt., 10c.

Centaurea Imperialis. Sweet Sultan. This is without doubt the most beautiful of all the Centaureas. The beautiful sweet scented, artistic shaped flowers are borne on long, strong stems and when cut will stand for days in good condition. The plant itself is much stronger than any other Sweet Sultan. It is of very easy culture. One of the best annuals for cut flowers.

2224. Alba. Pure white. Large pkt., 10c.

2228. Favorite. Rosey lilac. 10c.

2230. Splendens. Purple lilac. 10c. Collection of one pkt., each of above nine’s, 40c.

2231. All Colors Mixed. Large pkt., 10c; ½ oz., 25c; oz., 50c.
2232. Centaurea Margarita. Giant White Sweet Sultan. The flowers of this greatly improved variety are much larger than the older sorts. They are pure white, deliciously scented, with long stalks, and last very well in water. Pkt., 10c.

Craspedia. Annual varieties. These are showy and effective garden varieties extensively grown for cut flowers. The foliage is ornamental and finely cut. The single varieties grow 12 to 18 inches high and produce on long stems large flowers resembling the Daisy, but of many bright colors in distinct banks or rings. See Perennial Craspedeum, page 81.

Cineraria. Magnificent and indispensible flowering plants for the conservatory or window garden. The flowers measure 2 to 3 inches across, are of white, blue, violet and crimson shades; usually two or more colors are shown in one flower. Pkt., 25c.

Cobaea Scandens. Cathedral Bells. One of the handsomest and most rapid growing of the annual climbers. Climbs thirty feet in a season. The flowers are bell-shaped, very profuse and perfectly hairy. The vine is always clean and free from insects. Pkt., 10c. Mixed, pkt., 15c.

Coccinea Indica. Scarlet-fruited ivy-leaved. An attractive annual climber of the Gourd family. The leaves are smooth, glossy and ivy-like, contrasting beautifully with the snow white, bell-shaped flowers and brilliant scarlet fruit. Pkt., 10c.

Coix Lachryma. Job’s Tears. with broad leaves and shiny, pea-like seeds, used for beads. Plant early in the spring, four or five seeds in a hill, one-half inch deep. Three feet high. Pkt., 5c.

Colchicum. The most largely used, perhaps, of all bedding plants. These are easily grown from seed. Plants on page 166.

Cosmos. Bright and attractive annuals of easy culture. The long graceful sprays are valuable for table decoration. They thrive in sun or shade, growing 2 to 2½ feet high, with masses of double flowers, which all open in white when cut. Double varieties, all colors mixed; oz., 25c; pkt., 5c.

Crocus. The flowers are borne on long stems, rising above the foliage and are very desirable for home or church decoration, lasting a week or more in water. It is a very prolific bloomer and if the plants are given enough space to develop will bear freely, every shoot being covered with a mass of lovely flowers. Cosmos is very effective among shrubbery and especially desirable for interplanting with early blooming perennials so it fills in the gaps when the latter die down. It may be transplanted any time until shortly before blooming.

Cross midway. The earliest flowering variety in cultivation, blooming fully two months in advance of any other strain known. Seeds sown in open ground, in early May, will produce blooming plants in July, and continue a mass of blossoms until killed by frosts. It is the result of painstaking selection from a few plants several years ago, which showed a decided tendency to earliness. This desirable trait is so well established that instead of a few plants found thirty yards off, and in other early varieties—our Extra Early Cosmos is uniformly so, and will bloom in any part of the North. The plants grow about four feet tall.

2262. Northrup, King & Co.’s Extra Early. All colors, mixed, pkt., 1c.

2267. Collection. Packet each of three colors, 25c.

2254. Dwarf. This variety comes into flower July 1st, growing from 4 to 5 feet high. The flowers are large, the color a beautiful white, relieved by a delicate tinge of rose at the base of the petal. Pkt., 1c.

Mammoth Cosmos. The following varieties of Cosmos usually do not start blooming until several weeks after the Extra Early sorts, consequently they are sometimes stopped by early frost. To insure success therefore, it is best to start all Mammoth varieties indoors in early April, later transplanting them to the garden when danger of frost is over. By this method they start to bloom in good season and the very large flowers will repay the extra trouble.

2255. Mammoth Crimson. Pkt., 10c. 

2257. Mammoth Pink. Pkt., 10c. 

2258. Mammoth Yellow. Pkt., 10c.

Cyclamen. Giant Flowered. Charming plants with beautiful foliage and rich colored fragrant flowers. Considered by many to be the finest Winter flowering plant we have. Seed may be sown Spring or Autumn. The culture of Cyclamen from seed is much more satisfactory than from bulbs. Mixed colors. Pkt., 25c.

2270. Cyclamen. Giant Flowered. One of the most popular vines with their delicate fern-like foliage and mass of beautiful star-shaped flowers. All colors mixed, oz., 25c; pkt., 5c.

Culture for Cyclamen. Sow in gentle heat, in shallow boxes or pots filled with a compost of sandy loam, leaf mould and coarse sand. Sow seeds on surface and cover with two inches of well rotted moss. Water carefully and keep at a uniform temperature of 50 to 60 degrees. When plants have made 2 to 3 leaves transplant into small pots. 2272. Cypress Vine. One of the most popular vines with their delicate fern-like foliage and mass of beautiful star-shaped flowers. All colors mixed, oz., 25c; pkt., 5c. *Culture for Cypress Vine. Sow two weeks before danger of frost is over, in the bed or border where they are to flower. The soil should be well pulverized and the seed covered to a depth of about four times their size. Firm well with a board, thin out the seedlings to prevent crowding.

Northrup, King & Co.’s Extra Early Cosmos.

Northrup, King & Co.’s Extra Early and Perennial Cosmos.

Cosmos is the showiest of our late Summer and Autumn blooming annuals. Its graceful flowers borne on long stems, rising above the feathery foliage are very desirable for home or church decoration, lasting a week or more in water. It is a very prolific bloomer and if the plants are given enough space to develop will bear freely, every shoot being covered with a mass of lovely flowers. Cosmos is very effective among shrubbery and especially desirable for interplanting with early blooming perennials so it fills in the gaps when the latter die down. It may be transplanted any time until shortly before blooming.

Extra Early. The earliest flowering variety in cultivation, blooming fully two months in advance of any other strain known. Seeds sown in open ground, in early May, will produce blooming plants in July, and continue a mass of blossoms until killed by frosts. It is the result of painstaking selection from a few plants several years ago, which showed a decided tendency to earliness. This desirable trait is so well established that instead of a few plants found thirty yards off, and in other early varieties—our Extra Early Cosmos is uniformly so, and will bloom in any part of the North. The plants grow about four feet tall. Water carefully and keep at a uniform temperature of 50 to 60 degrees. When plants have made 2 to 3 leaves transplant into small pots.
Dahlia. Dahlia can be grown easily from seed or as to produce flowers the first year. This is as true of double Dahlias as of single. In the Dahlias are combined more desirable qualities than are found in almost any flower grown in the open ground. It can be had in perfection from June until cut down by frost. As it can be found not only every imaginable color except blue, but the most beautiful combination of colors and marvelous blending of shades and tints imaginable. As a cut flower the Dahlia is unsurpassed, owing to its great diversity of bloom and the brilliant luster of its colors.

2275. Northrup, King & Co.'s Sterling Mixed Dahlia. (Sold only in sealed packages.) This mixture is intended to embrace seed of every desirable Dahlia, procured from the most prominent Dahlia specialists of this and other countries, and identified by us. Full directions for culture (which is of the very easiest) sent with every packet. Pkt., 15c; 3 pkts., 35c.

2276. Twentieth Century or Orchid Flowered Dahlia. In size the flowers are giants, 4½ to 5 inches across, and in color vary from almost pure white to deep crimson. These large single flowers are truly magnificent. Pkt., 15c.

For Dahlia roots see page 117.

2282. Datura, Angel's Trumpet. Showy, large, branching plants growing 5 to 6 feet high, bearing large trumpet-shaped flowers, 6 inches in length and very fragrant. Mixed seeds of all varieties, pkt., 5c.

Dianthus or Pinks. One of the most popular and magnificent flowers in cultivation, producing a great variety of brilliant colors and profusion of bloom. The annual varieties may be sown out of doors when danger from frost is past and in a few weeks time they are a mass of bloom, continuing up until frost. 1 foot. 2283. Double Annual Pinks, Mixed. A fancy mixture of beautiful varieties. Oz., 60c; pkt., 5c.

2284. Dianthus, Double Lucifer. This new annual Pink represents the double flowered form of the Dianthus Versicolor. The newly fringed double flowers, 1½ to 2 inches across, are of an intense orange-scarlet, a dazzling color in full sunshine and the most striking of all red flowered annual Pinks. The plants grow 12 to 15 inches high and may be advantageously used for effective flower beds. We are certain that the flowers of this new variety will be of the most great value and importance for cutting among the annual Pinks, as the bright scarlet flowered variety "Grenadin" has attained among Carnations. Pkt., 25c.

2285. Single Annual Pinks, Mixed. A beautiful mixture of all the single varieties. Oz., 60c; pkt., 5c.

2286. Hardy Garden Pinks, Fancy mixed. Contains all the desirable colors. ½ oz., 50c; pkt., 15c.

2290. Dimorphotheca Aurantiaca. Orange African Daisy, a truly showy annual Daisy from South Africa which thrives under our climatic conditions perfectly. The bushy plants grow 1½ to 2 feet high. The flowers, 2½ inches across, are a unique, rich, glossy orange-gold, with dark disc and these brilliant in the sunshine and present a magnificent sight. Seed may be sown in the same way as Asters. They bloom the greater part of Summer and Fall. Pkt., 15c; 5 pkts., $1.00.

Dolichos, Hyacinth Bean. A rapid growing and free flowering annual climber. The seed pods which follow the flower are very ornamental for covering arbors, trellises, etc. After danger of frost is over, sow the seeds where they are to remain. The soil should be well pulverized and the seed covered to a depth of about 4 times their size. Press down firmly with a board, and then out so that the plants will not become crowded. For early flowering they should be sown indoors in a shallow box, and transplanted to the open ground when the weather becomes suitable.

2292. Daylight. Early becomes covered with spikes of large white, pea-shaped blossom, which continue until late in Fall. Pkt. for 25c; pkt., 10c.

2293. Darkness. Identical with "Daylight" except in color, which is a rich purple violet. Pkt. for 25c; pkt., 10c.

2294. Lablab, Mixed purple and white. Oz., 25c; pkt., 10c.

Dusty Miller. See page 73.
2295. Echinocystis. Wild Cucumber Vine. A well known vine in many sections, and the quickest climber known for covering verandas, old trees and houses, trellises, etc., never suffering from the heat but retaining its fresh and lively green color; never infested with insects, and very profuse in bloom. It will sow itself and come up in the same place. Sow seed in Fall. Pkt., 5c; oz., 25c.

2296. Eschscholtzia, California Poppy. A slowly, free-flowering plant so popular with everyone as to scarcely need introduction. Particular attention is drawn to Helenium often called Irish Echinocystis, offered on page 256. This is a beautiful herbiaceous perennial, which flowers freely the first year and bears a great abundance of brilliant yellow tulip-shaped flowers. Do not overlook this beautiful variety in placing your orders. 2297. Golden West. Bright yellow with large rayed blooms of deep orange at base of petals. Oz., 25c; pkt., 5c.

2298. Mandarins. Inner side of the petals rich orange, outer side brilliant scarlet. Oz., 25c; pkt., 5c.

2299. Rose Cardinal. Large flowers of intense carmine. Oz., 40c; pkt., 10c.

2300. All Colors, Mixed. Oz., 25c; pkt., 5c.

2301. Perennial Varieties. See page 89.

2302. Fuchsias. As easily grown from seed as from cuttings, and from seed many new varieties are obtained. They will flower freely the first year in the open ground, while the plants can be taken in the house in the Winter, where they will flower freely. Pkt., 25c.

2303. Double and Single Mixed. Fuchsias are as easily grown as from seed as from cuttings, and from seed many new varieties are obtained. They will flower freely the first year in the open ground, while the plants can be taken in the house in the Winter, where they will flower freely. Pkt., 25c.

2304. Gaillardia, Blanket Flower. Remarkable for the profusion, size and brilliancy of their flowers, continuing in bloom from early Summer until November. Excellent for borders or for cutting.

2306. All Annual Varieties Mixed. Oz., 25c; pkt., 5c.

2307. Geranium. A new way to secure Geraniums as they will flower freely the first year with charming new varieties. In fact, propagation by seed is the only way to obtain new varieties. See page 100 for plants.

2308. Zenale. A superb strain of the largest and finest varieties. Pkt., 10c.

2311. Gloxinia. Hybrid strains. The Gloxinia is one of the most beautiful flowers, very few possessing the depth of color peculiar to this superb genus. All unsurpassed strain, containing the spotted Hybrids as well as the finest self-colored sorts. Pkt., 25c.

2314. Chrysanthemum Flowered. Perfectly double, the color is the brightest golden yellow. The flowers are so perfect in form that they resemble very much double Chrysanthemum-flowered Asters with long stems; grow seven feet high and bear profusely all Summer long. Pkt., 5c.

2317. Giant Russian. Immense single flowers, yellow with large black center. 6 feet. Pkt., 6c.

2318. Oriental. Very effective sort, particularly on account of its twisted petals, which resemble a Cactus Dahlia. Pkt., 10c.

2319. Persea. This is a beautiful dwarf variety of the miniature Sunflower. The plants form compact bushes about 12 inches high and about 15 inches through. Very useful for the front of borders or beds of plants of medium height. Flowers continually from early July until cut down by killing frost. Single; charming golden-yellow, with black center. Pkt., 10c.

2320. Cut and Come Again Sunflowers; Single and Double in a beautiful mixture of all varieties. You will be delighted with these, flowering as they do from June until killing frost. Indispensable as cut flowers and also very popular for garden decoration. Oz., 25c; pkt., 10c.

See page 90 for perennial Sunflowers.
Godetia. An attractive, hardy annual deserving more extensive cultivation. The plants bloom profusely and bear showy, mallow-like flowers of rich and varied colors. One foot in height.

2318. Grasses. Ornamental. For large beds or groups on lawns nothing gives a finer effect. 12 Varieties. Pkt., 10c. Flowers in a few weeks after sowing. Its graceful panicles of dainty blossoms and feathery foliage are unequalled for making up bouquets. Sow at intervals during the Summer. See page 88 for perennial variety.

2338. Helichrysum. Everlasting. Of yellow and scarlet. Frequently dried and used for winter bouquets. Flowers should be gathered when on the point of expanding. To 2½ ft.

2332. Heliotrope. Is a universal favorite on account of its delightful fragrance and long duration of bloom, flowering equally well as bedding plants in Summer or as pot plants in the house in the Winter. It is not generally known that Heliotrope may be raised from seed as easily as the Verbena. The best varieties in mixtures at 15c a pkt.; 2 pks. for 25c. For plants see page 103.

Hollyhocks, Everblooming Annual. A comparatively new class of easy culture and flowering as quickly from seed as any garden annual. The plants from early sown seed set out in May begin flowering in July; the May sown in August, but in either case, they flower profusely until frost. The plants are vigorous in growth and naturally branching in habit, and if given the best of treatment will thrive luxuriantly. The soil should be very rich, deeply dug, and during dry weather watered liberally. The diversity of forms and colors is delightful. There is a great variety of colors and color combinations in this strain, including maroon, pink, rose, crimson, white, cerise, scarlet and many varieties of dainty and exquisite blending. See page 88.

2335. Double and Semi-Doubled Mixed. Pkt., 15c; 250 seeds, 50c.

2337. Single Mixed. Pkt., 15c; 250 seeds, 50c.

2340. Humulus Japonicus. Japanese Hop. The plants sown in the open ground in the Spring and it will attain enormous dimensions very quickly. The foliage is luxuriant, and it is one of the best plants for covering verandas and trellises. Heat, drought and insects do not trouble it. See illustration on page 77. Pkt., 10c.

2342. Hunnemania. Giant Yellow Tulip Poppy or Bush Eschscholtzia. Flowers are a rich shade of butternut yellow, with feathery glaucous foliage. The best of the Poppy family for cut flowers, remaining in condition for several days. Seeds sown in May will produce flowering plants in July, which blossom continuously until hard frost. Pkt., 10c; ½ oz., 200 seeds, 50c.

2344. Ice Plant. Dwarf trailing annual, white flowers and thick, ornamental leaves which appear to be covered with crystals. Thrives in bright sunlight and dry situations. Pkt., 10c.

Impatiens Holstii. Charming plants for the decoration of the house or dinner table, producing bright, waxy flowers profusely and continuously.

2345. Dwarf Vermilion Orange. Dwarf compact growing variety of the attractive Impatiens Holstii. A very beautiful plant. It forms regularly branched bushes, 6 to 8 inches in height by 10 to 12 inches in breadth, and produces its lovely, bright vermilion orange flowers in the greatest profusion throughout the season. Foliage and stems light green. Planted out of doors in a half-shady situation or grown in pots, this dwarf variety will always be very effective and showy. Pkt., 25c.

2347. Dwarf Deep Scarlet. Another dwarf variety with dark foliage and stems; flowers about an inch across, of a beautiful deep scarlet. Equally as useful as the preceding sort. Pkt., 20c.

2350. Kochia. Summer Cypress or Mexican Fire Bush. An easily grown annual, which thrives in a variety of soil, and is best sown in the Spring. The foliage is of a bright green and of perfect symmetry; it attains a height of about 3 feet, and as the approach of Autumn the whole plant becomes a deep red, a splendid plant to divide the vegetable from the flower garden, or for forming a hedge for the Summer for any purpose. See illustration on page 77. Pkt., 10c.

2352. Lantana. Well known bedding plants, with clusters of Verbena-like flowers, producing pink, yellow, orange and white heads in great abundance. They have an agreeable aromatic perfume. Mixed. Pkt., 5c.

Larkspurs. This is one of the best known garden flowers. A vast improvement has been effected, by careful selection and attentive cultivation, in size and color of the blossoms and the general habit of the plant. Hardy annuals. (For Perennial Larkspurs see Delphinium, page 87.)

2354. Shell Pink. 10c. 2356. Pure White. 10c.

2357. Finest Mixed. All colors. 6c.

2358. Collection. Packet each of the four colors, 50c.
Lavatera. Annual Mallow. The soil should be well pulverized and the seed covered to a depth of about 4 times their size. This is in delicate perfume of the flowers. The pink and blue blooms are close during the day but expand and impart their fragrance in the evening. Oz., 25c; pkt., 10c.

Culture. Sow out of doors, when danger from frost is over, in the bed or border where they are to flower. The soil should be well pulverized and the seed covered to a depth of about 4 times their size. Press down firmly with a board, and thin out so that the plants will not become crowded. For early flowering they should be sown indoors in a shallow box, or in a hot-bed, and transferred to the open ground when the weather becomes suitable. Pkt., 10c.

Mignonne. Reseda. A well-known fragrant favorite, and no garden is complete without a bed of Mignonette. Sowing made in April and again in July will keep up a succession from early summer till frost. Culture. Sow out of doors, when danger from frost is over, in the bed or border where they are to flower. The soil should be well pulverized and the seed covered to a depth of about 4 times their size. Press down firmly with a board, and thin out so that the plants will not become crowded. For early flowering they should be sown indoors in a shallow box, or in a hot-bed, and transferred to the open ground when the weather becomes suitable. Pkt., 10c.

Majestic. Hybrid Spiral. Of strong branching habit, with spikes from 8 to 10 inches long; very fragrant. Oz., 25c; pkt., 50c.

Improved Red Victoria. Fine spikes of brilliant red. Pkt., 5c.

Large-Flowering Pyramidal. Flowers large, of a reddish tint; a good variety for the open ground. Oz., 25c; pkt., 50c.

Machet. Adapted for pot culture; dwarf pyramidal growth, bearing numerous flower spikes, boldly colored and very fragrant. Oz., 25c; 1 oz., 25c; pkt., 10c.

Parson’s White. Large spikes, pure white, very fragrant. Oz., 40c; pkt., 5c.

Salmon Queen. Strong, robust habit, with fine cutout petals, bright salmon-red flowers, intensely fragrant; fine for outdoor culture. Oz., 50c; pkt., 10c.

Mimosa pudica. Sensitive Plant. Curious and interesting; pinkish-white flowers, the leaves close and droop when shaken; 1 ft. Pkt., 10c.

Minneapolis Vine. Pilocynne Snaevis. We are glad to be able to offer this very beautiful vine, the seeds of which we have sold for years, to the delight of thousands who have bought them. The foliage is most elegantly cut and of a shiny, dark green. Flowers are small, white, and sweet-scented. It is of easy culture, rapid growth, and especially adapted for trellises. This is the most beautiful vine of which we know. Pkt., 15c; 2 pkts., 25c.

Morning Glory, *Convolvulus*. One of the most free flowering and rapidgrowing climbers, thriving in almost any situation. The flowers are very delicate, brilliant and beautiful.

2387. Japanese Improved or Giant Mikado Morning Glory. The flowers are of gigantic size, and the colorings and markings beyond description, ranging from snow-white to black-purple, with all the possible intermediate shades. They are edged white, having throat of one of the above colors; there is also an endless number having flowers spotted, marbled, striped, frilled and splashed. They are beyond question the largest and most beautiful of this handsome family of easy grown climbers and are the Orient’s best gift to flower lovers. Wherever climbers can be grown, our New Giant Mikado Strain should have a prominent place. The seed we offer is of our own importation direct from Japan, and embraces plain singles, (which are really the handsomest), semi-doubles, quilted and frilled, crimped and scalloped, and double. Oz., 25c; pkt., 10c.

2390. Tall Morning Glory Mixed. A great variety of colors of the old-fashioned, popular, rapid growing climber. Oz., 15c; pkt., 5c.

2391. Double Flowering Morning Glories. A very large percentage of the seedlings will produce double flowers. Oz., 40c; pkt., 10c.

2392. Dwarf Morning Glories Mixed. Hardy annual, 1 foot in height. Colors range from pure white to deep purple. Oz., 15c; pkt., 5c.

2395. Moonflower. Bears lovely white flowers 5 to 6 inches in diameter, with a fine painted star in the center. The flowers open at dusk, or earlier on cloudy days, at which time they are deliciously fragrant. Start the seed in the house and set out as early as safe in the Spring. Pkt., 10c.

2401. Nicotiana Affinis. Tuberose-flowered Tobacco. Description, with much-branched flowers, having many petals; the flowers are fragrant. In form the flower resembles Nicotiana Affinis, but having a short, stout tube, and, unlike that variety, does not close up in daytime, but remains open all day; the fragrance, while not so powerful as Nicotiana Affinis, is decidedly delicious. It is as easy to grow as Petunias. If placed indoors in early Spring and planted out in May it gives a continuous display of blooms all Summer and Autumn. It can also be sown in warm ground. Pkt., 15c.

2405. *Nicotiana* Sandersia Hybrids. A splendid type in a great diversity of color. All colors mixed. 100, 50c.

2407. *Nigella* Damascena. Grow in a Mist, or Dwarf in the Bush. A compact, free-flowering plant, with finely cut foliage, curious-looking flowers and seed pods; of easy culture, growing in any garden soil; hardy annual; bloom and mixed; 1 foot. Oz., 25c; pkt., 5c.

2409. Nemophila. Splendid free-flowering hardy annuals, of very neat, compact habit. Flowers are cup-shaped, appearing in many brilliant colors, the blue shades being particularly striking. Blossom continuously throughout the Summer, thriving best in a cool, or moist, shady place where the soil is not too rich. All colors mixed, with many shades of blue. Oz., 25c; pkt., 5c.

Culture for Nemophila. Sow out of doors, when the danger from frost is over, in the bed or border where they are to grow. The soil should be well pulverized and the seed covered to a depth of about four times their size. Press down firmly with a board and thin out so that the plants will not become crowded. For early flowering they should be sown indoors in a shallow box, or in a hot-bed, and transferred to the open ground, when the weather becomes suitable.

2410. *Eunorthera*. Evening Primrose. Beautiful, low-growing plant, producing large, silvery-white, rose and yellow flowers. They thrive best in a sunny position, but succeed in almost any situation or soil. Annual varieties; all colors mixed. Pkt., 5c.

2411. *Oxalis*. Beautiful small plants, suitable for the greenhouse, rockery, work, or outdoor culture; flowering the first year; half hardy perennial; 9 inches. For bulbs see page 116.

2414. Tropaeoloides. Exquisite, dwarf bedding plant with dark brown foliage, forming a dense mat; flowers deep yellow but inconspicuous. Height 3 inches; pkt., 5c.

A Sheet of Bloom.

Your flower seeds are hard to beat. My word is a sheet of bloom today. *Petunias, Dianthe, Cosmos and Cosmos* are blooming now. The garden seeds were simply immense. Lettuce, radishes, tomatoes, &c.; all Sterling brand, were fine. OTIS FLOYD, Texas.

Worth Their Weight in Gold.

I cannot praise your seeds too highly. They are the finest I ever used; worth their weight in gold.

JOHN WEBER, N. Y.

Book on Greenhouse Construction. By L. R. Taft. Various styles of greenhouse and plant house structures, also heating, ventilating, etc. Price, $1.00, (postpaid, 1.05).

Parsons on the Rose. By S. E. Parsons. Propagation, culture, training, classification and description. Price, $1.00, (postpaid, 1.10).

Northrup, King & Co.'s Mixtures of Nasturtiums.

For ease of culture, duration of bloom, brilliancy of coloring and general excellence nothing excels 3-nasturtiums. All they need is a moderately good soil in a well-drained, sunny position, and within a few weeks from the time they are sown until hard frost comes there is an endless profusion of their gorgeous blossoms. No annual will produce such a lavish profusion of flowers for so long a time, with the same small outlay of time and labor. The maximum of bloom is produced in light or sandy soils and seldom diminishes through the hot weather. The varieties offered below were selected from a very large number of sorts as the best and most distinct.

It is our intention that every package of seed, large or small, that bears the name of Nasturtium, shall carry its name on it, whether at all, or at any price. Our mixtures of Dwarf and Tall Nasturtiums are shining examples of Sterling excellence as applied to flower seeds. These mixtures are made very large and offer our varieties grown by the leading specialists of England, France, Italy, Germany and America. They embrace every variety desirable of the two sorts, and are adapted for covering verandas, trellises, stumps, etc.

2420. Northrup, King & Co.'s Sterling Mixture of Dwarf Nasturtiums. Pkt., 5¢; oz., 20¢; cr lb, 60¢; lb, $2.60.
2425. Northrup, King & Co.'s Sterling Mixture of Tall or Climbing Nasturtiums. Pkt., 5¢; oz., 20¢; cr lb, 60¢; lb, $2.00.
2430. Dwarf Nasturtium, Choice Mixed. Pkt., 5¢; oz., 10¢; cr lb, 50¢; lb, $1.00.
2440. Tall or Climbing Nasturtium, Choice Mixed. Pkt., 5¢; oz., 10¢; cr lb, 50¢; lb, $1.40.

Nasturtium Novelties.
2545. Tall Ivy-Leaved Mixtures. The plants are of running growth, with star-like pointed leaves of rich green, veined with white, so that we have set quite closely together, have a marked resemblance to the foliage of the hardy English Ivy, and the flowers are of medium size and of most distinct form. The petals are quite narrow, and standing well apart present a striking star-like appearance. Pkt., 10¢; oz., 25¢.
2550. Dwarf Ivy-Leaved Mixtures. A beautiful mixture, containing a remarkable range of color, including many not usually found in any other strain of Nasturtiums. Pkt., 10¢; oz., 25¢.
2555. Dwarf Golden Foliage Mixtures. A charming novelty of unusual beauty, the contrast between the clear golden yellow foliage and the flowers being most remarkable. This mixture contains all colors originated to date. Pkt., 10¢; oz., 25¢.
2560. Variegated Foliage Queen of Thomas Thumb Mixtures. The colors range from the deep crimson to pure yellow, and the flowers being most striking. This mixture contains all colors so far originated. The flowers are of many bright colors in pleasing contrast to the variegated foliage. Pkt., 10¢; oz., 25¢.
2562. Variegated Foliage Tall or Climbing Queen Mixed. A line mixture of this charming new variety, containing all colors so far originated. The flowers are of many bright colors in pleasing contrast to the variegated foliage, and are easy to grow as single plants, or for edging walks, or surrounding walls. Very showy and a decided novelty of most surpassing beauty. Pkt., 10¢; oz., 25¢.
2572. Variegated Foliage Polly of Training Queen Mixed. A line mixture of this charming new variety, containing all colors so far originated. The flowers are of many bright colors in pleasing contrast to the variegated foliage, and are easy to grow as single plants, or for edging walks, or surrounding walls. Very showy and a decided novelty of most surpassing beauty. Pkt., 10¢; oz., 25¢.
2575. Lob's Climbing Mixtures. A charming mixture of dwarf, mixed growth. Very desirable for pot culture or for borders around beds. The colors are most brilliant and beautiful, and the mixture contains many shades. Pkt., 5¢; oz., 15¢; lb, 50¢; lb, $1.50.
2493. Finest mixed colors. Pkt., 5¢; oz., 15¢; lb, 50¢; lb, $1.50.

Colours. Sow in indoors in early April, transplant to sunny border and plant out at the outside of planters of any richness as soon as Early May. Light sandy loam suits them best. One oz. of seed sows a 15 foot row.

Northrup, King & Co.'s Named Varieties of Nasturtiums.

Tall or Climbing Nasturtiums.

Elegant climbers for verandas, trellises, etc. Useful to cover unsightly rails and trails and trails of rough ground with fine effect. Excellent for seed pods for pickling while green and tender. 6 to 10 feet.

Price; any of the following varieties; pkt., 5¢; oz., 20¢; lb, 60¢.

2475. Chameleon. Various richly colored flowers on the same plant.

2478. Lemon Yellow. Clear yellow, red veins.

2482. Lilac. Light lilac.

2483. Orange. Pure orange.

2484. Pearl. Creamy-white.

2486. Rose. Deep rose.

2488. Scarlet and Gold. Scarlet; foliage yellow.

Lob's Climbing Nasturtiums.

Not be confused with the common tall Nasturtiums, far surpassing them in the remarkable beauty of the flowers. These are much larger than those of the old-fashioned kind, and usually the petals over the Climbing Nasturtiums are especially adapted for covering verandas, trellises, etc.

2508. Lilac. Lilac, deep purple.

2511. Silver. Silver.

2512. Silver. Silver.
Northrup, King & Co.'s Sterling Mixtures.

2615. Northrup, King & Co.'s Sterling Mixture. (Sold only in sealed packages.) A mixture of Pansies. This mixture is made up from over 100 of the finest named varieties grown by Pansy specialists of the Old and New World. In making up this mixture, expense is not regarded. Our aim is to possess the finest mixture of Pansies obtainable. We have never been equal. The diversity of coloring and marking is almost beyond belief. We will carefully return money paid for this mixture to anyone who says it is not the finest they have ever seen. Pkt., containing 100 seeds, 15c; 500 seeds, 40c; 1,000 seeds, 60c.

2618. Northrup, King & Co.'s Bedding Mixed. Composed of many standard sorts; admirably suited for beds or borders, strong growing plants, very free blooming. Pkt., 5c; 1 oz., 25c.

2617. Northrup, King & Co.'s Giant Fancy. (Sold only in sealed packages.) While all the Pansies in our bedding mixture are large, we do not include in its make-up many of the dwarf ones for, as a matter of fact, many of our customers prefer to buy them separately. Great improvement has taken place with the last two or three years in the size and character of the largest Pansies. Our Giant Fancy is the finest mixture of the large Pansies. For this is used only the seed from the very choicest blossoms. It includes the production of famous growers. Pkt., 10c; 100 seeds, 35c; 500 seeds, 2.25.

2622. Large Stained Giants. A mixture of large yellow or white shades with five striking blotches, very fragrant. Pkt., 15c.

2623. Masterpiece. A remarkable type, the border of each petal being almost curled or ruffled; the flower appears to be double. Pkt., 15c.

2624. Orchid Flowered Mixture. A new race showing beautiful tints of cream, pale mauve, blush, rose, primrose, with brown or golden yellow blotches which diffuse into rays or veils near the edge. The upper petals are cadet and the Orchids. Pkt., 15c.

2625. Odier's Five Blotched. Seed gathered only from especially selected, show plants. Extra large yellow and white flowers. Pkt., 15c.

Giant Flowering Pansies.

2584. Cardinal. Of all so-called scarlet this is the nearest. Pkt., 15c.

2585. Comet. White porcelain with fine blue or violet stripes on lower petals. Pkt., 15c.

2592. Fire King. Lower petals bright reddish brown, on lower ones a dark blotch with yellow margin. Pkt., 15c.

2602. Peacock. Upper petals steel blue, remainder are deep chestnut with white margins. Very striking. Pkt., 10c.

2605. Pretiosa. Purple blotch on crimson back ground, pure white edge. Large flowered, cactus. Pkt., 15c.

2608. Snow Queen. Large silky white, light yellow center. Pkt., 15c.

2614. Vulcan. Magnificent deep red with five very large black spots on frilled petals. Pkt., 15c.

2612. White with Eye. Large blossom with purple eye. Pkt., 15c.

Pansy Culture.

Types of Northrup, King & Co.'s Sterling Pansy Mixture.

For Spring plants the seed may be sown broadcast from July to September. Over the seed very lightly with fine soil and press in with a board; then mulch the seed bed with straw, strawy manure, to a depth of 3 or 4 inches. The seed will be up in about 10 to 15 days, then remove the straw a little at a time. Transplant the seedlings to beds or frames in September or October and after a sharp frost, late in November or early December, provide a light or loose mulch of hay, straw or litter. The seed may also be sown indoors in January or February, or in Spring in the open ground, in a shady cool spot where the plant can be protected from the strong mid-day sun. The soil should be very rich and liberal applications of bone meal should be given from time to time. Pansies usually come to flower from seventy to eighty days from the time of sowing, under reasonably favorable conditions. They are natives of Western Europe where the climate does not have such extremes of temperature as ours. Consequently they do best in cool growing weather such as usually occurs in the Spring or late Summer and Fall.

A Customer for Fifteen Years.

I have used your seed for fifteen years and found them good, especially your Pansy seeds. Our Pansy bed is lovely. (MRS.) J. C. WRIGHT, Iowa.

For Pansy plants see page 100. All flower and vegetable seeds are sent prepaid except where otherwise noted.
Violas or Tufted Pansies

Violas are not yet fully appreciated, however nobody needs to see them more than once to realize how much they add to a garden. A border of these plants at Como Park, St. Paul, delighted thousands of visitors. They are a remarkably free blooming, hardy annual, especially adapted to shady places. The flowers are not so large as the other varieties of Pansies offered on page 30, but they bloom much more freely. Where more color effect is wanted they are superior to Pansies. Used in masses or as border plants they are fine for edging walks or beds of taller blossoms.

Seeds sown in March or early April produce flowering plants in June, which are a mass of bloom from their untimely frost.

2630. Finest Mixed Colors

Viola odorata. Sweet Scented Violet.

The deliciously fragrant, old-fashioned bouquet flower. It was popular in our Grandmothers' day and is still a favorite everywhere; a splendid hardy perennial. Violas are easily grown from seed, doing best in a cool, moist, partially shaded situation. The seeds being hard shelled often take several weeks to come up. Any of the following, 10c per packet.

2626. Blue 2628. White 2629. Mixed, blue and white

PETUNIA

The Petunia is peerless among annuals for effective Summer bedding or window boxes. It is of easy culture, early to bloom and continues all the Summer until frost. No other flower produces a greater diversity of color, or retains its freshness for so long a period. The doubles may be perpetuated, by cuttings in late Summer, for Winter house plants. Provide good soil and a sunny location. We have prepared these mixtures with the greatest care, and know that they are especially fine.

2585. Northrup, King & Co.'s Extra Large Flowering Petunias. (Sold only in sealed packages.) Mixed. This mixture embodies all of the latest varieties, and will prove an endless source of surprise even to those who expect much. All odd and notable kinds, black, crimson, white with yellow throats, marbled, veined, striped, variegated, etc. Pkt., 15c.

2586. Fine Mixed. Excellent for bedding, many splendid colors. Oz., 25c; pkt., 10c

2585. Striped and Blotched. An excellent strain of the small-flowering type. Fine for massing. All colors 14 oz., 25c, pkt., 10c

2570. Giants of California. The "Giants of California" petunia's bear gigantic flowers often five or more inches in diameter, of an astonishing variety of colors. They embrace every conceivable shade of crimson, pink, lavender, yellow, black, pure white, etc. One of the chief points of excellence is the deep throat and diversity of veining in the throat. Many of the flowers have a clear yellow throat, while others have a pure velvety black one, so deep that it seems to show no veining; many are deeply lined and netted on a white, pink or lavender ground. Many flowers are beautifully ruffled and frilled. Our strain is unexcelled, being saved especially for our critical trade by a leading Petunia specialist. Pkt., 25c.

2572. Rosy Morn. Of compact growth covered completely with beautiful flowers one and one-half inches in diameter. The throat is silvery white, while the edge is heavily flushed with a rosy pink. Very desirable for beds or borders. Pkt., 10c

2576. Bedding Petunias. A superb strain of elegant, large flowers remarkable for their brilliance and variety of color. Splendid for bedding. Pkt., 10c

Culture. Sow in May when the ground is warm, in the bed or border where they are to flower. The soil should be well pulverized and the seeds covered to a depth of 4 times their size. Firm with a board and thin out so that the plants will not become crowded. For early flowering sow indoors in a shallow box, or in a hot-bed, and transfer to open ground when the weather becomes suitable.

The weaker Petunia seedlings should be carefully saved. With attention these small seedlings develop splendidly and frequently produce the finest double flowers.

Northrup, King & Co.'s Extra Large Flowering Petunias

Trailing Petunia.
Phlox Drummondii. Of all summer-flowering annuals the varieties of Phlox Drummondii are unquestionably some of the most brilliant and satisfactory. Seed may be sown in the open ground any time after danger of frost is past, and in a few weeks the beds or borders are aglow with their brilliant coloring and remain so until cut down by frost. For early flowering seed should be started indoors or in a hotbed. For perennial Phlox Roots see page 95.

2649. Mixed Colors. O.z., 50c; pkt., 5c.

Grandiflora Varieties. Large Flowering. The following six colors are considered the brightest, best and most distinct for bedding;

2642. Pure White ........................................... Pkt., 10c
2643. Shell Pink ............................................... 10c
2644. Deep Rose ............................................... 10c
2645. Crimson Beauty ........................................ 10c
2646. Royal Purple .......................................... 10c
2647. Blood Red ................................................ 10c
2648. Grandiflora, Choicest Mixed. O.z., 75c; pkt., 10c

Culture for Phlox. Sow out of doors, when danger from frost is over, in the bed or border where they are to flower. The soil should be well pulverized and the seed covered to a depth of about 4 times their size. Press down firmly with a board, and thin out so that the plants will not become crowded. For early flowering they should be sown indoors in a shallow box, or in a hot-bed, and transferred to the open ground when the weather becomes suitable.

2650. Large Flowering Dwarf Varieties. A type combining the size of the individual flower and the head of the finest Grandifloras with the dwarf, compact growth of the dwarf sorts: altogether a perfect combination. Finest mixed colors. 1/4 oz., 10c; pkt., 15c.

Culture for Physalis Franchetti. Should not be sown in the open ground before latter part of May. The best plan is to start the seeds indoors in a shallow box or in a hot-bed, in a temperature of about 65 degrees. Cover the seeds to a depth of four times their size and press the surface firm with a board. Water with a fine spray. Transplant the seedlings after the second leaves form and remove to the garden when the weather is warm and settled.

Portulaca. Will grow and bloom abundantly all summer in a dry, hot location, where most other plants would soon die. The flowers are of the richest colors and make a beautiful border.

2660. Parana. This new giant-flowered type from South America produces immense, single blossoms often an inch across, bright ruby red in color. They are of very vigorous growth and flower profusely. Pkt., 15c.

Culture for Portulaca. Sow in the open ground when danger from frost is past. Cover the seeds to a depth of four times their size and press the surface firmly with a board. Water with a fine spray. Thin out so that the plants will not become crowded. For early flowering sow in hot-bed or shallow boxes in the house in March, transferring to the open ground in May and June.
POPPIES

In both color and form, Shirley Poppies are the daintiest, most exquisite blossoms imaginable. Posed on their long stems like graceful birds they appear to be hovering but a moment before darting away. Their silken gossamer petals vary in shade from scarlet and maroon to pale rose and white.

The blossoming period lasts but a few weeks, which necessitates repeated sowing as intervals for constant bloom. They should be sown as early in the Spring as possible, where the plants are to remain, as they do not bear transplanting. When planted with Bachelor's Buttons they make a charming combination bed. As cut flowers they are short lived but if their stems be dipped in boiling water right after gathering, they will last much longer.

**Single Annual Poppies.**

2680. Northrup, King & Co.'s Sterling Single Mixture. (Sold only in sealed packages.) Embraces all the leading best single varieties. As is always the case with our Sterling Mixture, it has been our aim to include in this mixture every good variety. O.z., 50c; ¼ oz., 1½c; pkt., 10c.

2685. Poppy, Shirley. The flowers are large, exceedingly graceful and elegant; the colors are pure, soft and varied and range from bluish-white, rose, delicate pink and carmine, through innumerable tints, to bright sparkling crimson. O.z., 50c; pkt., 10c.

2687. Danecroft, or Danish Cross. Very showy variety, producing large single flowers of brilliant scarlet, with a silvery-white spot on each petal, thus forming a white cross. O.z., 25c; pkt., 5c.

2690. Umbrosum. Richest vermilion, with a deep, shining black spot on each petal. O.z., 50c; pkt., 5c.

2692. English Scarlet. The common field Poppy of Great Britain; dazzling scarlet. O.z., 25c; pkt., 5c.

2694. Flag of Truce. Satiny-white flowers 3 to 4 inches across. O.z., 25c; pkt., 5c.

2696. Tulip Poppy. A magnificent specie from Armenia. The plants grow about 14 inches high; produce from 50 to 60 large tulip-like flowers of dazzling scarlet. O.z., 60c; pkt., 10c.

2698. Fire Dragon. Very showy and free-flowering, producing flowers of brilliant deep scarlet, with black spots, margined white, 2 to 2½ feet. O.z., 50c; pkt., 10c.

**Double Annual Poppies.**

Beautiful fringed blossoms on strong, vigorous stems. Double Poppies make splendid cut-flowers. Striped, tinted and shaded, they resemble big, lacey rosettes. The flowering period of Double Poppies is very much longer than that of the Single Shirlies and the plants need more space to develop to perfection.

**Culture.** Sow out of doors when danger from frost is over. In the bed or border where they are to flower. For constant bloom sow at intervals of two weeks. The seed bed should be especially well prepared—raked and pulverized until very fine and then well firmed. Mix the seed with an equal quantity of fine soil, to facilitate even sowing. Sow on the surface and press down firmly with a board. When the seedlings develop the second leaves thin out to prevent crowding. They should stand at least 4 inches apart.

For tobacco spray for slugs, see page 157.

2705. Northrup, King & Co.'s Sterling Double Mixture. (Sold only in sealed packages.) Includes all of the best double varieties of large-flowering Poppies of all colors, also many varied tints and combinations of color. Many of the blossoms are 6 to 7 inches in diameter and as double as Peonies, 30 to 36 inches high. They are fine for cut-flowers or garden display. O.z., 50c; ¼ oz., 1½c; pkt., 10c.

2707. American Flag. Beautiful variety; flowers very large and double, snow white, bordered with scarlet. O.z., 25c; pkt., 5c.

2714. "Mikado" (The Striped Japanese Poppy.) This beautiful Poppy is very distinct in character and color. The flowers are brilliant scarlet and white with elegantly curled petals, like a Japanese Gredanthemum. O.z., 25c; pkt., 5c.

2718. Carnation Flowered. Splendid, double, fringed flowers Mixed colors. O.z., 25c; pkt., 5c.

2720. Peony Flowered. Large, showy, double, globular flowers, resembling a double Peony. Mixed colors, O.z., 25c; pkt., 5c.

Perennial Poppies. See page 90.

California Poppy or Eschscholtzia. See page 75.

All flower seeds are sent prepaid.
Northrup, King & Co., Seedsmen, Minneapolis, Minn.

2723. **Pyrethrum Aureum. Golden Feather**. Very popular, a perenn. plant for edging, carpet-bedding, etc. Pkt., 10c.

2724. **Ricinus. Castor Oil Bean**. Ornamental plants of stately growth and picturesque foliage. With brilliant colored fruit, producing a sub-tropical effect; fine for lawns, borders, massing or center plants for beds.

Culture. Sow out of doors, when danger from frost is over, in the bed or border where they are to flower. The soil should be well pulverized and the seed covered to a depth of about four times their size. Press down firmly with a board, and thin out so that the plants will not become crowded. For early flowering they should be started indoors in a shallow box, or in a hot-bed.

2725. **Borbonia. Very large and beautiful, green foliage; 15 ft.**

2726. **Gibsoni. Dwarf branching habit, deep red foliage; 5 feet.**

2727. **Zambesiensis.** Have light and dark green leaves and some of coppery bronze tinge to dark green with reddish tints. Oz., 15c; pkt., 5c.

2728. **Mixed.** All sorts, best varieties. Oz., 15c; pkt., 5c.

**Salpiglossis. Painted Tongue.** Very beautiful hardy annuals, flowering freely from July to early Autumn. Rich soil should be provided, with plenty of space for plants to develop.

2732. **Large Flowering Mixed.** The exquisite beauty of the flowers, with their rare combination of color, is a revelation to all who may see them for the first time. A splendid variety of color, flowers of large size. Pkt., 5c.

2733. **Salvia. Emperor.** This new variety forms only one leading stem, and bears on its summit a veritable bouquet of the most beautiful flowers, each one richly veined with gold, and much larger than the finest of the “Grandiflora” type. Pkt., 10c.

2740. **Salvia Splendens.** Excellent for filling large beds or borders in the garden; continues in bloom from early August until the first killing frost. Beautiful scarlet, large flowering; 2 1/2 ft. high. 

2741. **Clary Redman.** (Bonfire.) The plants form handsome, globular bushes about two feet in diameter. The dazzling scarlet spikes grow upright and stand clear above the foliage, enveloping the plant. Pkt., 10c.

2748. **Salvia Plum.** Splendid new variety. It resembles Salvia Splendens in shape, but is covered with gorgeous plumes, each of which is a bouquet in itself. Color is bright scarlet. Pkt., 25c.

2750. **Scabiosa. Mourning Bride.** One of our handsomest and most popular annuals, producing in great profusion very double flowers in a variety of shades and colors. Excellent subjects for cut flowers, lasting nearly a week after being cut. Sow the seeds in May and thin out the young plants to 6 inches apart. Mixed, pkt., 5c.

Stocks. **Gilliflower.** This Stock is one of the most popular annuals, either for bedding or pot culture; for brilliancy and diversity of color, fragrance, profusion and duration of bloom it is unsurpassed. Start the seeds in February and March, and as soon as the plants have their second pair of leaves, prick out into shallow boxes and in about four weeks the plants will be ready to pot; from which they should be transplanted to the open ground in May or June.

2785. **Large Flowering Ten-Weeks Stock.** This is the leading class for bedding out or Summer blooming.

2786. **Blood Red** Pkt., 10c.

2787. **Bright Pink** Pkt., 10c.

2788. **Purple** Pkt., 10c.

2789. **Pure White** Pkt., 10c.

2790. **Light Blue** Pkt., 10c.

2791. **Canary Yellow** Pkt., 10c.

2792. **Mixed Colors** Pkt., 5c.

2793. **Collection, 6 separate colors, one packet of each for...Pkt., 50c.

2798. **Thunbergia. Black Eyed Susan.**

Beautiful, rapid-growing annual climber, preferring a warm, sunny situation; used extensively in hanging baskets, vases, low fences, etc., very pretty flowers in buff, white, orange, etc., with dark eyes; mixed colors; 4 feet. Pkt., 50c; pkt., 5c.

For hot-beds see page 18. By sowing seed in the hot-bed in March or April it is possible to raise strong plants for bedding in May. This method is strongly recommended for Asters, Antirrhinum, Balsam, Candytuft, Castor Oil Bean, Dusty Miller, Heliotrope, Lobelia, Petunias, Salvia, Verbena and Vinca.
VERBENA

Culture. Should not be sown in the open ground before latter part of May. The best plan is to start the seeds indoors in a shallow box or in a hot bed, in a temperature of about 65 degrees. Cover the seeds to a depth of four times their size and press the surface firm with a board. Water with a fine spray. Transplant the seedlings after the second leaves form and remove to the garden when the weather is warm and settled.

Northrup, King & Co.'s Mammoth Verbena. (Sold only in sealed packages.) The largest Verbena known is a single flower, often being as large as a twenty-five cent piece. The beauty of this plant is well known and scarcely needs comment. For garden beds or effective massing the Verbena is unequalled. They bloom profusely the first year, and the flowers lasting until late in the Autumn. Thrives best in a sweet turf, loam, and should be given space to trail over the ground. Verbena should not be grown in the same place two years in succession.

2801. Mammoth Pin Cushion. Pkt., 10c
2802. Mammoth Purple
2803. Mammoth White
2804. Mammoth Blue
2805. Mammoth Yellow
2806. Mammoth Poppy
2807. Mammoth Blue
2808. Mammoth Yellow
2809. Mammoth Auricula Eye
2810. Mammoth Blue, White Eye
2811. Mammoth Scarlet Pkt., 10c
2812. Mammoth Mixed
2813. Mammoth Mixed
2814. Collection of Mammoth Verbena, 6 colors for 50c
2815. Fin Mixed. All colors of the older sorts.
2816. Verbena, It Is Scented. This fragrant plant is easily grown from seed, and so that you can cut its fragrant foliage and flowers to make up Victorian bouquets. Pkt., 5c.

WINCA. Madagascar Periwinkle, or Old Maid.

Ornamental free-blooming plants; splendid for bedding; dark, glossy foliage and handsome pink and white flowers. It is best to start seed early indoors or in a hot-bed. Seed germinates slowly. Plants can be potted in the Autumn and kept in bloom all Winter.

2830. Alba. Pure white
2831. Rosea. Rose, dark eye
2832. Mixed, all colors

ZINNIA. Youth and Old Age.

One of the most brilliant and showy of annuals, and has long been a general favorite. They come in flower early in the Summer, and keep on blooming until hard frost. Require little attention and succeed almost anywhere. For perfection of bloom start the seeds in March, and prick out or twice before transferring to the open border in May or June. Provide the plants with plenty of space, at least 18 inches apart each way, and they soon completely cover the ground.

Culture. Should not be sown in the open ground before latter part of May. The best plan is to start the seeds indoors in a shallow box or in a hot bed, in a temperature of about 65 degrees. Cover the seeds to a depth of four times their size and press the surface firm with a board. Water with a fine spray. Transplant the seedlings after the second leaves form and remove to the garden when the weather is warm and settled.

Northrup, King & Co.'s Double Improved Large Flowering Zinnia. (Sold only in sealed packages.) This is considered the best type for general use; forming bushy compact plants not over 2 feet high, and bearing flowers as large as the tallest varieties. In our special imported strains of Double Zinnias are found the most perfect and beautiful types which have yet been produced by the flower specialists of Europe and America. We are confident that they will please all who grow them.

2817. Double White
2818. Double Orange
2819. Double Salmon Rose
2820. Double Scarlet
2821. Double Canary
2822. Double Jacquinot
2823. Collection of separate colors for 25c
2824. Double Mixed, all colors, 40c; pkt., 5c.

IMPROVED LARGE FLOWERING ZINNIA

Has Been a Delight.

Last year I wrote you that my Perfume Plants or Evening Scented Stock (Matthiola Incana) were a disappointment; that I could detect no perfume. That was because I failed to realize how purely on evening plant it was. You kindly sent me another package to try again. I did so and the result has been a delight this year; the plant being all you claimed; the whole yard being filled with the exquisite perfume. Seldom has an evening passed that I have not gone out in the yard to pick a few sprays of flowers for my room.

(Mrs. W. N. BICKENHACK, Ohio.

All flower and vegetable seeds sent prepaid except where otherwise noted.
HARDY PERENNIAL FLOWER SEEDS

Culture. Everyone likes perennials because they are permanent—once established they come in size and beauty. Many sorts are raised from seed, usually blooming the year after sowing. The seed bed must be well drained, fine and firm. If the soil is at all heavy cover with one inch of sand. The seed may be planted from June 10th to early July. After sowing the seed 24 hours, sow the seed in rows, 3 inches apart, on the surface of sand or well sifted soil, and press down with a board. Large seeds may be covered to twice their thickness. The bed must be kept shaded constantly with a screen made as follows: take canvas 2 inches apart on end strips. Place this screen over the bed on 4 bricks set endwise. Water as required, when seedlings have two pairs of leaves transplant into rows a few inches apart each way, and later when they begin to crowd transplant a second time. This involves extra work but is necessary to raise sturdy plants. Keep them shaded with the screens all summer. In September, if well developed, they may be planted in their permanent locations where they will bloom the following year, or left in the seed beds for early spring transplanting. After the ground is freed from snow, raise 2 inches of either leaves or straw pilled on top. In late March, remove one-half the mulch and loosen up the rest, to admit air. Take off the remainder gradually, as the season advances.

For Perennial Plants—see pages 91-99.

3201. Achillea, Double White Yarrow. One of the best hardy white perennials. Grows about two feet high and from Spring until frost is covered with heads of purest white, double flowers. Pkt., 15c.

3205. Anchusa, Italian Dropmore Variety. Blue, large, for-get-me-not-like flowers. Very fine for the back of the perennial border or for a screen. 5 feet high. Pkt., 10c.

3210. Alcohol. Yellow. A native of England; grows about 1 foot high, bearing in profusion, daisy-shaped, yellow flowers which come in July and August. It is attractive, hardy perennial, producing large flowers; few plants compete with them in beauty; fine for bouquets. Pkt., 5c.

3211. Coronaria, Mixed Colors. Pkt., 5c.

3214. Anthemis tinctoria. Hardy Marguerite. A native of England; grows about 1 foot high, bearing in profusion, daisy-shaped, yellow flowers which come in July and August. It is attractive, hardy perennial, producing large flowers; few plants compete with them in beauty; fine for bouquets.

3215. Northrup, King & Co.'s Single Long Spurred Hybrids. All colors mixed. Pkt., 10c.

3216. A. coerulea alba. Pkt., 10c.

3217. A. chrysanthemum. Pkt., 10c.

3219. A. oxysepala. A. one of the most charming of all the Chrysanthemums. It is a native of Siberia; very hard and seems to be more permanent than many species. Pkt., 15c.

3221. A. 'Sherwood.' Pkt., 10c.

3223. Arabis alpina. A low, early blooming perennial with white, fragrant flowers. For edging, borders or covering steep banks. Pkt., 10c.

3224. Armeria plantaginea. Sea Pink. Thrift. Flowers in close, round heads; color shaped like white clover heads, fine for bouquets. Pkt., 10c.

3227. Double. Pkt., 10c.

Campanula. Bellflower. Beautiful, hardy, herbaceous perennials, bearing a great profusion of attractive bellflowers, thrive best in light soil. They will continue to bloom for weeks if given a partially shaded location.

3232. C. carpatica. Very charming plants, six to eight inches high, deep blue flowers. Pkt., 10c.

3235. C. glomerata. One to two feet high. Flowers bluish-violet and white. Pkt., 10c.

3250. C. paniculata. 15 to 18 inches high; flowers nearly white, spotted with red. Pkt., 10c.

3260. C. acmenis. A dainty little plant; will succeed in any good soil. Pkt., 10c.

Canterbury Bells. Campanula calycanthema. Produces large, bell-shaped flowers, three inches in length, with three to four inches in diameter. The plants form pyramids of bloom bearing from 100 to 200 of these exquisite blossoms for weeks during the early Summer. A hardy biennial, 2 1/2 feet high, flowering the second season from seed. See illustration, page 86.

3246. Striped—White, striped blue. Pkt., 10c.

Canterbury Bells. Campanula medium. The old-fashioned variety which produces large, bell-shaped flowers. Pkt.

3255. C. Maximus. Or Eye Daisy. Flowers like the wild white Daisy.

Christanthemum, but twice as large. Handsome when in flower and the flowers have good stems for cutting. Hardy and easily grown in full sun. Pkt., 10c.

3261. C. Daisylake. A hardy perennial bearing large, pure white flowers, sometimes four inches in diameter, in great profusion on long, stiff stems fully two feet long. Pkt., 15c.

3262. Coreopsis. Lanceolata. A hardy perennial about 2 feet high. This produces an abundance of large, daisy-shaped flowers on long stems. One of the best of all perennials for cut flowers. See illustration above.

3263. Pkt., 10c.

Delphinium. Hardy Larkspur. Very decorative border plants running in height from 6 to 20 feet, tall, whose side shoots die down after the main spike has finished, thus prolonging the blooming period. If the flower spikes are removed as soon as they fade, new ones will continue to appear, at intervals all Summer. The color range from white to darkest blue. Some varieties have a brown ring in the center, others show a pleasing contrast, in shades of blue, between the inner and outer petals. Stake all varieties when 18 inches high to prevent their being blown down. For cultural directions see to page 86.

3266. D. elatum. Flowers very fine, dark to pale blue. Pkt., 10c.

3268. D. Cashmerianum. From the Himalayas, 18 to 15 inches high. Spreading, many branched. Flowers often 2 inches wide, azure blue. Upper petals almost black. Pkt., 15c.

3273. D. Gold Medal Hybrid, Mixed. Unquestionably the finest strain of mixed hybrids ever produced. This is the originator's strain consisting of the best named varieties. The plants are of very fine, vigorous habit, with large flowers in massive spikes, the majority running in the lighter shades of blue. Pkt., 10c; 5 pkt., $1.39.

3280. D. Stars, Russell's Selected. One of the finest yet offered. Flowers variable. Pkt., 10c; 25c; 1 oz., 51.75.

3282. Delphinium. Mixed. This fine mixture embraces all the preceding varieties, with several other named varieties. Pkt., 10c; 1/2 oz., 25c; 1 oz., 51.75.

Digitalis. Foxglove. A very interesting family of old fashioned plants, whose culture is so simple as to bring them within the reach of all. Flowers are large, cup-shaped, quite pretty. Pkt., 10c; 1/4 oz., 25c; 1 oz., $1.39.

3284. D. purpurea, var. glaucoidea. This has a very great variety of colors, but is difficult to keep them true when grown separately, we offer it only in a mixture. Everyone should plant this strain. It grows in strong clumps and is one of our very finest hardy perennials. Pkt., 10c.

3289. D. Siberica. Flowers are creamy white and quite attractive. Pkt., 10c.

Gaillardia. Blanket Flower. A very fine blooming perennial having large yellow or red daisy-shaped flowers all through the Summer. Easy to grow. See page 75.

3294. G. Coppy Red. Bears very large blossoms, coppery red shading into a lighter tone at the tips of the petals. Pkt., 25c.

Geum. Flowers are large, butter-cup shaped, borne in profusion; last well when cut, they are fine for bouquets.

3286. G. Double Scarlet. Large flowers, fine color. 2 feet. Pkt., 10c.

3288. G. Single Orange Scarlet. Pkt., 10c.

3295. Golden Rod. Solidago Canadensis. The well known, golden yellow favorite. Pkt., 5c.

For culture of perennials see top of page 86; see also cultural note on Phlox, page 95, which applies to nearly all other perennial plants, as well. See pages 91-99 for perennial plants.
HOLLYHOCKS.

There is a revival of the old-fashioned flowers and Hollyhocks are among the best of the old garden favorites. Always a stately and majestic plant, the improvements in them have been so great that one would scarcely recognize in the old single Hollyhock, the parent of the magnificent and truly gorgeous flower of today.

The most marked improvement is found in the Chater's and Allegheny strains. These are beautiful beyond description.

The Chater's produce for the most part, flowers which are densely double, although occasionally are seen among them some single blossoms. The colors are innumerable, ranging from pure white to deepest maroon, some are bright and gay, others of the softest and most delicate shades and tints. The stalks average about four feet in height but many are 6 or even 8 ft. high. These stalks are densely covered with blossoms as beautiful in texture and appearance as the Rose.

The Allegheny is of quite recent introduction. It grows very tall, and the flowers, though single, are of wonderful beauty and in great variety of color. The Chater's are beautiful beyond description, but the Allegheny is thought by many to be even still more beautiful than the Chater's. Hollyhocks form a capital background for a border of hardy perennials of lower growth, and are also very effective when planted in groups. Once established, as they easily are from seed, they re-appear in their place each year.

Hollyhocks thrive best in a rich, deep, well drained soil. As usually treated, the Hollyhock is a biennial, but if planted where the water will not settle around the crown in the Winter they become very satisfactory perennials. Follow cultural directions at top of page 80.

3325. Single Hollyhocks.
Many prefer the single-flowering Hollyhocks. They are usually of freer growth than the doubles and present a very handsome appearance. Mixed, pkt., 10c.

New Giant Flowering Marshmallows.

3326. Double Hollyhocks.

Chater's Double Hollyhocks.

Chater's Selected Strain. Extra Choice Double Mixed. Baby's Breath, Bridal Veil. The plants are small, stately and flowers as they lend a most graceful effect when combined in bouquets. This pleasing flower should be in every garden, for it is almost indispensable in the arrangement of flowers, either in vase, or bouquet work. See illustration on page 81. Pkt., 5c; ½ oz., 15c.

3328. Gypsophila Paniculata. Borne in feathery sprays, which are highly esteemed for cut flowers as they lend a most graceful effect when combined in bouquets. This pleasing flower should be in every garden, for it is almost indispensable in the arrangement of flowers, either in vase, or bouquet work. See illustration on page 81. Pkt., 5c; ½ oz., 15c.

3329. Helianthus autumnale. Old-fashioned garden plant, and among the most desirable of hardy flowers, also known as the daisy. Grows from 2 to 3 feet high, and bears spikes of showy white, lilac and purple fragrant flowers. Excellent for naturalizing among shrubbery or for planting in a permanent border; mixed colors. Pkt., 5c.

3333. Hibiscus. New Giant Flowering Marshmallow. Wonderfully improved form of the great native Marshmallow, in which flowers of great size—frequently ten to twelve inches in diameter—have been developed. Soft pink and pure white. Plants grow to 8 feet high. Blossom from July until late Autumn. Pkt., 15c.

Hibiscus. Marsh Mallow. Hibiscus are from 2 to 3 inches in diameter, their color is a rich deep cream with a velvety, maroon center. Plants grow from 3 to 5 feet high, and bear from 10 to 20 of their gigantic, bell-shaped flowers at one time. They commence to bloom when the plants are quite young and continue until late in the Fall. Pkt., 10c.

3301. H. Giant Golden Bowl. The flowers of this magnificent Hibiscus are from 2 to 3 inches in diameter, their color is a rich scarlet, with a rich crimson eye. The flowers are very large, often measuring 7 inches in diameter. It blooms from seed the first year sown in the open ground, lasts year after year. Pkt., 10c.

3361. *Iberis sempervirens. Perennial Candytuf.* Very free flowering, and attractive to butterflies. They again are excellent low-growing plants for the rock garden, growing best in a sunny location. Pkt., 10c. 

3362. *Lathyrus. Everlasting or Hardy Sweet Pea.* Showy, free flowering, hardy perennial climber, valuable for covering old stumps, fences, etc., continually in bloom. Good for cut flowers. They require a rich, deep soil. Pkt., 1c.

3365. *Lupinus polyphyllus. Lupine.* This will be found a great improvement on any other Lupine. It forms dense bushes about 4 feet high, of elegant spikes completely clothed to the ground with snowy-white and deepest sea-blue flowers. See illustration page 88. Delightfully fragrant.

3366. *Lychnis. Rose Campion.* Handsome plants of small size, well branched, with crimson, scarlet and pink, fine for green-house or moist, shady situations; half hardy perennials, blossoming the first year from seed if sown early. 1 oz., 10c.

3367. *Lythrum. roseum superbum.** Very hardy perennial; grows to 3 feet high and produces spikes of rosy flowers from July to September. Pkt., 10c.

3370. *Coreopsis lanceolata grandiflora.* This is one of the best of all perennials for cut flowers. Beginning to bloom in June, *it)* continues to display a profusion of golden blossoms all through the hot weather, until new flowers are produced, and are found in baskets, and used in flower arrangements. Very popular with the white of the blossoms; kept fresh by spraying when cut. For illustration see page 91.

3372. *Myosotis. Forget-Me-Not.* Will forthwith blossom in summer and fall. Flowers borne on long, stiff stems and the most exquisite sky-blue, with a delicate white center. They succeed best with moisture in a somewhat shaded position.

3373. *Nicotiana. Tobacco.* The flowers are used in the mixture in cigarettes, and in smoking tobacco. They are also used in the manufacture of cigars.

3374. *Physostegia. False Dragon Head.* These handsome plants flower from July until frost, growing 6 to 8 feet high and having spikes of white, pink, and red flowers. They are also used in the manufacture of cigars.

3375. *Platycodon. Japanese Bell-Flower.* Hardy, with handsome, branching spikes 2 to 4 feet high. Platycodon is considered by many the best bell flower. The illustration page 90 shows one of the blooms with which the white spike is furnished. They thrive in a rich, well-drained soil and are hardy in the ground in all parts of the United States.

3376. *Perennial Poppies.* These hardy varieties are very beautiful, blooming from June to frost. Pkt., 10c.

3377. *Polaroid. Iceland Poppy.* Similar to the annual Shirley Poppy, but in addition to the white, red and pink shades of the latter, the Iceland Poppy is often a fine yellow or orange color. Pkt., 10c.

3379. *Polygemon compactum. Knotweed.* Excellent hardy perennial, forming bushes 12 to 15 inches high, which are completely covered with a mass of foamy white flowers throughout the fall. Pkt., 10c.

3380. *Cordylines.* New White Oriental Poppy. A striking novelty, and the most distinguished break that has yet been made in the Oriental Poppies, being a pure white, with a bold crimson blotch at the base of each petal. These imported varieties are of immense importance as the first and most important addition to the list of new hardy perennial plants this season. Pkt., 10c.

3382. *Physostegia. False Dragon Head.* These handsome plants flower from July until frost, growing 6 to 8 feet high and having spikes of white, pink, and red flowers. They are also used in the manufacture of cigars.

3383. *Platycodon. Japanese Bell-Flower.* Hardy, with handsome, branching spikes 2 to 4 feet high. Platycodon is considered by many the best bell flower. The illustration page 90 shows one of the blooms with which the white spike is furnished. They thrive in a rich, well-drained soil and are hardy in the ground in all parts of the United States.

3384. *Perennial Poppies.* These hardy varieties are very beautiful, blooming from June to frost. Pkt., 10c.

3379. **Potentilla. Dark Red Cinquefoil.** This plant has just the good qualities one expects in a border plant. Handsome foliage, free blooming habit and flowers rising 18 inches high, bearing from July to August, its brilliant dark red flowers in profusion. These blossoms are much the shape of a Buttercup. The plant is of bushy growth, throwing up each year's stiff, erect stems, in appearance resembling a shrub more than the ordinary perennial plant. Pkt., 15c.

3386. **Primula Japonica. Japanese Primrose.** These are not so they deserve; they are hardy, of fine, vigorous growth, with dark green foliage, and send up in the late Spring innumerable sprays of large flowers in many colors varying from white to crimson. A moist, rich, almost longy soil is wanted for this fine plant. Very fine for naturalizing in grove or on a hillside. Mixed colors varying from rich crimson to white. ½ feet in height. Pkt., 15c.

3387. **Pyrethrum hybridum.** Bears large daisy-like flowers ranging in color from white to deep red with bright yellow centers; fine for cutting. Blooms in early Spring and again in the Fall. Single varieties, all colors mixed. Pkt., 15c.

**Rudbeckia. Cone Flower.** Splendid plants for interplanting with shrubs or for a tall border. They are free-flowing with blossoms like a small sun-flower, as suggested by the illustration below. These are borne on strong, erect stems, excellent for cutting. They are of remarkably easy culture, seldom attacked by insects or disease. The plants should be stakes when 3 feet high. Keep blossoms cut to prolong the blooming season.

3390. **R. Fulgida.** Very effective variety, producing in August and September, masses of brilliant, orange-yellow flowers, 3 feet. Pkt., 10c.

3392. **R. Newmanii. Magnificent Autumn flowering perennial; flowers large, bright orange-yellow petals; center maroon, cone-shaped. 3 feet. Pkt., 15c.**

3393. **R. Purpurea.** A most striking hardy perennial; flowers in Summer, very large, reddish-purple, an unusual but attractive color. 3 feet. Pkt., 15c.

3396. **Scabiosa caucasica.** White resembling in shape the annual Scabiosa, this hardy variety bears large blossoms of a delicate lilac blue shade. The plants grow about 2 feet high, blooming from July until frost. A fine plant for borders or for cutting. Pkt. 25c.

3397. **S. perfecta.** Outer petals lilac, inner petals center lilac. Unusually fine. Pkt., 25c.

For culture of perennials see top of page 86, sec pages 91 to 99 for hardy perennial plant list.
HARDY PERENNIAL FLOWERING PLANTS
For Permanent Planting in Borders or Beds.

There is an increasing demand for plants that are perfectly hardy and do not have to be taken up every Fall or replaced every Spring. The following list has been selected with care and contains a fine assortment of plants that make valuable permanent borders.

The old-fashioned gardens of our grandmothers contained a wealth of gorgeous bloom throughout the entire Summer from early Spring until Autumn. These gardens are again coming into popular favor, and since the advance of the new and highly improved strains of Hollyhocks, Peonies, Iris, Philox, etc., it is possible to convert them into veritable towers of beauty by a liberal display of hardy herbaceous perennials. Beginning almost before the snow is off the ground, early-flowering varieties open their blossoms, as welcome harbingers of Spring. Almost every week until late in the Fall some new variety bursts forth into entrancing loveliness, blooming so persistently as to almost defy Jack Frost in his efforts to subdue the floral kingdom. A start may be obtained at so small an expenditure as not to be counted when measured with the satisfaction and pleasure derived from them. Once planted they are there to stay, requiring very little care, increasing in size and bloom and growing better from year to year. Herbaceous means "like an herb," that is, the branches above the ground are not hard and woody, as with shrubs and trees. Perennial plants are those that live year after year, only dying to the ground in Winter, the roots remaining alive and dormant in the ground; this distinguishes them from annuals which must be raised from seed each season. Select your order in advance so that the plants can be sent in time to get an early start.

Key to size and blooming period. To assist the buyer in making selections from groups and in their proper arrangement when planting, we give average heights and season for blooming under average conditions. Thus the gardener can arrange for certain color schemes at various seasons.

The price in every case, is for strong, field grown plants, for shipment by freight or express at purchaser's expense. If single plants are wanted by mail, add 10c each to cover cost of mailing.

**Achillea. The Pearl.** One of the very best white flowering border plants, resembling Pompon Chrysanthemums. See page 86 for illustration. Each, 25c; dozen, $2.50.

**Anchusa. Italian Dropmore Variety.** Potent-flowered blue flowers borne in profusion on branching stalks 4 to 5 feet tall. They bloom from May to July, of very vigorous growth. Each, 25c; dozen, $2.50.

**Aquilegia. Columbine.** The distinct, clear-cut foliage and delicate arrangement of colors in the flowers of Columbine, make it one of the showiest and most desirable of the hardy garden plants; especially suitable for rockwork, at the base of foundation walls, and under trees.

**Armeria. Thrift or Sea Pink.** Splendid plants for flower borders or permanent edging, flowers shaped like clover heads.

**Boltonia Asteroides. False Chamomile.** Bushy plants 5 feet high, covered with dainty aster-like white flowers. Each, 25c; dozen, $2.50.

**Buddleya variabilis magnifica.** Butterflies love this new shrub-like plant, beginning to bloom in July. Grows 4 feet high, with long graceful stems that terminate in tapering panicles of beautiful lilac-like flowers, many heads being 10 inches long. Each, 35c; dozen, $3.50.

**Campanula Calycanthemum. Cup and Saucer.** A fine type of this old favorite, differing from ordinary Canterbury Bells in having a large calyx below the bell giving the flower a cup and saucer appearance. Blue, Pink, White or Mixed. Each, 25c; dozen, $2.50.

**Campanula Carpatica. Carpathian Hare-bell.** A pretty compact species, not exceeding 8 inches high, flowers clear blue, one inch in diameter. Each, 25c; dozen, $2.50.

**Campanula Medium.** The well known "Canterbury Bells." Bloom in July; heights 2 to 3 feet. Blue, Pink, White or Mixed. Each, 25c; dozen, $2.50.

**Centaurea Montana. Hardy Corn Flower.** Grows 2 feet high, bearing large violet-blue flowers from July to September. Likens freely. Each, 35c; dozen, $3.50.

**Chelone Lyons. Shell Flower.** Showy, deep red, gentian-shaped flowers borne on numerous spikes at this height. Each, 25c; dozen, $2.50.

**Dielysra. BLEEDING HEART.**
Chrysanthemum leucanthemum. Alaska Shasta Daisy. One of the most valuable perennials, blooms all Summer producing showy blossoms of the purest white. Each, 25c; doz., $2.50.

Coreopsis lanceolata grandiflora. One of the best of all the hardy plants for cut flowers. From June until frost its displays a profusion of golden blossoms uplifted on long graceful stems as in the illustration on page 89. Each, 25c; doz., $2.50.

Delphinium. Perennial Larkspur. Long, showy spikes of flowers from June until frost which furnish the most satisfactory flower for cutting. They vary in height from the 18 inch to the 5 foot. Among the best known varieties are: D. Belladonna. Freest blooming of all. The clear turquoise-blue of its flowers is not equaled for delicacy and beauty by any other flower. Each, 25c; doz., $2.50.

D. Chinensis. Fine stems and deeply cleft foliage; flowers all light shades of blue. 18 in. Each, 25c; doz., $2.50.

D. Chinensis Alba. Pure white flowers. Each, 25c; doz., $2.50.

D. Erythrostemon. The old fashioned very dark blue variety. 3 to 4 feet. Each, 25c; doz., $2.50.

D. Gold Medal Hybrids. A choice strain of Hybrids embracing all shades of blue and purple. Each, 25c; doz., $2.50.

Dianthus Bartlettii. Sweet Williams. A fine old garden variety, biennial, but one which perpetuates itself by self-sowing. Height 18 inches. Flowers in June and July. The colors are very bright and effective and in an endless variety of white, pink, purple, crimson and scarlet; many sorts variously edged, eyed and spotted. Single and double varieties mixed, each, 25c; doz., $2.50.

Dieltrya. Bleeding Heart. The pink and white heart-shaped flowers are borne on long graceful stems, making the plant a favorite with all. See illustration, page 38.

Digitalis. Fox Glove. Furnishes a grand display of thimble-shaped flowers in immense spikes during July and August.

Doronicum Excelsum. Orange-yellow, daisy-shaped flowers; 3½ in. across; to 2 to 3 ft. high. Each, 25c; doz., $2.50.

F. Subordata Grandiflora Alba. Large spikes of snow-white fragrant flowers in August. Each, 35c; doz., $3.50.

Guillardia Grandiflora. Blanket Flower. Makes one of the most gorgeous and profuse displays of all perennial flowers. Flowers often measure 3 inches in diameter, on 2 feet stems. A hard center of deep maroon is thinly bordered by petals of orange and yellow, strikingly rimmed by crimson, red and maroon. Poor soil will do, and a constant show is assured from June till frost. Each, 25c; doz., $2.50.

Geranium Sanguineum. Cranebill. A compact bush 1½ inches high, with graceful cut foliage and an all Summer profusion of red flowers. Each, 25c; doz., $2.50.

Gescomicum. Flowers are double, bright scarlet in color and last well when cut. Each, 30c; doz., $3.00.

Gypsophila Paniculata F. P. Double Flowering Baby’s Breath. Small white flowers on branched stems so thick as to give the plants a dense useful look. This new variety is already a favorite with florists for use with other cut flowers. Each, 35c; doz., $3.50.

Helenium. Sneezenet. Desirable border plant with tall, spreading clusters of daisy-shaped flowers which appear in the late Summer.

H. Riverton Beauty. Lemon-yellow, with a large disc of purplish-brown. Each, 25c; doz., $2.50.

H. Riverton Gem. Old gold changing to russet. Each, 35c; doz., $3.50.

H. Wolfs Deer or Tarts to bloom about 2 weeks after Miss Melish. Has very deep yellow flowers. Each, 25c; doz., $2.50.

H. Pincushion. Pin Head. Pincushion flower is very attractive. The flowers, orange yellow, with a pyramidal center of darker shade. Each, 25c; doz., $2.50.

H. Gerbera. Calla Lily. Effective in clumps and masses, numerous pendants of orange and yellow lily-like flowers protruding high above the grass-like foliage.

H. Dumaroiet. Dwarf and compact; 2 ft.; flowers orange. Each, 25c; doz., $2.50.

H. Flava. Lemon Lily. Crowned by beautiful lemon-colored flowers 3 to 4 inches in diameter, and delightfully fragrant. 3 feet. Each, 25c; doz., $2.50.

H. Kwanbo, ft. pl. (Double Orange Lily). Large, double, copper colored flowers. Each, 25c; doz., $2.50.

H. Spinosus. Blue Fuji. A clump of this very desirable plant when in full bloom dazzles the eye with its brilliant crimson spikes. Each, 25c; doz., $3.00.

H. Plate de Feu or Rain of Fire. Fiery scarlet blossoms. Each, 25c; doz., $7.50.

Hibiscus is the most useful of the shrub families. The fine old swamp Rose Mallow. Large purplish pink flower with large dark eye. 4 to 5 feet. Each, 25c.

Funkia subordata. White Day Lily.

Delphinium.

H. Crimson Eye. Immense flowers of purest white, with large centers of velvety crimson. Each, 25c; doz., $2.50.

Hibiscus. New Giant-Flowering Marshmallows. Noble shrub-like plants to 8 feet high, with handsome green foliage and flowers often 1½ to 18 inches in diameter. We offer strong rooted in three distinct colors, Red, Pink or White. Each, 25c; doz., $3.00.

H. Mallow Mr. Pink. Strong type, of upright habit, producing large flowers, crimson, white and mixed. Choicest mixed. Each, 35c; doz., $3.50.

H. Hollyhock. Indispensable plants, possessing a character peculiar to themselves which renders them especially valuable to break up any set effect in lawn planting, with their towering spikes of showy flowers. As usually treated the Hollyhock is a biennial, but if planted in rich loam where the water will not settle around the crown in the Winter they become very satisfactory perennials.

H. Double. Very double, roseate.
MENTHA SPIRATA. Old Fashioned Mint or Spearmint.

Pyrethrum Roseum. Foliage fine-cut and attractive; flowers borne profusely on straight stems, colored in all shades of rose. A splendid cut flower and conspicuous in the garden. Each, 25c; doz., $2.50.

Pyrethrum Uliginosum Stellata. Greatly improved form of the Giant Daisy but with long, narrow petals forming flowers one-half larger. The best Daisy for cutting during late Summer. Each, 25c; doz., $2.50.

Pyrethrum Uliginosum. Giant Daisy. One of the best September blooming perennials for the Northwest, bearing its large white flowers on 3 foot stems. Each, 25c; doz., $2.50.

Rosemary. Old favorite aromatic herb with deliciously scented foliage. Each, 25c; doz., $2.50.

Rudbeckia "Golden Glow." The most prolific and satisfactory hardy perennial of all yellow flowering sorts. Grows 2 to 3 feet and blooms from early Summer until frost. Flowers are produced on long stems in enormous quantities, and resemble golden-yellow Cactus Dahlias. Each, 25c; doz., $2.50.

R. Newmani. Dark orange flowers, with deep purple cone, borne on stiff stems, 3 feet high. July to October. Each, 25c; doz., $2.50.

R. Purpurea. Purple Cone Flower. Large drooping petals, reddish purple, with prominent cone-shaped center. Each, 25c; doz., $2.50.

R. Suber-Tomentosa. Similar shape, branched plant, 3 feet high. It is completely enveloped through the Summer in a mass of lemon-yellow flowers with dark center. Each, 25c; doz., $2.50.

R. Maximus. Variety of special merit, 5 feet high. Bright yellow flowers 3 to 6 inches across, borne continuously from July to October. Each, 25c; doz., $2.50.

Scabiosa Caucasia. Blue Bonnet Pincushion Flower. Soft blue lavender flowers, about 2 inches in diameter. These are borne on 2 foot stems. They last well as cut flowers. Each, 25c; doz., $2.50.

Stokesia Cyanaca. Stokes's Aster. One of the most charming hardy plants, freely blooming from July to October. Flowers of Centaurea shape, often measure four to five inches across, making a rich show of lavender-blue. 1½ to 2 feet. Each, 25c; doz., $2.50.

Sweat William. See Dianthus barbatus, page 92.

Tritonia. Flame Flower. Rush-like foliage supports smooth, thick flower stalks a yard long with a single daisy at the top. Each, 25c; doz., $2.50.

T. Pitzerii. An improved type of more perfect form, and showing a marked predominance of scarlet, the opened lower petals merely, being rimmed with orange. Each, 35c; doz., $3.50.

Trollius. Globe Flower. Desirable free-flowering kind, producing their giant buttercup-like blossoms on stems 1 to 3 feet high from May until August. Each, 25c; doz., $2.50.

T. Orange Globe. Large, deep-orange colored flowers. Each, 35c; doz., $3.50.

Veronica Longifolia Subsessillis. Grows about 3 feet high and produces many spikes of deep blue flowers. Each, 35c; doz., $3.50.

Vinca minor. Periwinkle. Green Trailing Myrtle. A dainty plant to spread along the ground, with basal leaves, and dark blue flowers. Each, 25c; doz., $2.50.

Yucca Filamentosa. Adam's Needle. A sturdy evergreen plant with long narrow leaves that are bright green the whole year. Each, 35c; doz., $3.50.

Hardy Perennial Collection.

The above varieties of Hardy Perennial Plants represent the very best sorts for northern growing, and were selected as being the very best. For the purpose of giving satisfactory results, season after season. We now offer a collection of twelve varieties of the collection, all for $2.50, by express at purchaser's expense. We cannot list the varieties as each collection may differ from the others and the date at which the order is received may also have something to do with what one may receive. Nevertheless each collection will prove of great interest and value to the purchaser and will be worth much more than is asked for it. One dozen perennial plants, 12 varieties, $2.50.
New Hydrangeas for Pot and Tub Culture.

These beautiful Hydrangeas in lovely shades of pink and white are not hardy like the common ones but make splendid subjects for porch and lawn decoration when grown in pots, vases or tubs. They are also very satisfactory in the window garden where their glossy foliage is attractive even when the plant is not in bloom.

They require rich loam soil, liberal watering and occasional application of bone meal or garden fertilizer. Before applying, remove an inch of surface loam, sprinkle a dessert-spoonful of bone meal on the earth below and replace top soil.

In some soils these varieties naturally flower blue. Producing this color artificially is sometimes difficult, owing to the natural chemicals in the water, etc. Sometimes steel filings are used for this purpose, or one-half pound of alum broken into small pieces and mixed with each bucket of soil.

Give the plants full exposure to the sun except when in flower, at which time slight shade will prolong their blooming period.

On the approach of freezing weather the plants should be gradually allowed to become dormant and dry off.

Remove them to a light cool cellar or similar place protected from frost, but cool enough so that new growth does not start. Water just enough to keep roots from drying up. Early in the spring bring them to a sheltered porch and increase the supply of water, again giving full exposure as the weather becomes settled. If it is desired to winter them in the window garden continue to water them freely so as to keep up the growth.

For hardy Hydrangeas see page 111.

We recommend shipment by express—purchaser to pay charges.

Avalanche. Large pure white, fine form, very free flowering. Each, 50c.

Fraicheur. A delicate shade of rose-white. Each, 50c.

Hortensia Standards. Trained to a tree-like form with a single stem 12 to 15 inches high. Pinkish-white. Each, $1.00.

La Lorraine. Very large crimped flowers, first pale then changing to deep pink. Each, 50c.

Little Mme. One of the latest introductions. Deep pink. Each, 75c.

Mme. Renee Gallard. Large panicles of milky white, irregularly dentated flowers, especially good for growing indoors. Each, 50c.

Otaksa. The variety so extensively used for Summer porch decoration, producing immense pink flower heads throughout the Summer. Each, 50c.
Hardy
Perennial Phlox.

We have attempted to illustrate here a head of Phlox, but unfortunately, small pictures can do but scant justice to such a subject. With this flower it is not the single blossom when it shows to best advantage but the whole mass, producing a blaze of color which stands out strikingly against a dark background of shrub or vine. The very name—"Phlox" means flame. What could be more appropriate? This plant is a native of North America and that is doubtless why it does so well here. Everyone succeeds with it and whoever likes cut flowers appreciates the many showy heads borne on long stiff stems.

Culture. Phlox plants grow larger year after year. As the plants become stronger the blossoms increase in number and size, reaching their highest development about the third or fourth year.

On this account they require liberal "feeding" and do much better with rich well enriched soil, being careful to spread out the roots and firm the earth so as not to leave a hard pall to the plants. Lastly, use compost or other mulch around the crowns to preserve the earth moisture.

A fairly open situation suits Phlox best, too much shade stunts growth, too much sun fades out the richer colors. Liberal watering every evening during the blooming period improves the blossoms. These should be removed as soon as they will to prolong the flowering season.

For Winter protection, as soon as the ground freezes hard, lay on a covering of straw or some other loose material. About the middle of March remove one-half this litter and loosen up the rest—removing it gradually as the sun becomes warmer. Water or ice remaining on the plant crowns for any length of time is sure to destroy them. In our list of Phlox we offer the very best varieties, ranging in color from white or lilac gray to fiery reds and deep purples. Many show combinations and lovely shades unknown in any other flowers. All bloom between July and September. For best effect, mass each color separately.

Our Special Offer. Strong one year old roots, each, 20c; doz., $1.25; $5.00; by express at purchaser's expense. If wanted by mail add the rate at the rate of 5c each for postage.

Superb Collection. One of each of the 19 choice varieties, for $3.75, postpaid. Any six varieties, purchaser's selection, $1.25, postpaid.

Africa. Brilliant red, with crimson-carmine eye.

Bacchante. Brilliant red, with crimson-carmine eye.

Coquelicot. Dwarf. A fine scarlet with crimson-red eye.

Elizabeth Campbell. Dwarf. New. Bright salmon-pink, with lighter shadings and dark red eye. One of the handsomest varieties which is of attracting attention everywhere.

Europa. Tall. A white variety, with very decided crimson-carmine eye; the individual flowers as well as the trusses are very large, entirely distinct, of remarkably sturdy, erect habit.

Frau Anton Buchner. The finest white variety yet introduced, having the largest trusses and individual flower.

Henry Merig. Tall. Beautiful variety; white, crimson-carmine center.

Mme. Paul Dutrie. Medium. A delicate lilac rose, reminding one of some of the beautiful stream Orchids. The flowers are very large and borne in panicles of immense size.

Mrs. Jenkins. Tall. The best tall, early white for massing.

Pantheon. Bright carmine-red; very effective.

R. P. Struthers. Tall. Carminc-red eye; fine.

Rynstrom. Tall. Deep salmon-pink, not unlike Paul Neyron Rose, very fine for massing.

Slemb. Tall. Large flower, pale rose mauve with claré-red eye.

Slemb. Tall. Vermillion-red, overlaid with orange-scarlet; crimson-carmine eye.

Von Hochberg. Richest crimson-purple. Velvety. Medium. A light reddish violet, with very large white center which is overlaid and rimmed with carmine.

W. C. Egan. One of the largest flowered varieties in cultivation, color effect a delicate, soft pink.

Phlox Subulata, Moss or Mountain Pink.

Dwarf variety, entirely distinct. See description, page 93.

A single head of Hardy Phlox.

Pot Grown Roses.

These Roses are for planting in May or June when it is too late to set out the dormant stock offered on pages 102 and 103. The pot grown bushes are well started and in leaf when shipped, but are not usually much checked by being transplanted. These plants are all sent out in paper pots so the roots are protected by the soil and are not disturbed.

Thus the gardener, who for any reason is late in starting his garden, is enabled to plant Roses almost up to the beginning of Summer.

Dwarf Hardy Roses. Strong pot grown bushes shipped with soil, in paper pots. Each, 50c; doz., $5.00. Ideal hardy white Rose, of perfect form. Ideal hardy white Rose, of perfect form. Ideal hardy white Rose, of perfect form.

Hermosa. Soft deep pink, cup-shaped flowers.

Jonkheer Mock. Fiery-red within and silvery-white without.

La France. Silvery rose; large, symmetrical and very fragrant.

Madame Plantier. Pure white, large and double.

Magn Chantil. Bright pink, suffused crimson.

Mrs. John Laing. Pale pink, very free blooming.

Paul Neyron. Deep rose; of enormous size.

Paul Kruger. Beautiful pink, full and showy.

Persian Yellow. Deep golden-yellow, semi-double.

Baby Rambler Roses in Pots.

Baby Dorothy. A prolific bloomer, pale pink clusters. Each, 50c.

Hardy Climbing Roses in Pots.

Crimson Rambler. Bears splendid trusses of bright crimson flowers. Hardy and a strong grower. Each, 50c.

Dorothy Perkins. Bears large shell-pink clusters. Each, 50c.

Lady Gay. Cherry-pink, fading to soft white. Each, 75c.

See pages 102 and 103 for complete list of Roses.
German Iris

The German Iris or Fleur-de-Lis are among the most desirable, hardiest and easiest grown of our Spring-flowering plants. To this class belong the old-fashioned "flags" which have been so much improved in recent years that one can hardly recognize the older forms of the parents in some of the beautiful, newer varieties. The freest blooming of the Iris family, splendid for beds, borders or in front of shrubbery but always most effective in masses of separate colors. Plant in a dry, sunny location in April or May, setting the roots quite shallow.

S. Standards. F. Falls.

If by mail, add 5¢ each, extra.

Charles Dickens. S. Light violet. F. Indigo, white at base; late, 3 ft. Each, 20¢; doz., $1.00.

Edith. S. Porcelain blue. F. Velvety blue, veined white; medium, 27 inches. Each, 15¢; doz., $1.50.

Flavescens. Creamy-white; late, 30 inches. Each, 15¢; doz., $1.50.

Florentina Alba. Porcelain changing to white. Splendid fragrant flower; very early, 30 inches. Each, 15¢; doz., $1.50.

Florentina. Blue. One of the old favorites; medium, 24 inches. Each, 15¢; doz., $1.50.

Herant. S. Bluish-lilac with blue edging. F. Lavender; medium, 30 in. Each, 15¢; doz., $1.50.

Khedive. The shade of lavender; medium, 30 inches. Each, 15¢; doz., $1.50.

Mme. Chereau. White, edges of petals penciled azure blue; medium, 3 to 4 ft., strong stems. Each, 15¢; doz., $1.50.

Margolin. S. Light, clear yellow. F. Yellow, interlaced magenta; medium, 30 inches. Each, 15¢; doz., $1.50.

Marmora. S. Grayish lavender. F. Violet, richly veined; medium, 30 inches. Each, 15¢; doz., $1.50.

Nymph. S. Pale lavender. F. Purple, veined white; medium, 30 inches. Each, 15¢; doz., $1.50.

Queen of May. Rosy-lilac, almost pink, very fine; early, 30 in. Each, 15¢; doz., $1.50.

Stenophylla. S. Lilac. F. Violet, very fragrant; medium, 24 in. Each, 15¢; doz., $1.50.

Iris Pumila.

Very pretty, dwarf variety of German Iris, growing about 6 inches high, very free blooming, sweet scented. These bloom about two weeks before the German Iris. Useful for edging. Lilac-purple flowers. Each, 15¢; doz., $1.50. If by mail 5¢ each, extra.
German Iris.

Twelve Peerless Iris.

S. Standards. F. Falls. If wanted by mail, add 5c each, extra.

Albatross. S. White, shaded pale-blue. F. White tipped with purple; medium, 20 in. Each, 50c.

Fairly. S. Nearly white. F. White, charmingly veined. Peach blossom color; medium, 30 in. Each, 50c.

Innocenza. Ivory white; medium, 24 in. Each, 50c.

King of Iris. S. Fawn yellow. F. Velvety crimson. One of the most beautiful of all; medium, 24 in. Each, 50c.

Loreley. S. Light yellow. F. Ultramarine blue. A fine new variety; medium, 24 in. Each, 50c.

Mrs. Neubronner. Very deep golden-yellow; medium, 26 in. Each, 50c.

Perfection. S. Blue. F. Dark velvety-purple with charming reflex. A fine, impelling flower; medium, 30 in. Each, 50c.

Princess Victoria Louise. S. Pure sulphur-yellow. F. Rich plum with cream colored edges; medium, 39 in. Each, 50c.

Peerless Collection. Special offer, one of each of the Peerless varieties—12 in all, by express at purchaser's expense, $5.00, or sent prepaid to any part of the U. S. for $8.50.

Rainbow Collection. Special offer, one of each of the 16 tall varieties offered on the opposite page, and the four Siberian Iris offered below, 20 in all, by express at purchaser's expense, $8.00, or sent prepaid to any part of the U. S. for $15.00.

Siberian Iris.

Siberian Blue Iris. A flower of remarkable hardiness, intense purplish blue, blending richly with other colors. Each, 15c; doz., $1.50.

Iris Siberica Orientalis—"Yale Blue." Distinct, free-growing, variety, very large for its class. It produces a mass of deep blue flowers from June to August, 3 feet. Each, 15c; doz., $1.50.

Distinction. Beautiful blue flower sprinkled with white; 34 inches. Each, 20c; doz., $2.00.

Orientalis Gigantea or Gold Banded Iris. Handsome foliage. Flowers ivory-white with orange-yellow blotch at base of falls; late, 4 feet. Each, 25c; doz., $2.50.

Japanese Iris. (Kaempferi.)

A bed of these Iris once established is a "joy forever," the enormous flowers often ten inches across are strong growers and make a striking display. They begin to bloom in June and continue many weeks. All of them are beautiful. They thrive best in a moist situation, but if planted in ordinary garden soil should be frequently watered in dry weather. They should have a partially shaded location; protected from the strong mid-day sun, for example on the north or west side of the house.

No. 3. Kumo-no-obi, lavender, shaded white, very full center.

No. 5. Koyodai, dark purple, with light center, very double.

No. 10. Naka-bu, pink and white, shaded pale, 6 petals.

No. 15. Ugi-no-sato, rare shade of French gray, bronze center.

No. 16. Okubari, white with blue stripes, center purplish.

No. 19. Gosei-ko-nosai, violet blue, veined white, with double center.

No. 20. Shira-take, white with gold center, 6 wavy petals.

No. 22. Datedogu, deep rose, shaded white center, 3 petals.

No. 23. Sofu-no-kou, lavender, white and gold center.

No. 24. Kurokumo, rich bluish purple, gold center.

No. 25. Idzumigawa, white, shaded lavender, delicate blue veins.

In ordering please give names of varieties wanted.

A Suggestion. No garden is complete without Iris, Peonies and Phlox. They are easy to grow and under favorable conditions will live for years. The first cost is very moderate. See pages 93 and 94.

Favorite Perennial Collection. Six Phlox Roots, 6 Iris Roots, 3 Peony Roots—8 all different standard varieties—our selection for $2.50 by express at purchaser's expense or sent prepaid to any part of the United States for $3.50.
Northrup, King & Co., Seedsmen, Minneapolis, Minn.

Superb Peonies

Hardy as the Oak—Once Planted All Is Done Increasing In Size and Beauty With Age.

The Peony is a native of Siberia which undoubtedly accounts for its great vigor and hardiness. The ideal flower for the great Northwest, since it endures the most intense cold without injury.

Set the roots slanting 3 to 4 feet apart each way, with the topmost bulbs 4 inches below the surface. They will generously repay good care; keep the soil loose and free from weeds but use manure sparingly and only after the ground is frozen. A few handfuls of bone meal worked around the crowns will greatly improve the blooms. Peonies do best in a sunny location and should be left undisturbed for years.

The varieties offered below include a complete range of form and color, all desirable sorts. They are for delivery from March to May but can also be supplied from September to November.

Each, $3.00; Dozen, $20.00. By Express Only at Purchaser's Expense. Dozen 100.

- White and Light Shades.
  - Festiva Maxima. Large white, very fine. 50c
  - Grandiflora Nieve. Early white, center cream. 35c
  - La Tulipe. Blush white, outer petals striped red. 75c
  - Queen Victoria. Large white, good cut flower. 35c

- Red and Crimson Shades.
  - Andre Laurian. Very red, fragrant, late. 25c
  - Baroness Rothschild. Very fine, purplish-lilac. 25c
  - Charles Verdier. Large lilac-carmine bloom. 35c
  - Delachei. Deep crimson-purple, very large. 50c
  - Francis Origet. Brilliant crimson, full double. 35c
  - La Sublime. Very fine, floriferous, crimson. 80c
  - Marechal Vaillant. Large, deep red, very late. 50c
  - Plenarius. Very fine, glistening crimson. 50c
  - Rubra Triumphans. Very large, bright crimson. 50c

- Pink and Rose Shades.
  - Alexander Dumas. Fine light pink. 50c
  - Deuech d'Orelans. Carmine pink. 25c
  - Edulis Superba. Rose pink, very early, fragrant. 35c
  - Floral Treasure. Bright light pink. 35c
  - Grand Flora Rosea. Beautiful dark pink. 35c
  - Hurmel. Immense, crimson on center, pink. 25c
  - La Coquette. Large pink, center shaded deeper. 75c
  - Lady Leonora Bramwell. Soft pink; very fine. 50c
  - Louis Van Houttei. Deep crimson-rose, tipped silver. 35c
  - Madame Ferrand. Beautiful deep pink. 35c
  - Madame Lebon. Bright cherry pink, silvery reflex. 50c
  - Pompomia. Light pink, tall, vigorous. 25c
  - Queen Victoria. Pink, very fine cut flower. 25c

All the above prices are by express at purchaser's expense. If wanted by mail add 10c each for postage.

Peonies for Hedges and Massing.

By Express Only at Purchaser's Expense. Dozen 100.

- Double White, unnamed. Each, 25c $1.00 $20.00.
- Double Pink, unnamed. Each, 25c $2.00 $15.00.
- Double Red, unnamed. Each, 25c $2.00 $15.00.
- Double Rose, unnamed. Each, 25c $2.00 $15.00.

Six at dozen rate: 25 at 100 rate.

Special Offer. One of each of the above 26 named varieties for $10.00, by express at purchaser's expense. If wanted by mail add for postage on 10 lbs.

Surprise Collection. One each of 12 choice varieties, our selection, for $4.00, by express at purchaser's expense; or postpaid for $4.50.

A Peony hedge row makes a gorgeous June display. The upper photograph shows a head of Festiva Maxima.
Northrup, King & Co.'s
Minnetonka Collection of Ten Double Peonies.

For Size, Shape, Color and Richness, These Varieties Stand Alone—Beauties par Excellence!

If by mail, add 10c each, extra.

Albert Crousse.
Very large, compact globe. Fragrant and a free bloomer. Each, $1.50.

Baronne Schröeder.
One of the finest, flesh-white changing rapidly to purest white—very lovely. Each, $2.50.

Felix Crousse.
Large,紧凑的大球。非常芳香，且为自由花。Each, $2.50.

Golden Harvest.
Guard petals lilac-rose, center creamy-white with many wide petals of a peach-blossom pink. Each, 75c.

Madame Ducel.
A large globular flower with a frill of guard petals, silvery-pink in color. Strong grower, medium height, midseason, very free blooming. Each, $1.00.

Madame de Verneville.
Large and very full. Pure white, center blush when first open, fading to pure white with a touch of carmine. Medium height, extra-free bloomer, early. Each, 5c.

Madame Emilie Galle.
Large, compact rose type. Deep lilac-white with creamy-white center. Medium height, strong, free bloomer, late. An attractive variety of the most delicate coloring. Each, $1.00.

Milton Hill.
Often called "the finest Peony in existence." Very large, globular form, of compact rose type. Each, 3c.

Mons. Jules Elie.
Immense globular, very full flower; broad, overlapping petals; glossy shell-pink with silvery reflex on whole bloom. This pink Peony most nearly approaches perfection. Each, $1.50.

Princess Beatrice.
Pink guard petals, with a collar of yellow. Large rose tuft in center. Free bloomer and a striking flower, early. Each, $1.75.

Minnetonka Collection.
One of each of the ten Peonies described above, $12.50; by express at purchaser's expense, or sent prepaid for $15.00.

Single Peonies.

Single Peonies appeal more to some people than do the Double varieties. The cushions of pure gold stamens set off the delicate tints of the surrounding petals to great advantage and the general effect of the pink sorts is that of immense single Roses. They flower before the Double varieties.

Hermes.
Clear rosy-pink; of good form, makes a splendid border. The buds are especially attractive. Each, 35c; postpaid, 45c.

Queen.
Large, lilac-white. Strong, of medium height and a free bloomer. Early and fragrant, a very desirable single white. Each, 45c; postpaid, 50c.

Wild Rose.
Fine open-faced crimson flower, with rich golden center. Each, 35c; postpaid, 45c.

Stylish Peony Collection.
One of each of the three single Peonies described above for $1.00, or sent prepaid for $1.25.

Old-fashioned Peonies.
The old-fashioned Peony of our grandmothers' time. These varieties bloom two weeks earlier than the sorts offered above. Strong growers with large, full, double flowers and very fragrant.

Anemone rubra. Anemone shaped flowers of a beautiful brilliant red color. Each, 30c.

Arrabona plena. Dark red, full flowers. Each, 50c.

Baptisia. Light rose, changing to white. Each, 35c.

Rosa plena. Rose. Each, 35c.

Tenuifolia. Single, dark red, cut leafed. Each, 90c.

Tenuifolia flore pleno. Dark red, double, cut leafed. Each, 40c.

If wanted by mail, add 10c each, extra.

Peony Manual, by Harrison, 25c, postpaid.

VEGETABLE PLANTS AND ROOTS.

All of our Vegetable Plants are hardy and carefully transplanted stock and must not be confused with the regular bed plants, which will endure less shipping and will not produce such strong, healthy plants as the transplanted stock.

Packing charges are included in the prices given, but purchaser must pay transportation in every instance, except as noted. Plants of all kinds should invariably be sent by express, as they will arrive at destination in less time than if sent by freight and will also be given better care in transit. On all orders for Vegetable Plants amounting to less than $1.00 add 15c to cover packing charges.

Asparagus Roots. See page 20. 1900, $8.00; 1910, $1.00.

Cabbage Plants. Delivery April 15th to June 1st. Ready about April 15th. Early Jersey Wakefield, Early Summer, Succession, Holland, Washington, Boston, Royal, and Extra Early. 100, $8.00; 1910, $1.50; doz., 25c (postpaid, 30c).

Cauliflower Plants. Ready in April and May. Northrup, King & Co.'s Model and Snow Ball. 100, $10.00; 100, $1.50; doz., 25c (postpaid, 30c).

Celery Plants. Delivery May and June. Golden Heart, White Flamingo, Golden Self Blanched. 100, $8.00; 1910, $1.50; 25c, $1.15; 100, $1.00; doz., 15c (postpaid, 20c).

Chives. Ready April 25th. Doz., bunches, $1.00; each bunch, 1c.

Egg Plant. Ready in May and early June. Northrup, King & Co.'s Improved New York Spineless. Doz., 50c each, 5c.

Garlic. See page 46. Per lb., 30c.

Ground Cherry, or Golden Hawk Tomato. Ready May 15th.

Horse Radish Roots, Common. Two year old strong roots. 1900, $6.00; 1910, 75c doz., 15c (postpaid, 30c).

Horse Radish Roots, New Bohemian or Malvern King. Root cuttings planted in April should produce fine large roots in October, five months from planting. White as snow, free from disease. 1900, $8.00; 1910, $1.00; doz., 25c (postpaid, 30c).

Onion Sets. All varieties. See page 88. Yellow Bottom Sets, 15c per lb.; Red Bottom Sets, 25c per lb.; White Bottom Sets, 30c per lb.

Pepper. Ready by June 1st. Ruby King, Large Red Cayenne and Large Bell or Bull Nose. 100, $2.00; doz., 30c.

Rhubarb Roots. See page 62. Each, 25c; doz., 50c.

Sage. Doz., $1.00 each, 10c.

Spinach Roots. Doz., $1.00 each, 10c.

Sweet Potato. Ready by May 20th. Yellow Jersey and Red Jersey. 1900, $8.00; 1910, $1.50; 100, $1.00; doz., 25c (postpaid, 30c).

Tomato Plants. We make a specialty of hardy grown, transplanted Tomato plants. Delivery in May and early June. Early Minnesota, Artisana, Northrup, King & Co.'s Sterling, John Bar, Dwarf Champion, Beauty Perfection, Golden Queen, Yellow Pear, Red Pear. 100, $8.00; 1910, $1.50; 25c, $2.50; 100, $1.00; doz., 50c (postpaid, 30c).

Hot Beds. See page 18.

Throughout the Northwest we recommend starting Hot Beds about March 16th, and at intervals up to April 15th. By their use you can raise your own vegetable and bedding plants from seed.

FLOWERING PLANTS

For Bedding, Window Boxes and Vases.

Packing charges are included in prices given, but purchaser must pay transportation in every instance. Plants of all kinds should invariably be sent by express, as they will arrive at destination in less time than if sent by freight and will also be given better care in transit. These plants are for delivery from May 15th to June 15th. The last week in May and first week in June is the ideal time.

GERANIUMS.

Out of $1.50 or 4 inch pots.

This should not be confused with lower priced stock which has been forced in a hot-house transplanted condition.

We furnish well grown Geraniums that have been hardened off in a cool greenhouse. They are splendid for setting out about Memorial Day.

Each.

Alphonse Ricard. Semi-double, vermillion scarlet. $0.20 $2.00 $15.00

Beau Poilpin. Semi-double salmon. 2.00 15.00

Jean Vlaud. Semi-double rose-pink. 2.00 15.00

Rene Buchner. Double snow white. 2.00 15.00

S. A. Nutt. Double deep scarlet. 2.00 15.00

MIXED GERANIUMS.

All Colors.

First Size. Selected. 2.00 15.00

Large Flowering Cannas.

Should be planted about Memorial Day. For descriptions see page 101.

Firebird. Clear dazzling red. $8.00 $35.00

Duke of Marlborough. Rich crimson. 2.00 15.00

Feuerfeder. Very scarlet, very free blooming. 2.00 15.00

D. B. Eischeid. Brilliant vermillion scarlet. 2.00 15.00

Julius Koch. Splendid blood red. 2.00 15.00

Louisiana. EXTRA strong grower, scarlet. 2.00 15.00

Philadelphia. Glowing red. 2.00 15.00

King Humbert. Orange scarlet; bronze foliage. 2.00 15.00

Pennsylvania. Vermillion scarlet, overlaid with orange. 2.00 15.00

General Mills. Scarlet, suffused with orange. 2.00 15.00

Maddie Grozy. Brilliant vermillion, gift edge. 2.00 15.00

Gladiator. Rich yellow, deep orange, 2.00 15.00

Gustav Gumpper. Clear golden yellow. 2.00 15.00

L. Va. 1500. 2.00 15.00

Mixed Cannas. 15.00 12.00

BEDDING PLANTS.

For Terms and Delivery see above.

Achyrantes. Red, green and variegated. $0.50 $7.75 $60.00

Ageratum. 2.00 15.00

Alternanthera. Red and green. 2.00 15.00

Allysum. 3 inch pots. 1.50 15.00

Asters. Mixed colors. 1.00 7.00

Begonia. Vermilion, border, 3 inch pots. 1.00 7.00

Begonia, Rex. 1.50 12.00

Carnations. Marguerite. 2.50 20.00

Cascadia. 5.00 40.00

Cobaea Scandens. Blue or white. 2.50 20.00

Copa, sweet, green and variegated. 2.00 15.00

Dahlias, Undivided field roots. 2.50 20.00

Daisy, English. Mixed. 2.00 15.00

Daisy, Marguerite. 1.50 12.00

Daisy, Mrs. Sander. 1.00 7.50

Dahlias, Shasta. 2.50 20.00

Dra euna Indiva. 15.00 120.00

Dutcher Mix. 2.50 20.00

Gladiolus. See page 116.

Echeveria. Old Hen and Chickens. 1.00 7.00

Fenn, Ampereas Plumosus. 3 inch pots. 2.00 15.00

Fenn, Ampereas Sprengeri. 3 inch pots. 2.00 15.00

Fenn, Boston. 35.00 200.00

Fenn, Small in pots. 1.00 7.50

Feverfew. Double pure white flowering. 2.00 15.00

Hanging Baskets, Artifically filled with ferns and Summer Plants. 3.00 to 5.00

Heliocereus. 3 inch pots. 1.00 7.50

Hollyhocks. Mixed colors. 2.50 15.00

Hydrangea. (Page 94). French varieties double roots. 1.50 7.50

Ivy, English in pots. 3.50 25.00

Lobelia. In pots. 3.50 25.00

Penstems. Mixed colors. 2.50 15.00

Pelargonias. Single and Double. 1.50 12.00

Phlox, Hardy (page 95). 2.00 15.00

Roses. (Page 22). Dwarf Hardy varieties in pots. 75.00 500.00

Roses. Ramblers, in pots. 75.00 500.00

Salvia. In 2 1/2 inch pots. 1.75 15.00

Salvia. In 3 1/2 inch pots. 1.75 15.00

Verbena. 1.00 7.50

Vincas Minor. Green Trailing Myrtle. 2.50 20.00

Vincas, Green leaves. 2.50 20.00

Vincas. Variegated leaves. 2.50 20.00

Northrup, King & Co.'s Large Flowering Cannas.

The varieties of Cannas which we offer are particularly adapted to the Northwest and are sure to give satisfaction. The plants are hardy grown—the roots being started in a cool greenhouse in January and the plants grown slowly, until they are large enough to go into 3/4 or 1/2 inch pots.

Very effective for bedding on the lawn, and equally good when grown as pot plants in the house or conservatory. They commence blooming soon after being planted out and flower profusely until stopped by frost. They require a deep soil, enriched with well rotted manure and bone meal. Mulch with hay or grass clippings and water freely. Our list embraces the best of the novelties and old standard varieties. Delivered from May 10th to June 15th, strong plants from 4-inch pots, which will commence to bloom in a short time.

Price. All Cannas except Firebird and Mixed varieties, each, 20c; doz., $2.00; 100, $13.00, by express only at purchaser’s expense. Six at doz. rate, 25 or 50 at 100 rate.

Canna Firebird. This is by all means the very best red-flowering Canna, Messrs. Feuermeer’s fine red. The flowers are borne in immense trusses, on strong stalks well above the leaves. They are of splendid form, round and shapely. The petals measure 3-1/2 inches and more across. The color is a vivid glowing scarlet without any streaks, spots or blotches. Firebird has been very much admired wherever exhibited. At the Minneapolis Flower Show, visitors stopped instantly when they perceived the dazzling red blossoms. The color, so pure and clear, is really fascinating; a self color not hitherto seen in Cannas. Each, 50c; doz., $5.00.

Red Flowering, Green Foliage Cannas.

Duke of Marlborough. Flowers rich, velvety crimson, fine, shapely flowers in large, full trusses. Height, 4 feet.

Feuermeer. Brilliant, fiery-scarlet, exceptionally free flowering, fine for masses. Height, 4 feet.

J. D. Eisle. Brilliant vermilion scarlet, very striking. A fine bedder. Height, 3 feet.

Julius Koch. Flowers composed of four, broad, well rounded, large petals which are of the most brilliant, blood red. A very beautiful variety. Height, 3 feet.

Louisiana. A strong, vigorous variety, producing a dense mass of glossy, green foliage and vivid scarlet flowers, often measuring 7 inches across. Height, 5 feet.

Philadelphia. Brilliant glowing red, very rich and velvety. Height, 3 feet.

Red Flowering, Bronze Leaved.

King Humbert. Gigantic trusses of orange-scarlet flowers with bright red marbling make a splendid contrast with the dark, bronze foliage. The flowers are 6 inches in diameter and of very fine shape, typical of the orchid flowering class. Height, 3 feet.

Orange Shaded, Green Foliage.

Red Flowering, Gold-Edged Cannas.

General Merkel. Scarlet suffused with orange, base and edge of flower marbled golden yellow. Height, 4 feet.

Madame Crozy. Flowers brilliant vermilion scarlet with narrow gilt edge, a very popular variety. Foliage bright green. Height, 3-1/2 feet.

Yellow Flowering, Green Foliage.

Gladiator. One of the finest bedders, the color is a deep yellow, freely dotted with red. Height, 4-1/2 feet.

Gustav Gumper. The ideal, rich yellow, bedding Canna. The large flowers are borne well above the foliage, its habit of growth is neat and uniform. The color supplies a shade which has hitherto been missing, a clear golden yellow. Height, 3-1/2 to 4 feet.

Pink Flowering, Green Foliage.

L. Patry. Flowers of delicate rose pink, standing well above the handsome, green foliage. Height, 4-1/2 feet.

Mixed Cannas For Bedding.

A mixture of the finest dwarf, large flowering kinds, which will go well together, and make a magnificent bed or border of bright colors. We can thoroughly recommend this mixture. We do not care to plant out any Cannas on our own grounds and we therefore, make this special offer to close out our stock for delivery June 1st to 10th. Each, 5c; doz., $1.75; 100, $12.00; six at doz. rate, 25 at 100 rate.

Circular Beds. Arrange Cannas thus. In center 1 plant: 1st circle, 6 plants, 2nd circle, 12 plants, 3rd circle, 18 plants, 4th circle, 24 plants, each circle taking 6 more, plants to be set 18 inches apart.

Fall and Winter Treatment. Do not lift plants until after a sharp frost, then take up as much soil as possible, being careful not to break or damage the roots. Cut off half the tops and store in shed or cellar. When the remaining foliage becomes perfectly dry it may be cut off to a height of 3 inches, then the roots, still with the dirt on them, should be stored where the temperature will be from 40 to 45 degrees. The roots should never be allowed to freeze nor entirely dry up. The roots may be placed on a rack or even on a dry cellar floor. Cover with a layer of straw to hold the moisture. In January or February clean the roots, divide up into pieces with 3or 4 eyes each and start in flats or pots in house or conservatory.

We do not advise planting Cannas or other bedding plants outdoors, in this latitude, much before Memorial Day.
ROSES—Dormant Plants.

DWARF HARDY HYBRID PERPETUALS.

FOR POT GROWN ROSES see page 95.

We offer strong, two-year-old field grown plants, which under ordinary conditions should produce satisfactory flowering results for the first season. Each, 40c; doz., $4.00; 100, $30.00. One of each of the twenty-one favorites for $6.25. By express only.

HYBRID TEA ROSES.

Semi-hardy, require protection during the Winter in this latitude. Strong two-year-old field grown stock. Each, 3c; doz., $3.30. One of each of six varieties for $1.75.

Clothilde Soubert. A fine variety for bedding or pot culture; enormous size and very double; white shading to deep pink at center; a profuse bloomer and strong grower; fragrant.

Dorothea de France. A brilliant shade of clear crimson velvet, centering to vivid cerise; large flowers on long, stiff stems, vigorous, free blooming.

Killarney. Brilliant scarlet-crimson of a most brilliant hue; long pointed buds and striking flowers on tall, erect stems; a rapid grower and constant producer. White Killarney. A pure white sport from the pink Killarney.

Frau Karl Druschi, the ideal white Rose.

HARDY CLIMBING OR PILLAR ROSES.

The following varieties are very desirable for training over arbors, trellises and verandas; also valuable as screens for unsightly objects, as buildings, fences, walls, etc. All of the Rambler Roses are strong, vigorous and perfectly hardy. See page 95 for Pot Grown Roses. Extra strong two-year-old stock; each, 90c; 10, $4.50; by express only at buyer's expense.

Baltimore Belle. Pale blush, variegated carmine, rose and white; flowers in beautiful clusters, the whole plant appearing a perfect mass of bloom. Crimson Rambler. Since the introduction of this wonderful variety, climbing Roses have gained in popularity every season. This variety commands the admiration of all, by its gorgeous flowers; each cluster a bouquet in itself.

Dorothy Perkins. A beautiful companion to the Crimson Rambler; color, a handsome shell-pink, which holds a long time without fading. The flowers are borne in clusters of from ten to thirty and are very double. The buds are also remarkably beautiful. Very hardy and vigorous with deep green foliage. Debutante. Light pink, passing to white; double blooms in clusters, with delicate perfume; dark, glossy foliage.

Hiawatha. Glowing ruby-crimson, with a clear white eye; single flowers in clusters; light glossy-green foliage.

Lady Gay. Cherry-pink, fading to soft white. The flowers, in large, loose clusters, together with the bud and foliage, form a mass of beauty from base of vine to tips of branches. See illustration on page 109.

Minnehaha. Similar to Dorothy Perkins, but paler in color.

Prairie Queen. Bright, rosy red freckled with white stripes. Foliage large and quite deeply serrated. Blooms in clusters; one of the finest.

Sweetheart. Buds of bright pink, shading to soft white in the full blooms; very double and fragrant.

Wichuriana. A low-trailing species suitable for covering porches or rough ground; producing single flowers in profusion after the first season is past. The stems creep on the earth almost as close as Ivy. A distinct and valuable variety from Japan. Pure white.

Wichuriana Rubra. Same as above except flowers are bright red tinted orange-red.

All roses, 6 at dozen rate; 25 at 100 rate.

Pruning and Planting.

We advise pruning Roses early in the Spring. Pruning should be done while the plants are dormant, and before the sap begins to flow. The chief reason for pruning are to encourage the formation of a symmetrical plant and also more flower buds. Plants of delicate habit and weak growth require severe pruning; plants of vigorous growth should have the shoots only moderately shortened, but the branches well thinned out. If strong growing plants are closely pruned, a great growth follows with very few flowers. Hardy Hybrid Perpetuals require a second pruning to promote the formation of flower buds later in the season.

We recommend the best and safest season to plant in all the Northwestern States: see Pot Grown Roses, page 95 for late planting.
ROSES—Dormant Plants.

HARDY MOSS ROSES.

Price, Each, 40c; doz., $4.00. By express at purchaser's expense. Strong, vigorous and perfectly hardy. Prefer rich ground.

Blanche Moreau. Flowers are produced in clusters, and are large, full and sweet; color is pure white, both flowers and buds have an abundance of lovely deep green moss.

Crested. Pink, finely crested, very distinct from all others.

Madame Moreau. Red. A desirable variety.

William Lobb. Carmine, bright. Deserves a place in your garden.

HARDY SUMMER ROSES.

Austrian Copper. Single flower, brilliant coppery red. Each, 50c.

Madame Plantier. Pure white, large and double; a free and continuous bloom. Used extensively for cemetery planting. Each, 5c.

Persian Yellow. An old favorite, very free flowering, deep golden yellow, semi-double. Each, 5c.

Rosa Rugosa Red. A valuable hardy Rose, forming vigorous bushes four to six feet in height. Thrives everywhere and blossoms throughout the Summer. Attractive in Autumn because of its large, brilliant red seed pods. Flowers, rosy crimson. Each, 5c.

Rosa Rugosa Alba. Same as above except flowers are pure white. Each, 5c.

MONTHLY ROSES.

Not hardy outdoors in the North. Suitable for pot culture. Each, 5c; doz., $3.50; by express at purchaser’s expense.

Duchez. Pure white. Long bud of good form and very vigorous.

Fellemberg. Rose. Strong grower.

Hermosa. Rose. Cup-shaped, finely formed and full flowers of soft, deep pink, everblooming and beautiful.

For Pot Grown Roses, see page 95. All Roses offered on this and the opposite page are dormant stock and cannot be shipped after the leaf buds start. They should be planted in April or early May.

Our Roses are ready in April. Please send your orders early.

BABY RAMBLER ROSES.

This charming class of Roses is the sensation of the last few years. They represent the triumph of productive effort among Rose growers in bringing the vivid colors, prodigal freedom and beautiful clustering form of the grand outdoor Rambler Roses into the house for Winter decoration.

Baby Rambler (Madame Norbert Levavasseur). The Crimson Rambler in dwarf form, with the same clear, brilliant, ruby-red color. Hardy and healthy everywhere, attaining a height of twenty inches, and blooming in profuse clusters until frost, and throughout the Winter if taken indoors. Each, 5c; doz., $3.00.

Baby Dorothy (Maman Levavasseur). A prolific producer of pure pink flowers, with all the good qualities of Crimson Baby Rambler. Each, 5c.

Jessie. A clear, glowing red. Of vigorous, erect growth and very free flowering. Each, 5c.

Mrs. W. H. Cutbush. A new baby Rose of an entirely distinct color, light pink. The flowers are borne in huge clusters throughout the entire Summer and Autumn and completely cover the entire plant. Each, 5c.

Baby Rambler Tree Rose. Grafted on 12 to 18 inch stems. Very desirable for pot culture on porches or pillars. Each, 5c.

SOIL AND FERTILIZER FOR ROSES.

Best results are obtained when Roses are planted where they will have full sunlight; even in a slightly shaded place they never do so well. Prepare the soil to a depth of at least a foot, and thoroughly mix with not less than two inches of well-rotted stable manure; or if unobtainable, bone meal should be put on at the rate of 10 lbs. to every 100 square feet of surface; this should be thoroughly mixed in the soil to the depth of the bed.

Fertilizers for Roses on pages 161 and 163.

INSECTS AFFECTING ROSES.

Green Fly. (Aphis). Colours of these attack the young growth and stunt the juice of the plant. Spray with tobacco solution or dust with tobacco powder after wetting the plants. nicotine fume is especially effective.

Rose Slugs. A light green worm that eats the leaves. Apply fish-oil soap. 1 lb. dissolved in 8 gallons of water; Paris Green, 1 oz. to 10 gallons of water or arsenate of lead. Mildew. This greyish-white film on the affected leaves can be controlled by spraying with Bordeaux Mixture, 1 pint in 6 to 8 gallons of water.

Insecticides for Roses on page 187.
The Species or Lancifolium varieties form the most popular class of Japanese Lilies, their hardiness, free growth and branching habit rendering them most valuable for permanent beds and borders. They grow from 3 to 4 feet in height and continue in bloom from August until frost. Plant in rich, well-drained soil, with a handful of sand under each bulb.

**Lilium Auratum.** The beautiful gold banded Lily of Japan and one of the grandest plants in cultivation. No species ever had so much general favor. A bed of 100 Auratums will produce flowers for a longer time than any equal number of any other of the Lily species. The flowers which are often ten inches across are thickly studded with yellow and crimson spots, while in the center of each petal there is a golden band fading at its edges into the white. Bulbs should be planted as soon as the frost is out of the ground, the earlier the better. Plant in fine, rich, well-drained soil. Bulbs, each, 15c; doz., $1.50. If wanted by mail add 5c each, extra.

**Lilium Canadense.** Wild Yellow Lily. Flowers vary in color—red and yellow. Grows 2 to 5 feet high, and is a most hardy species. Nice to plant among shrubbery, and does quite well in shade. June and July. Each, 15c; doz., $1.50.

**Lilium Elegans.** Incomparable. Perfectly hardy, succeeds most everywhere; flowers large and showy, pale scarlet. Bulbs, each, 15c; doz., $1.50.

**Lilium Longiflorum.** Pure white, trumpet-shaped, flowers in June or July, very hardy. Can also be grown as a pot plant. Bulbs, each, 25c; doz., $2.50.

**Lilium Speciosum Rubrum.** Pure white flowers with a greenish band through the center of each petal. They are of great substance and very fragrant. One of the best for general culture. Bulbs, each, 35c; doz., $3.50. If wanted by mail add 5c each, extra.

**Lilium Speciosum Melpomene.** Words cannot describe the beauty of this variety. Frosted white, spotted, clouded and bordered with pinkish crimson. Petals deeply recurved and widely bordered. Each, 35c; doz., $3.50. If wanted by mail add 5c each, extra.

**Lilium Speciosum Rubrum or Roseum.** No words can everate the brilliant beauty of these famous Japanese Lilies. The six broad white or pink petals are thickly dotted with rose or crimson spots, while the graceful form and brilliant color make them very effective and desirable. Especially hardy. Each, 35c; doz., $3.50. By mail, 5c each, extra.

**Lilium Superbum.** American Turk's Cap. Often attains a height of 6 feet, and produces a large number of flowers which are bright orange in color, with dark spots. Each, 15c; doz., $1.50.

**Lilium Tenuifolium.** Siberian Coral Lily. A great beauty. One to two feet high, with 10 to 15 or more nodding, rich scarlet flowers. Turk's cap shape. Each, 25c; dozen, $2.00.

**Lilium Tigrinum splendid.** (Single Tiger Lily.) Large flowers, color, orange salmon with dark spots. Bulbs, each, 15c; doz., $1.25.

**Lilium Tigrinum flore pleno.** Double Tiger Lily. Stately, bears clusters of large double red flowers, spotted black. Bulbs, each, 15c; dozen, $1.25.
STRAWBERRY PLANTS.

Our shipping season is from April 25th to May 15th, the best planting time for the Northwest. Please send your orders early.

Price postpaid, 25, 50c; 50c, 100c, $1.25. By express at buyer’s expense, 30c, 50c, 100c, $1.25 each. Discounts for orders of 50 dozen or more. At 50c per dozen, a kind at 100c rate, 25c at 25c rate.

We have aimed to include only those varieties which by actual test have proven the most reliable for this section. See note below under “Strawberry Culture” regarding perfect plants.

Bedredwood (perfect). One of the best for home use or market. Fruit large, bright scarlet, firm, and of fine quality. Early.

Crescent. One of the oldest and best, and a great yields under good culture.

Lovelt (perfect). A hardy variety, very firm berry of good color. Medium to late.

Sample (imperfect). A large, fine berry; a great yielder and a good shipper. Makes a large plant, roots deep.

Senator Dunlap (perfect). One of the best market berries, prolific and productive; bright glossy red, of first class quality. Midseason. Our leading variety for the Northwestern States.

Splendid (perfect). Large, handsome deep red, of fine quality.

Warfield (imperfect). Plant with Bedredwood for a fertilizer. An excellent sort, in appearance much like Senator Dunlap.

Everbearing Strawberries.

Everbearing Strawberries are now no longer an experiment as they are now being successfully grown in many parts of the country. There is a demand everywhere for them.

While these varieties will produce fruit at the same time as the ordinary strawberies and continue to bear until frost, it is best to keep the blossoms removed until July 15th, so as to conserve the strength of the plant for the early crop. Each, 25c, 50c, 100c, $1.25. At 25c rate, 25c at 30c rate.

Fruit postpaid, 25, 50c, 100, $1.50, by express at buyer’s expense.

Americus. Fruit light red, heart-shaped, of fine texture and good quality, seem strong so fruit is held off the ground. Plants are strong, healthy and deep coxons.

Progressive. A very strong grower, of medium size, very heat resistant. Both blossoms and fruit are well protected by heavy foliage. The berries are rich and sweet, a deep red inside and out, very palatable.

Superb. Berries are very large, regular in shape, glossy and attractive. The quality is extra fine.

Strawberry Culture. A rich, well-decayed loam soil, having plenty of available humus and plant food is best for strawberies. If necessary to enrich the soil just before planting, use only commercial fertilizer, well rotted compost or sheep manure, to avoid weed seeds.

Plants. Use only the best plants. Inferior ones or those that have fruited once do not pay to set out. Our strawberry plants are grown to produce satisfactory results. Varieties marked “imperfect” have imperfect flowers without pollen and must be interplanted with a perfect variety to pollinate them so they will bear well.

Planting Time. Planting from April 25th to May 15th is best for the Northwest.

Setting Plants. Upon arrival, dip roots into liquid mud and keep them moist, never expose to sunlight or wind. To six plants for the old matted row system, plant in rows 3 to 4 feet apart, 12 to 15 inches apart in row. Then runners are allowed to form dense beds or rows. A better way is to plant 2 feet apart each way; first trim ends of roots slightly, spread them out fan-shape and drop each plant into the space made by forcing a spade straight down into earth. Then work up the earth around plant and settle firmly, so crown is a trifle lower than the surface, but not covered. Water each plant weekly.

General Care. Pinch off blossoms the first year, keep beds weed free and mulch. Grill runners around parent plant like spokes of a wheel. Thus plants develop evenly and yield well. After ground freezes, cover with 4 to 6 inches of straw.

HARDY FERNS.

Our native ferns take as readily to cultivation as the common garden flowers. While flowers require a sunny place, ferns delight in some shaded nook inclined by buildings or trees. They can also be grown in boxes or pans on the porch, in the house or under trees, anywhere that is shaded; but are not suitable for house culture in Winter, for that time is too long. Each, 25c; 50c, 100c, $1.25. By express at buyer’s expense, 30c, 50c, 100c, $1.25 each.

1. Cinnamon Fern. Osmunda cinnamon. A large fern growing in a crown two to five feet high. Its golden brown fronds are broad and lance-shaped, curving gracefully outward. Easily cultivated and effective in shaded corners, but they also do fairly well in the most exposed sunlight.

2. Maidenhair Fern. Adiantum pedatum. The most graceful of all our native ferns and easily grown in rich, moist, shady places; one foot high. Plant an inch deep and about one foot apart for massing. Each, 30c; doz., $3.00; 100, $20.00.

4. Sensitive Fern. Onoclea sensibilis. Fronds one to two feet high, broadly triangular, deeply cut into wavy, toothed divisions. Grows in wet places, open or shade.

5. Silvery Spleenwort. Asplenium thelypteris. Two to three feet high, by six inches wide. Will grow in any good garden soil. Each, 20c; doz., $2.50; 100, $17.50.

6. Wood Fern. Aspladium spinulosum. The plant varies greatly in height, breadth and way of holding itself. Sometimes the fronds stand three feet high and are broad and spreading. Again they are tall, slender and somewhat erect. At its best it grows with almost tropic luxuriance and is a plant of rare beauty. Its fronds having a certain feathery aspect.

Hardy Fern Collection. One plant of each of the above varieties, 6 plants in all, sent prepaid to any part of the United States for $1.75.

Hard Ferns used in front of porch. Very effective in shady nooks.
Small Fruits.

Currants

WHITE CURRANTS

Two years old, No. 1 stock. Each, 25¢ (postpaid, 30¢); 10, $1.25; 100, $10.00; except where noted.

White Dutch. Bush large, vigorous; clusters very long; berries large, of medium size, translucent, slightly darker than White Grape; quality excellent.

WHITE CURRANTS

Two years old, No. 1 stock. Each, 25¢ (postpaid, 30¢): 10, $1.25; 100, $10.00; except where noted.

Cherry. Bush vigorous, compact; clusters rather long; berries large, of medium size, translucent, slightly darker than White Grape; quality excellent.

RED CURRANTS

Two years old, No. 1 stock. Each, 25¢ (postpaid, 30¢): 10, $1.25; 100, $10.00; except where noted.

Pay. Bush very vigorous, somewhat spreading; clusters long; berries large, of medium size, translucent, slightly darker than White Grape; quality excellent. One of the most productive of the large currants.

Pay. (Pay's Profiteer) Bush vigorous, somewhat spreading; clusters long; berries large, of medium size, translucent, slightly darker than White Grape; quality excellent. One of the most productive of the large currants.

Red Dutch. An old and well-known standard variety. Bush a strong, tall, upright grower; clusters average about three inches long; berries medium in size, dark red; sprightly sub-acid flavor. Productive.

Black Currants

Two years old, No. 1 stock. Each, 25¢ (postpaid, 30¢); 10, $2.00; 100, $15.00, except where noted.

Black Champion. Bush vigorous and productive; fruit averages above medium; pulp nearly sweet, mild-flavored.

GEO. R. WINSHIP

Two years old, No. 1 stock. Each, 25¢ (postpaid, 30¢); 10, $2.00; 100, $15.00, except where noted.

American varieties

Carrie. A very fine red, of vigorous growth and very prolific. Healthy and free from mildew. Hardy, fruit of good size and of excellent quality. A very promising sort, introduced by Mr. Wyman, Eliot of Minneapolis.

Downing. Bush vigorous and very productive. Fruit medium to large, skin whitish green; flesh soft, juicy.

Houghton. Bush a vigorous grower, with rather slender branches; very productive. Fruit medium size, pale red, tender and good.

Pearl. Bush moderately vigorous, immensely productive. Fruit about the size of Downing, of fine quality.

Red Jacket. (Josselyn). Bush vigorous, upright and productive. Fruit varies in size from medium to large, skin pale red.

Transparent. One of the best for the North. Vigorous, hardy, very productive. Skin very thin and yet firm. Not new, but was grown many years ago but was forgotten temporarily because of the demand for large berries.

English variety

Industry. This is without doubt the most thoroughly tested and successful of the English varieties. The bush is strong, upright, immensely productive. Berries of the largest size, dark red. Each, 35¢.
BLACKBERRIES

Root-Cutting plants, each, 10c; 10, 60c; (postpaid, 85c) 100, $5.00; 1000, $35.00.

Ancient Briton. Of medium size and best quality; immensely productive. Extremely hardy, endures severe Winters without injury. A reliable market variety. Early Harvest. Medium; glossy black, of excellent quality; ripens early and ships well; compact, dwarf grower. Produces berries of medium size and fair quality when well ripened. The most popular Blackberry in this state. Ripens early; is productive and hardy.

DEWBERRIES

Root-Cutting plants, each, 10c; 10, 60c; (postpaid, 85c) 100, $5.00.

Laurelia. A low-growing trailing blackberry. Large, soft, sweet, of very good quality, with no hard core. The plant is quite hardy, and under favorable conditions, very productive. Earlier than Blackberries.

RASPBERRIES

Red varieties

Cuthbert. Deep, rich crimson, large to very large; very firm. One of the very best market varieties. Season medium to late. A remarkably strong, hardy and productive variety.

Early Harvest. Medium; crimson, very hardy and productive; one of the best early red varieties. The leading market berry of Minnesota firm, especially fine flavor; desirable for home or market use. A good bearer for a long time.

Mariboro. Light crimson, large, very firm, and of good quality. A fine early market variety; vigorous and productive.

St. Regis. New Everbearing Raspberry. Usually bears fruit the first year planted. The berries are large and of very fine quality, rich and sugary, and keep longer after picking than most other sorts.

Red Varieties

Gregg. Black Raspberries. Has been for many years the leading market berry. Large, firm, of good quality, ripening late. Exceedingly productive.

Kansas. Black Raspberries. Berries as large as Gregg and of better color; very little bloom; of best quality; ripens early. Very strong grower and immensely productive.

Grapes

Price, two years old, No. 1 stock. Each, 25c; (postpaid, 50c); 10, $2.00, except where noted.

Brighton. Red. Bunch medium to large, long, compact, shouldered; berries medium; skin thin; flesh tender, sweet, with scarcely any pulp; quality best. Vine a vigorous grower, healthy and productive; one of the best early red Grapes. The flowers have reflexed stamens and do not always fertilize fully unless planted with Concord, Martha or other varieties which bloom at the same time.

Campbell's Early. Black. Bunch large, shouldered, compact; berries large, covered with a rich bloom; skin tender, but sufficiently firm to carry well to distant markets; flesh juicy, sweet, pulpy, tender; vine a strong grower, very healthy and productive. For general cultivation the most reliable sort.

Delaware. Red. Bunch small, compact, sometimes shouldered; berries small, skin thin, but firm; flesh juicy, very sweet and refreshing, of best quality for both table and wine. Vine hardy, productive, a moderate grower; requires rich soil and good culture.

Martha. White, sometimes turning pale yellow when fully ripe. Bunch medium, compact, shouldered; berries medium, skin thin, tender, flesh very sweet. Vine healthy and hardy.

Moore's Early. Black. Bunch rarely shouldered, not quite as large as Concord; berries larger and very much like it in flavor and quality. Vine a moderate grower, very healthy and hardy. Produces a fair and, with high cultivation, a heavy crop. Ripens so early to be harvested before Concord is ripe and is, therefore, a very popular early market variety. Succeeds best on rich soil.

Poolestown. Pale green, usually with tinge of golden yellow where exposed to the sun; bunch large, very compact; berries very large, covered with a beautiful white bloom; flesh juicy, sweet, with considerable pulp. Vine a moderately good grower, but very healthy and very hardy, its buds withstand- ing severe cold even better than Concord. It produces a heavy crop of fine, showy clusters.

Berry Culture. All berries do best in a rich, stiff loam, rather clayey than sandy. The ground should be retentive of moisture, yet well drained. They should all be mulched after ground freezes, with straw or other coarse litter for winter protection. For any leaf destroying worms use arsenate of lead. Stir shot or some other insecticide. See page 157. For borers, remove the injured canes. Bordeaux mixture spraying will help check rust and blight but prevention is best—clean cultivation and proper pruning are essential. Always cultivate thoroughly until fruiting time.

Blackberries. Set in rows 8 feet apart, space 2 to 4 feet apart in the row. The younger canes should be cut back when 2 feet high to induce branching. Remove old canes every year after flowering. They should be gathered and burned at once to prevent insects and diseases. Currants. Rows 6 feet apart, 4 feet apart in row. The fruit is borne on both old and young wood but the best is on 1 year old shoots and spurs. Prune by cutting back old wood 4 to 8 main stems. Leave no wood over 3 years old. Shorten vigorous, straggling shoots and thin out old wood. Gooseberries. Rows 5 feet apart, 3 feet apart in row. These bear best on 2 and 3 year wood. Prune to encourage continuous growth of vigorous shoots. Raspberries. Rows 6 feet apart, 4 feet apart in row. Remove old wood after bearing. Prune Black Raspberries when 18 inches high to induce branching.
Select Apple Trees

Suitable for the Northwest.

CULTURE. Plant apple trees 20 feet apart and plums 18 feet apart, in rich soil. Press soil down very firmly around roots and mulch surface with straw.

Pruning. For 5 to 6 foot trees with a 3 to 5 foot stem, prune the branches back to within 3 or 4 buds of their base. Cut off all bruised or broken branches and roots.

Spraying. Use Arsenate of Lead to kill worms and leaf eating insects; Bordeaux Mixture for scab and fungus diseases. Use some form of tobacco extract for aphids. See page 135.

Price. Three years old, 11-16 inch and up, five to six feet, each, $3.00; 10, $25.00; 100, $250.00. Four to five feet, 9-16 to 11-16 inch, each, 25c; 10, $2.00; 100, $18.00. Three to four feet branched, 7-16 to 9-16 inch, each, 15c; 10, $1.25; 100, $10.00. 25 at 100 rate.

Autumn Apples.

Duchess. Large, streaked red and yellow, good cooking favorite, tender and juicy. August and September. Very hardy.

Hibernia. Fruit large, greenish-yellow and bronze-red; flesh acid, juicy and good for cooking. November and December.

Tetofski. One of the earliest. Fruit small to medium; light yellow, striped and splashed red. Fruit tender and juicy.

November and December.

Oakena. Very popular; fruit medium, yellow, striped and splashed with carmine; quality excellent, crisp and juicy. September to November.

Maple. Sweet; very good dessert variety.

Winter Apples.

Anisim. Fruit medium, greenish with dark red, sub-acid. Season, November to January.

Malina. Fine keeper. Season February to March; fruit medium; green with blushed; flesh hard.

McIntosh. Medium, deep crimson, highest quality, juicy, sub-acid. Winter. Fine dessert variety, spicy odor.

Northwestern Greening. Large, green becoming yellowish-green. One of the best. December to March.

Parent's Greening. Large, green and blushed; flesh yellowish-white; pleasant acid flavor. November to January.

Wealthy. Special dessert and cooking apple. Season October to March. Fruit medium, skin smooth, mostly covered with dark red. Flesh white, very juicy and of delicious aroma.

Wolf River. One of the largest grown in the North. Season October to January. Very handsome and showy.

CRAB and HYBRID APPLE TREES.

Prices same as for Apples.

Florence. Light yellow, streaked with red. A splendid large variety.

Hyslop. Deep crimson. October to December.

Okabena. A near hybrid sort for northern growing.

Orange. Hardy, productive, fine quality.

Transcendent. Immensely productive, the skin is yellow, striped with red.

Whitney. A heavy bearer. Season August and September. Fruit large, yellow and red; flesh yellow, rich and sweet.

CHOICE PLUMS.

Price. Three years old, five to six feet, 11-16 inch and up, each, 75c; 10, $6.00; 100, $45.00. Four to five feet, 9-16 to 11-16 inch, each, 50c; 10, $4.00; 100, $30.00. Three to four feet, 6-16 to 9-16 inch, each, 40c; 10, $3.25; 100, $25.00.

Cherry. Early; dark red with blue bloom.

De Soto. Unsurpassed quality; fruit orange-red. Season medium.

Hawkeye. One of the largest and best; color dull red over yellow.

Ochella. Medium size; color dull mottled red. Sweet and rich.

Surprise. Fruit large; color bright red; quality extra good; season medium.

Weaver. Tree stony. Fruit large, oval; color orange overlaid with red.

Compass Cherry-Plum.

Price. Three years old, four to five feet, 9-16 to 11-16 inch, each, 50c; 10, $4.00; three to four feet branched, each, 40c; 10, $3.00.

This famous hybrid originated in Minnesota and is a cross between the Sand Cherry and a Plum. Nearly an inch in diameter, a bright red, sweet and juicy.

Hansen Hybrid Plums.

Sapa. A cross between the Sand Cherry and a purple fleshed Japanese Plum. Originated by Prof. Hansen of the South Dakota Experiment Station.

The fruit has the rich dark purple flesh of the Japanese plum and the hardiness and prodigiously of the Sand Cherry. Plums are nearly as large as California fruit, quality as good and hardier, very prolific. 4 to 8 ft., each, 50c; 10, $4.00; 100, $30.00.

Opal. A cross between the Sand Cherry and a hybrid Japanese Plum. Very vigorous and hardy. Fruit measures over an inch in diameter. Sweet and of delicious quality; skin thin, pit small, season early, color dark purple red with blue bloom, flesh green. Prices same as for Sapa Plum.
Choice Ten Apple Trees
For The Northwest.
Northern Grown. 5 to 6 ft.

These trees will be well packed in bundles wrapped in burlap and straw, so they can be safely shipped by freight or express.

Autumn Apples.
Duchess. Large, streaked red and yellow, excellent for cooking, also good dessert sort.
Hibernal. Fruit large, greenish-yellow and bronze-red, flesh acid, juicy and good for cooking.
Okabena. Very popular, fruit medium, yellow, striped and splashed with carmine, quality excellent.
Yellow Transparent. Usually starts to bear when quite young. Hardy grower, fruit delicious.

Winter Apples.
Malinda. Fine keeper. Season February to March; fruit medium size, green with blush; flesh hard.
Northwestern Greening. Large, green becoming yellowish-green. One of the best Apples for general use.
Patten's Greening. Large, green and blush; flesh yellowish-white; pleasant acid flavor. November to January.
Peerless. This variety originated in Minnesota. It is green, striped with red, of very good quality, extremely hardy.
Wealthy. Splendid dessert and cooking apple. Season October to March. Dark red fruit, flesh white, very juicy and of delicious aroma.
Wolf River. One of the largest grown in the north. Season October to January. Very handsome sort.

All the above packed 10 of one kind to a bundle. Price, $2.50 per bundle, F. O. B. Minneapolis. For April shipment.

Special Introductory Offer.
Combination bundle, containing one tree each of the 10 varieties, $2.50. These trees will be packed only as described above. Orders accepted for complete bundles only.
CLIMBING AND TRAILING SHRUBS.

We offer two-year-old transplanted stock only for shipment by express or freight. If single plants are wanted by mail, add ten cents each, extra, to cover cost of mailing.

Ampelopsis. Woodbine.
A. quinquefolia. Common Woodbine or Virginia Creeper. A very rapid climber. Each, 5c; (postpaid, 45c); 10, $3.00.
A. quinquefolia var. Engelmanni. Engelmann's Woodbine. Clinging tendrils and shorter joints than quinquefolia which gives it better ability to climb and cling. Adapted to this climate. Each, 40c; 10, $3.50.

Aristolochia Siphn. Dutchman's Pipe. Flowers resemble old fashioned Dutch pipes. One of the most rapid climbers in use, and very desirable for shade or screen purposes. Does best where the full force of the noonday sun does not strike it, its foliage is damaged by too much heat. Each, 75c.

Celastrus scandens. Bitter Sweet. Handsome, glossy green foliage with large clusters of orange crimson fruits in the Fall. Each, 35c; 10, $4.00.

Cinnamon Vine. A beautiful climbing vine, which will quickly surround an arbor, window or veranda with a profusion of vines covered with handsome, glossy, heart-shaped leaves, bearing great numbers of delicate white blossoms, which emit a delicious cinnamon fragrance. We know of no vine that is more satisfactory, thriving everywhere, and when once planted will grow for many years and be a source of constant delight. Each, 5c; 3 bulbs for 15c; 6 for 25c, postpaid. Mammoth size, 25c each, postpaid.

L. flava. Minnesota Honeysuckle. A rare form; with broad, glaucous foliage; flowers followed by orange-scarlet fruit. Each, 40c; 10, $3.50.

Lycium chinense. Matrimony Vine. Rapid, dense growing climber. Pink and purple flowers, followed by brilliant, crimson berries. Berries are poisonous. Vines should be used on walls, etc., so as to hang out of children's reach. Especially desirable for the Northwest. Each, 35c; 10, $4.00.
Madeira Vine. A rapid and dense growing climber twining to a great height. Bears fleshy, heart shaped, light green leaves and long stems of fragrant, white flowers. Each, 5c; 6 doz., 50c, (postpaid, 60c).

Vitis riparia var. Beta. Beta Grape. A hybrid of the wild grape. The fruit is much larger than the wild grape and of a very much better quality. Especially fine for wine, jellies, etc. Each, 5c; 10, $4.50.

Wistaria. The Wistaria is particularly valuable wherever tall-growing climbers are wanted. The flowers are borne in long pendulous clusters. Chinese Purple. Lovely, rich violet-purple; delicately scented and handsome. Large plants by express, 15c each, (postpaid, 15c).
Chinese White. Similar to the purple variety but with pure white flowers. Large plants by express, 50c, each, (postpaid, 50c).

The Northwestern Collection of Hardy Shrubs.
Highly Effective and Ornamental for the Home Grounds.

These were selected as the hardiest and most satisfactory for the Northwest.
They are suitable for planting around the porch as well as about the garden or lawn, and when well established will furnish a succession of beautiful bloom from May until Autumn.

Spiraea Van Houttei or Bridal Wreath.
Pure white flowers in long panicles, which droop almost to the ground, giving the appearance of driven snow. The foliage is very graceful—the small leaves being a fine dark green. Each, 50c.

Hydrangea Paniculata Grandiflora.
The showiest of all Autumn flowering shrubs, bearing immense heads of creamy white flowers. Upon the approach of cold weather these turn rich shades of pink and coppery red. This shrub is splendid for a specimen lawn plant or mass planting in front of taller shrubs. Each, 50c.

Everblooming Snowball Hydrangea.
This new American Hydrangea is considered by many the most beautiful hardy flowering shrub ever introduced. It blooms nearly all Summer, bearing large clusters of dazzling white flowers. It is similar to a perennial in its habit of dying back to the roots each Winter, sending up its new top growth in the Spring. Each, 50c.

Old Fashioned Lilac.
The favorite variety of all fine old gardens. This Lilac bears dense panicles of fragrant lavender blossoms in May. The bush is an upright grower, with large, glossy leaves. Each, 50c.

Snowball.
This popular shrub bears its snow white flowers in early June. It is perfectly hardy, vigorous and very free blooming; of erect habit. Each, 50c.

Syringa or Mock Orange.
A graceful, upright bush with long branches and dark green foliage. In June it is completely covered with showy, white flowers of a delightful, orange blossom fragrance. Each, 50c.

Northwestern Collection.
One of each of the above hardy shrubs, six in all, for $2.50, by express or freight at purchaser's expense.

Hardy Hedge Plants.
Plant in April.

Spiraea Van Houttei or Bridal Wreath.

Everblooming Snowball Hydrangea.
**SHRUBS**

**EVERBLOOMING SNOWBALL HYDRANGEA**

**HYDRANGEA PANICULATA GRAND.**

**HARDY ORNAMENTAL SHRUBS**

Note Collection, page 111.

Key to size and blooming period. To assist the buyer in making selections from groups and in their proper arrangement when spacing, we give average height and season for blooming, using figures for the months. Thus “1-4 ft., 7-9” means that the species under ordinary conditions attains a height of 1 to 4 feet and blooms in the months of July, August, and September. For heights see page 111.

By express or freight only, except where noted. Five at the rate for ten, less than five at the each rate.

**Amelanchier botryapum, var. Success.** Success Juneberry. 5-6 ft. An improved variety of the native Juneberry. Bears white flowers in late April followed by dark red berries which are edible and of very good quality for pies, sauces, etc. It has a nice habit and fine foliage. Each, 40c; 10, $3.50.

B. vulgaris var. purpurea. Purple Barberry. 4-5 ft. Deep purple. Each, 40c; 10, $3.50.

**Cornus.** Thornier’s Japanese Barberry. 3 ft. Of low, spreading growth, forming a dense, impenetrable bush. Foliage takes on a splendid autumn coloring. Each, 40c; 10, $3.50.

**Caragana Arborescens.** Siberian Pea Tree. 15-20 ft. 6. An upright grower and very hardy, with beautiful, dense acacia-like foliage. Yellow, pea-shaped flowers. Each, 40c; 10, $3.50.

**Clethra Alnifolia.** Sweet Pepper Bush. 4 ft., 7-9. A beautiful shrub with rich green foliage, showy white spikes in Autumn, see illustration on opposite page. Each, 50c; 10, $4.75.

**Cornus Stolonifera.** Red Osier Dogwood. 4-5 ft. 5. Very handsome and popular on account of its dark red bark which makes it peculiarly effective in Winter. Each, 50c; 10, $4.90.

**Elaeagnus.** Russian Olive. Silver Berry. 5-20 ft. A beautiful, small growing tree with light gray, olive-shaped foliage, the young growth being of the same color. The small yellow flowers which appear in June have a delightful, penetrating fragrance. Each, 50c; 10, $4.00.

**Euonymus atropurpureus.** Burning Bush or Strawberry Tree. 7-8 ft., 6. Broad foliage with small but showy flowers in clusters, followed by crimson fruits. Each, 40c; 10, $3.50.

**Forsythia Fortunii.** Golden Bell. 4-7 ft., 4-5. An upright bush with handsome pendulous bright yellow flowers in early Spring. Foliage deep shining green. Each, 40c; 10, $4.00.

**Hydrangea paniculata grandiflora.** Large Panicled-Flowered Hydrangea. 7-9 ft., 7-8. The showiest of all autumn blooming shrubs, bearing immense heads of creamy white flowers, turning to pleasing shades of red with the approach of cold weather. 2 to 3 ft., each, 50c; 10, $4.50.

**Hydrangea.** (Tree Form). Trained to a straight stem to produce a small tree for ornamental planting. Shown as supported with a stake until trunk becomes heavy. Each, 75c.

**Lonicera.** Bush Honeysuckle.

L. tartarica. Tartarian Honeysuckle. 8 ft., 5. Pink flowers which contrast beautifully with the foliage. A fine shrub for large hedges. Each, 50c; 10, $4.50.

L. tartarica var. alba. Creamy white flowers. Each, 50c; 10, $4.50.

L. tartarica var. graminea. Bright red flowers striped with white. Each, 50c; 10, $4.50.

L. tartarica var. splendens. Improved sort with larger flowers, pink. Red fruits. Each, 50c; 10, $4.50.

**Philadelphus.** Syringa or Mock Orange.

P. coronarius. 5-10 ft., 6. Fragrant, pure white. Each, 40c; 10, $3.50.

P. Gordonianus. Gordon’s Syringa. Strong, rapid growth; flowers large. Each, 40c; 10, $3.50.

P. Grandiflorus. Large Flowered Syringa. Rapid growth, red bark; flowers large. Each, 40c; 10, $3.50.
Rhamnus catharticus. Buckthorn. 4-8 ft. This variety is being much used for hedges in the north and central states. It is a stiff, twiggy bush and bears shining well. Dark green foliage and white flowers in June and July followed by showy black fruits. Each, 50c; 10, $4.50.

Rhus succedanea. Ornamental, very rapid grower shrubs and trees.

R. cotinus. Mist or Smoke Tree. 5-8 ft. A vigorous, bushy grower with large panicles of purplish-green, feathery flowers in June. Each, 40c; 10, $3.50.

R. typhina. Staghorn Sumach. 7-10 ft. A large, handsome shrub with brilliant foliage and scarlet fruit in Autumn. Each, 50c; 10, $4.50.

Ribes. Flowering Currants.

R. auratum. Missouri Currant. 5-6 ft., Golden yellow, spicily fragrant. Each, 40c; 10, $3.50.

R. glandulosum. Crimson Flowered Currant. 3 ft. Handsome, deep green foliage and very showy spikes of deep crimson flowers. Each, 40c; 10, $3.50.

Rosa Rugosa. Japanese Rose. 4 ft. Elegant, broad, shining green foliage; continuous clusters of showy, large, single flowers followed by immense fruit which are very attractive late in the season. We carry two varieties in stock, one having red flowers and scarlet fruit, the other having white flowers and orange colored fruit. See page 103. 2-year old, each, 40c; 10, $3.50.

Sambucus. Elder.

S. canadensis. Common Elder. 8 ft. - 7 ft. A useful plant where rapid growth and dense foliage are requisite. Dark purple berries used for jelly and wines. Each, 40c; 10, $3.50.

S. racemosa. Scarlet Berried Elder. 5-6 ft., 5. White flowers followed by dense bunches of vivid colored fruits. Of decided ornamental value. Each, 50c; 10, $4.00.

Shepherdia argentea. Buffal Berry. 4-5 ft. 5. The coming shrub for ornamental hedges. Very hardy. Has luxuriant growth of side sprays, and the branches cover well with foliage after being trimmed. Leaves are a light green above and silvery beneath, giving an effect similar to the Russian Olive. Also a very desirable specimen on the lawn. Each, 50c; 10, $4.50.

Spiraea. Knee high shrubs offer a great variety, both in flowers and foliage, making them of great value in a collection. Of easy cultivation and rapid growth.

S. bumalda, var. Anthony Waterer. 2-3 ft. - 5 ft. A fine new dwarf Spiraea with dark crimson flowers, data old illustration on opposite page. Each, 50c; 10, $4.00.

S. callosa. Fortunei Spiraea. 3-4 ft. 6. Has large panicles of deep rosy blossoms. Grows freely and blooms nearly all Summer. Each, 50c; 10, $3.50.

S. opulifolia. Golden Spiral. 6-7 ft. 6. The strongest grower of this class and one of the most useful. Branches upright though drooping when loaded with its white flowers in June. Foliage is a bright, yellowish gold, finely shaped. A most excellent sort for backing shrubbery or mass planting and also for hedges. Each, 40c; 10, $3.50.

S. salicifolia. Low Leaf Spiraea. 4-5 ft. 8. An upright grower with narrow, pointed foliage and rosy flowers in June and July. Each, 50c; 10, $4.00.

S. sorbifolia. Ash Leaved Spiraea. 4-5 ft. A vigorous growing bush with large, handsome foliage resembling the common Ash. Long spikes of white flowers in July. Each, 40c; 10, $3.50.

S. Van Houttei. Bridal Wreath. 4-5 ft. 5-6. The best and most popular of all Spiraeas. Its long, slender branches are arched by their own weight and when covered with the handsome bluish-green foliage and masses of white flowers, the branches droop until the tips touch the ground. See illustration on page 111. Each, 50c; 10, $4.50.

Symphoricarpus. Snowberry.

S. racemosus. Snowberry. 4 ft. Rose colored flowers in July and August followed by white berries which remain until Winter and make it very showy. Excellent for shaded places. Each, 40c; 10, $3.50.

S. vulgaris. Coral Berry or Indian Currant. 3-4 ft. Resembles Racemosus but is more compact. The flowers which appear in July are succeeded by dark purplish-red berries in clusters. Valued for its persistent foliage and well adapted for shaded places. Each, 40c; 10, $3.50.

Syringa. Lilac.

We offer below some newer varieties, besides the old favorites.

S. japonica. Japan Tree Lilac. 12-15 ft. 6-7. Pyramidal and upright in form, making a handsome little tree. Broad foliage and creamy white flowers; very late. Each, 50c; 10, $4.50.

S. josikaea. 3-4 ft. 5-6. A distinct species of tree-like growth with dark shining leaves and purple flowers. Each, 50c; 10, $4.50.

S. persica. Persian Lilac. 5-6 ft. 5-6. From five to six feet high with small foliage and bright purplish flowers. Each, 50c; 10, $4.00.

S. Sibirica alba. Siberian White Lilac. 7-8 ft. 6. A vigorous grower, foliage small and narrow, flowers with a bluish tint. Each, 50c; 10, $4.50.

S. vulgaris. Old-Fashioned Lilac. 5-10 ft. 5. Blush-purple flowers. Each, 40c; 10, $3.00.

S. vulgaris alba. Common White Lilac. Same as Vulgaris but pure white. Each, 40c; 10, $3.00.

Viburnum.

V. populus. High Bear Cranberry. 7-8 ft. One of the handsomest of shrubs of this species. The large, white flowers appear in May and are followed by clusters of scarlet berries which retain their color until late Fall. Each, 50c; 10, $4.00.

V. opulus, var. sterling. Snowball on Gumbles Rose. The old-fashioned, popular Snowball. This has no fruit. Each, 50c; 10, $4.00.

NOTE: We offer a limited quantity of both of these Viburnum in "Tree Form." They are trained up to a small bush upon a pruning stake to come out three or four feet from the ground. They give a pleasing variation from the regular shrubbery effect. Very desirable for lawns. Each, 75c.

For Hedges see page 111. Note collection on page 111.
Northrup, King & Co., Seedsmen, Minneapolis, Minn.

**Hardy Trees for Northern Planting.**

For April Shipment. Please send orders in February or March.

The best grown trees are Northrup Grown Trees. Why? Because there are no other trees so vigorous in growth, so hardy in resisting cold Winters and dry Summers, so early to bloom, so early to fruit, as the trees that are grown under the special care and conditions of the Northrup Nursery. The growth is rapid, the fruit is abundant, the trees are healthy, and the yield is large. A large order fills the entire stock, and the smaller orders are filled from the surplus trees that are left over. The trees are varied in size and in kind, and the selection is made from the best stock that can be had. The trees are grown in the most suitable soil and climate, and the most suitable methods of cultivation are employed.

**Hardy Shade and Ornamental Trees.**

Under this head we include selected varieties of Deciduous Trees best adapted for use in the North, for both ornamental and shade purposes. Our stock in this class is all strong, transplanted, well developed roots and good form. The stock quoted here is of the best varieties used in planting, averaging between 4½ to 14½ inches in caliper and 6 to 12 feet in height according to the variety. Diameter given is at 1 ft. from ground. In most varieties 1 inch trees average 6 to 8 feet, 1½ inch, 8 to 10 feet, etc. By express or freight only, at purchaser's expense.

Acer. Maple.

A. saccharum.**CUT LEAFED RED MAPLE.** The well known North American species; a favorite street tree. 1½ inch, each, 1½; 2½, 4.50; 3½, 6.00; 5, 9.50; 7, 14.00; 10, 20.00.

*Express Shipments a Specialty.* A. saccharum var. Weilir Lacinatum. Weilir's CUT LEAVED SILVER MAPLE. A remarkable and beautiful tree, much painted in the first quarter of the century. The growth is rapid, branches slender and drooping, giving it a habit almost as graceful as the Cut Leaved Birch. 1½ inch, each, $1.25; 2½, 3.50; 3½, 5.50; 5, 10.00.

A. saccharinum. Sugar on Rock Maple. A well known native tree of elegant pyramidal form. Much used for avenue planting, and makes a splendid specimen tree for its brilliant autumn foliage. 1½ inch, each, $1.25; 2½, 16; 3½, 10.00; 5, 16.00; 10, 30.00.

Betula. Birch.

**B. alba. European White Birch.** Tree graceful, quite erect when young but assumes a drooping habit with age. 1½ inch, each, 15c; 2½, 1.50.

**B. alba var. pendula laciniata. CUT LEAVED WEEPING BIRCH.** This variety is the most popular of all pendulous trees. It is slimmer and more graceful than the other. White bark and delicately cut foliage present a combination of attractive characteristics rarely met with in a single tree. Hardy and desirable for borders and landscape purposes. 1½ inch, each, $1.25; 2½, 10; 3½, 15.00.

B. populifolia. American White Birch. The well known American species; rapid growth and fine foliage. 1½ inch, each, $1.00; 2½, 6.50; 3½, 10.00.

**Catalpa.**

C. bignonioides, var. speciosa. Western Catalpa. Much used in forest plantings. Its blossoms open too late for eastern varieties. Hardy except in extreme seasons. 1½ inch, each, $1.00; 2½, 6.00; 3½, 10.00.

**Catalpa bignonioides.** Western Catalpa. Much used as a street tree on account of its fine, regular form and hardy characteristics. 1½ inch, each, $1.00; 2½, 6.00; 3½, 10.00.

**Gymnocladus canadensis.** Kentucky Coffee Tree. A strikingly ornamental, irregular open-topped tree with peculiar, rough-barked and twigless branches; minute, compound foliage of a peculiar, blueish green color. The flowers are white and the pods followed by large, long, brown seeds. 1½ inch, each, $2.50; 10, 30.00.

**Fraxinus viridis.** Green Ash. A handsome, hardy tree. Its blossoms open too late to have any form much advantage for eastern varieties. 1½ inch, each, $1.00; 2½, 6.00; 3½, 10.00.

**P. monolittha.** Canvas Ash. Has sprung into great popularity of late. Pyramidal in form and of robust growth. Valuable for street planting and screening. 1½ inch, each, 75c; 2½, 5.00; 3½, 8.00.

**Salix pendula.** American Weeping Willow. A vigorous grower with beautiful pendulous branches. Forms a round, even-shaped head and is valuable for lawn ornament in the North. When used as a street tree, the Pendula gives quick effect and is very much desired by judges. 1 inch, each, 75c; 10, 5.00.

**Sorbus. Mountain Ash.** Ornamental tree with fine pinnate foliage. Bears numerous clusters of bright red berries which are very conspicuous from mid-summer until frost. 1½ inch, each, 75c; 10, 5.00.

**Tilia. Linden.** Pyramidal habit when young but expands into a large, round-headed tree. Its foliage is very large and of a light green color. One of the best ornamental trees. Valuable for street use and most suitable for shady sites. 1 inch, each, 75c; 10, 5.00; 2½, 8.00; 3½, 12.00; 10, 25.00. T. Euopaea. European Linden. A vigorous grower but of much smaller size than the American. Its foliage is smaller and green on both sides. When in bloom it is very handsome. 1 inch, each, $1.00; 10, 9.50.

**Ulmus. Elm.** The Native American Elm. A magnificent native tree and probably the most famous tree in the Northwest for street and lawn planting. One of the most characteristic and picturesque of American trees. 1½ inch, each, $1.25; 10, 18.00; 2½, 10.00; 1 inch, each, $1.00; 10, 8.00.

White or Silver Maple.

**J. cirens.** Silver Maple. A broad, open-topped, ornamental tree with light green, compound foliage and characteristic gray bark. 1½ inch caliper tree, $1.50; 3½, 6.00. J. nigra. Black Walnut. A well known native tree and very ornamental. 1 inch, each, 75c; 10, 6.00.

**Negundo fraxinifolium.** Box Elder. Like in its seed and Ash-like in its foliage. An extremely hardy and rapid growing tree; much planted on the prairies. 1½ inch, each, 75c; 10, 5.50.

**Populus. Poplar.** P. alba. White or Silver Poplar. A tree of wonderfully rapid growth and wide spreading habit. 1 inch, each, $1.00; 10, 9.00.

**Sorbus. Mountain Ash.** Ornamental tree with fine pinnate foliage. Bears numerous clusters of bright red berries which are very conspicuous from mid-summer until frost. 1½ inch, each, 75c; 10, 5.00.

**S. aucuparia.** European Mt. Ash. A handsome, ornamental tree with fine pinnate foliage. Bears numerous clusters of bright red berries which are very conspicuous from mid-summer until frost. 1½ inch, each, 75c; 10, 5.00.

**Tilia. Linden.** Pyramidal habit when young but expands into a large, round-headed tree. Its foliage is very large and of a light green color. One of the best ornamental trees. Valuable for street use and most suitable for shady sites. 1 inch, each, 75c; 10, 5.00; 2½, 8.00; 3½, 12.00; 10, 25.00. T. Euopaea. European Linden. A vigorous grower but of much smaller size than the American. Its foliage is smaller and green on both sides. When in bloom it is very handsome. 1 inch, each, $1.00; 10, 9.50.

**Ulmus. Elm.** The Native American Elm. A magnificent native tree and probably the most famous tree in the Northwest for street and lawn planting. One of the most characteristic and picturesque of American trees. 1½ inch, each, $1.25; 10, 18.00; 2½, 10.00; 1 inch, each, $1.00; 10, 8.00.
HARDY EVERGREENS
For planting in April, May and early June.

CONIFEROUS EVERGREENS.
The cone-bearing Evergreens which are natives of the northern states furnish some of the most valuable trees for ornamental planting—especially since they alone can give color to the winter landscape when all deciduous trees are bare. Evergreens are a permanent asset. As windbreaks and hedges they raise the temperature, keep the air more moist and protect against damaging winds. Farmers find them invaluable and it is becoming a common practice to surround the orchard with an evergreen shelter belt.

Abies Balsamea.  Balsam Fir.  A slender pyramidal tree of rapid growth and well adapted to lawn planting.  Foliage dark green, silvery beneath.  Hardy, and well formed tree.  18 to 24 inches, each, 50c; 10, $1.00.  24 to 30 inches, each, 75c; 10, $2.00.

Picea.  Spruce.  P. alba.  White Spruce.  One of the shapeliest coniferous trees.  Foliage silvery blue; growth compact and pyramidal.  Hardy, and a handsome native tree.  18 to 24 inches, each, 50c; 10, $1.50; 24 to 30 inches, each, 75c; 10, $3.00.

P. Douglassii.  Douglas Spruce from Colorado.  Large, conical in form with horizontal spreading branches, foliage light green above, glaucous below.  18 to 24 inches, each, 50c; 10, $1.50.

P. excelsa.  Norway Spruce.  A well known variety.  Hardy, but not so successful in the North as Picea Alba.  24 to 30 inches, each, 75c; 10, $2.00; 3 to 4 feet, each, $1.00.

P. nigra.  Black Spruce.  A native variety of pyramidal form.  Suitable for dry soils; one of the hardiest Evergreens for northern planting.  24 to 30 inches, each, 50c; 10, $1.00; 3 to 4 feet high, each, 75c.

P. pungens.  Colorado Spruce.  A noble tree from the Rocky Mountains.  Branches stiff and close.  Foliage light green.  Hardy, and a very handsome native tree.  18 to 24 inches, each, 50c; 10, $1.50; 24 to 30 inches, each, $1.00.

P. pungens, var. glauca.  Colorado Blue Spruce.  A form of P. Pungens with the same general character but foliage of an exceedingly rich silvery blue.  One of the most valuable for ornamental planting.  18 to 24 inches, each, $3.50; 2 to 3 feet, each, $5.00.

Pinus.  Pine.  P. sibirica.  Austrian Pine.  Round form, vigorous growth; glossy, dark green foliage.  Good for a specimen or mass planting.  24 to 30 inches, each, $1.00; 10, $9.00; 3 to 4 feet, each, $1.25.

P. montana.  Dwarf Mt. Pine or Mugo Pine.  A low, broad spreading tree, more or less of a bush.  Dwarf branches with deep green foliage.  12 to 15 inches, each, 50c; 10, $0.75; 18 to 24 inches, each, $1.00; 10, $9.00.

P. strobus.  White Pine.  One of the most stately, beautiful and valuable of our native Evergreens.  Tall and straight with slender, glaucous foliage somewhat tufted at end of branch.  Extremely graceful tree and valuable all over the Northwest.  18 to 24 inches, each, 50c; 10, $1.50; 24 to 30 inches, each, 75c; 10, $6.00.

P. sylvestris.  Scotch Pine.  A luxuriant grower in most any soil.  Forms a broad, pyramidal tree of dense growth.  Foliage of a pleasing bluish green.  18 to 24 inches, each, 50c; 10, $1.50; 24 to 36 inches, each, 75c; 10, $6.00.

Thuya.  Arbor Vitae.  T. occidentalis.  American Arbor Vitae.  Our well known native variety and one of the best.  If not the best.  Evergreen for hedges as it permits severe pruning and may be trained into any desired form.  Extremely hardy, transplants easily and succeeds in nearly any soil.  18 to 24 inches, each, 45c; 10, $4.00; 24 to 30 inches, each, 50c; 10, $5.00.

T. occidentalis, var. pyramidalis.  Pyramidal Arbor Vitae.  Very upright with same habit as Irish Juniper.  Growth very dense with rich, dark, luxuriant foliage.  Very useful where columnar effects are desired.  18 to 24 inches, each, 50c; 10, $1.50; 24 to 30 inches, each, $1.00; 10, $9.00.

T. occidentalis, var. Siberica.  Siberian Arbor Vitae.  Growth compact; forming a round, even head.  Works well in groups with Pyramids.  18 to 24 inches, each, $1.00; 10, $8.00.

Evergreen Trees by Mail.
Pine for hedges, windbreaks and ornamental lawn planting.  Twelve different packages.  These packages cannot be broken.  By mail postpaid to any part of the United States, $1.00 per package, 6 packages for $5.00.

These varieties have been thoroughly tested, proven hardy and reliable; will grow successfully in all parts of the country.  Complete planting instructions and cultural directions furnished with each order.  Send in your orders as early as possible to avoid disappointment.

Shipments will be made in May or April.

1. Norway Spruce.  The variety much used for Christmas trees.  Very ornamental; of conical shape.  100-3-year.

2. Scotch Pine.  A vigorous grower, having long, needle-like foliage which is a pleasing shade of bluish-green.  100-2-year.

3. Douglas Fir.  Splendid, tall growing variety with regular branches and dark red-brown bark, long needles.  100-3-year.

5. White Pine.  The handsomest of our native Pines.  100-1-year.

6. Black Hill Spruce.  Beautiful, small tree; 30 inches high, with slender drooping branches.  50-4-year.

7. American Arbor Vitae.  Popular screen and hedge tree.  100-3-year.

8. Dwarf Mountain Pine.  A dwarf, spreading tree.  100-3-year.

12. White Spruce.  Color a bluish green.  It forms a loosely symmetrical tree with rather pendant branches.  100-3-year.

Price, postpaid, $1.00 per package, and 6 for $5.00.

Evergreens can be safely transplanted long after the deciduous trees and shrubs have come into leaf.  Do not postpone planting them until Fall.  Do not plant in April, May and early June.
Northrup, King & Co., Seedsmen, Minneapolis, Minn.

BEAUTIFUL GLADIOLI

Most Popular Cut Flower Of The Day, Now Within The Reach Of All.

Gladioli are highly ornamental whether growing among shrubs or in garden rows. If they are cut as the first bud expands they last a week or ten days in the house and every bud opens perfectly. What could be more decorative than a bunch of these great spikes with their two or three foot stems? No flower can match them in ease of culture or diversity of color. The Gladioli are the most attractive of summer-dowering bulbs. They bloom just when the garden needs lighting up. Their bright spikes help the perennial border especially, which so often lacks color at midsummer before its autumn revival. When used in the rose bed their season follows the June rose.

They are not delicate exotics needing protection from Summer's hot winds and scorching sun, but strong and hearty growers. Yet with all their hardiness they are not Cold Tenders, as delicate as Orchids, as exquisitely as the humming birds which dart among their brilliant blossoms. We advise our customers to plant Gladioli in masses, as they are always most effective when grown in groups of twenty-five or fifty bulbs of a kind or color, either in the perennial or a summer border. Without special prices on quantities, one can well afford to plant them extensively.

America. An Exquisite Delicate Pink. A rare, dark shade, bordering on blue. Should be planted with a light variety for contrast. Each, 5c; doz., $0.30; 100, $3.50.

Augusta. Popular White. Pure White. Each, 5c; doz., $0.30; 100, $3.50.

Baron Hulot or Blue King. Rich Deep Violet. Each, 5c; doz., $0.30; 100, $3.00.

Blushing Bride or Willy Wigman. Delicate Rose. Each, 5c; doz., $0.30; 100, $3.00.

Brenchleyensis. Vermilion Scarlet, Velvety Blooming. Each, 5c; doz., $0.30; 100, $3.50.

Empress of India. Deep Maroon. Rich velvety shade, very effective. Each, 5c; doz., $0.30; 100, $3.50.

Faust. Deep Crimson. Each, 5c; doz., $0.30; 100, $3.50.

Glory of Holland. Pure White. Each, 5c; doz., $0.30; 100, $3.50.

Halcyon. Salmon Pink. Shaded Yellow. Each, 5c; doz., $0.30; 100, $3.50.

Hollandia. Yellow Salmon. An Unusual Shade. Each, 5c; doz., $0.30; 100, $3.50.

Klondike. Yellow and Maroon. Each, 5c; doz., $0.30; 100, $3.50.

Lily Lehman. Pure White, Frilled Edge. Each, 5c; doz., $0.30; 100, $3.50.

Mrs. Frances King. Most Popular Light Scarlet. Each, 5c; doz., $0.30; 100, $3.50.

Niagara. Primrose Yellow. Each, 5c; doz., $0.30; 100, $3.50.

Panama. Finest New Pink. Each, 5c; doz., $0.30; 100, $3.50.

Pink Beauty. Pale Claret Pink, Shaded Deeper. Each, 5c; doz., $0.30; 100, $3.50.

Princeps. The Amaryllis Flowered Gladiolus. Each, 5c; doz., $0.30; 100, $3.50.

White Excelsior. Each, 5c; doz., $0.30; 100, $3.50.

Culture. The Gladiolus thrives in a sunny location, protected from wind. It appears to best advantage when planted among Peonies, Shrubbery or in masses or rows bordered with some low growing plants such as Candytuft, or Bachelor's Button. These make a pleasing contrast with the Gladioli. Gladiolus bulbs will grow in any good garden soil, but do much better when the latter has been enriched with well rotted manure. If the bulbs are planted at intervals from April to June the blooming period will extend from July until frost. A trench should be dug five inches deep and an inch of sand placed in the bottom to absorb surplus moisture. Then set the bulb (flat side down) in the sand. For earliest blossoms, draw 2 inches of soil over the bulbs at first, replacing the rest when the shoots appear. As the leaves develop, more earth should be drawn up around the base, to furnish support for the stalk. Keep the bed free from weeds and give plenty of water, especially during the blooming period. When the flower buds appear they should be staked. For Staked Flower Use. The spike should be cut as soon as the flower opens on the stalk, preferably before the dew is off in the morning but never in the heat of the day. Cut the stem about 9 inches above the ground and with as little foliage as possible. The foliage is needed for the development of the bulb. Prune the variety with long petals at least 8 inches of water. Remove the faded blossoms, cut a little off the stem and change the water daily. Treated in this way the bulbs will open perfectly. Before the ground freezes lift the bulbs, cut off half the roots and move to a cool shed or cellar. Here they should be spread out to dry, leaving plenty of air space between all bulbs and tops to prevent mold. A convenient method is to stand them up in flat metal or copper pans with a slight slope of water. After the tops are dry transfer them to a dry shed or room and prevent sprouting. At this time also the bulbs may be separated and the small side growths, or bulblets removed. The latter may be handled like the full bulbs and then the bulblets be placed in paper bags, sawdust or sand and put them from becoming too dry. Lastly, remove to a storage room having a temperature of about 35 degrees, to prevent sprouting.

If by mail add 5c per dozen, extra to above prices.
Northrup, King & Co., Seedsmen, Minneapolis, Minn.

NORTHRUP, KING & CO.'S GLADIOLUS MIXTURES.

Northrup, King & Co.'s

"Sterling" Mixture of Gladioli.

Amateurs with limited space for Gladioli will find these most satisfactory. They include white and light tints, pink and red. This is an extra choice mixture of all colors and many types. Only large blooming bulbs are included. It has been prepared for the sole purpose of giving a first class combination of varieties at a reasona-
ble price. It contains some of the finest named Gladioli in addition to the most beautiful new introductions and latest introductions. The spikes grow tall and erect. Orchids cannot surpass them in their varied and delicate shades, marks and combinations—pink, rose, scarlet, red, white and light tints. Some are self-colored, some with beautiful, mottled throats. Nothing finer has ever been offered at the price. Doz., 40c; 100, $3.50.

Primulinus Hybrids—New Race.

These Hybrids range in color from pale sulphur-yellow to the deepest chrome-yellow and all the charming shades of orange, including some almost white. The flowers are gracefully arranged on long, slender spikes; from a descriptive standpoint they are simply exquisite. Doz., 85c; 100, $5.60. If by mail, add 5c per dozen, extra.

Giant Flowering Mixed Gladioli.

Splendid for planting in masses and for showy backgrounds. These are grown from seed of the finest strains and are unexcelled for variation of color, well formed flowers and healthy bulbs. They contain a large proportion of show flowers. In this mixture all shades of color are well represented but by careful selection pink and cherry carmine predominate. The darker shades, while white grounds are also prominent. They send up beautiful, large flower spikes four or five feet high. Many branch freely, so that one stem produces three or four blooming spikes. The flowers are of great size, frequently seven to nine inches across. We recommend using these choice flowers for massing and producing showy backgrounds as the stiffer form of this type may not appeal to some gardeners so much as the more graceful spikes of the Sterling Mixture. Each, 6c; doz., 40c; 100, $3.50.

Excelsior Mixture.

A selected strain of hybrid selections from very choice parent stock. We can recommend this mixture as being one of extra good value. Light shades predominate. 6c per doz., 100, $2.75.

Fine Mixed Gladioli.

As the name signifies, this is a fine mixture and recommended to our customers who desire to make a brilliant show in the garden at a small cost. Plant them freely, and you will be delighted with their fine colors. Shades of red and pink in many combinations are prominent in this mixture. Doz., 100c; 100, $2.50.

Lemoine's Butterfly Hybrids.

This is an extra fine mixture of spotted and mixed blossoms. The gorgeous colorings and gay markings have caused these to be known as the "Butterfly Gladioli." Yellow, crimson, white, brown and pink are blended together to produce the most striking effects. Besides their gay colors and odd markings, they bloom two to three weeks earlier and are in full perfection before other sorts appear. Each, 5c; doz., 40c; 100, $3.00.

Child's Mixed Gladioli.

This mixture includes a complete range of color but there are fewer dark shades and more of the pink and blush tints in addition to the pale carmine and white. The flowers are extra large, strong growers. The bulbs in this mixture are very large and fine. Each, 8c; doz., 50c; 100, $3.50.

White and Light Shades.

Very desirable for cut flowers and exquisulate indoor decorations. These shades especially in demand by florists. Doz., 75c; 100, $3.00.

Pink and Rose Shades.

Many shades from faint tints to deep rose and cherry, all very attractive colors. Doz., 50c; 100, $1.50.

Scarlet and Red Shades.

Splendid, bold colors that are especially desirable for use in front of shrubbery or any place in the garden where some bright contrast is needed. Doz., 45c; 100, $3.50. If by mail, add 5c per dozen, extra.

Orange and Yellow Shades.

Unusual and charming shades of Gladioli. Fine for planting with lighter varieties for display bedding. Doz., 35c; 100, $4.60.

Violet and Purple Shades.

Rare colors of extreme beauty, rich blues, velvet purple, etc. Should be planted with light shades for contrast. Doz., 90c; 100, $4.60.

Collection A.

One of each of the Eighteen Selected Gladioli listed on the opposite page, $1.55, prepaid. A splendid opportunity to secure a beautiful collection.

Collection B.

Six of each of the Eighteen Selected Gladioli, described on the opposite page, 108 bulbs in all, $5.00, by express at purchaser's expense; or prepaid to any part of the U. S. for $5.36.

Collection C.

Twelve of each of the Eighteen Selected Gladioli described on the opposite page, 216 bulbs in all, $10.00, by express at purchaser's expense; or prepaid to any part of the U. S. for $11.60.

If by mail, add 5c per dozen, except where noted.
Six of a kind at dozen rate; 25 at 100 rate.

For other bulbs see page 119.

FACTS ABOUT GLADIOLI.

Gladioli thrive throughout the northern and central states. They are the best of all summer flowering bulbs. One cannot guarantee a crop of any flowers, since they are all subject to uncontrollable weather conditions, but there is no flower more certain to do well than the Gladioli. Few garden flowers last longer after being cut. They are fine for the children's garden since they are of so easy culture.

Gladioli are easily cared for over Winter, if the directions on the opposite page are followed. Then they may be planted out the following year and will continue to increase annually.

Plant Gladioli this Spring if you want beautiful flowers next Summer. They bloom from midsummer until frost if planted at intervals, every ten days up to early July.

Gladioli appear best in masses of twenty-five or more of one color.

For early flowers start the bulbs indoors in March or April and transplant to the garden in late May.

Plant Gladioli by the hundreds and thousands this year. The initial cost is less than ever before and the expense of growing them slight.

Create a demand in your neighborhood and the returns will be tenfold.

Princes.

Splendid, late flowering variety; flowers of enormous size, 18 inches in diameter and a dazzling scarlet red color with a small white band on each lower petal. Spikes produce 12 to 15 flowers and grow 4 feet in height. Each, 6c; doz., 50c; 100, $3.50.
Northrup, King & Co., Seedsmen, Minneapolis, Minn.

NORTHRUP, KING & CO.'S BEAUTIFUL DAHLIAS.

These varieties were selected from a very complete assortment as the cream of the entire list, for certain characteristics: Uprightness of growth, sturdiness, vigor and general freedom of bloom combined with rich, bright or pleasing colors. All are among the finest for cut flowers.

The word following the name indicates the type to which the variety belongs. The Cactus type is characterized by a Cactus bloom; the petals are long, rolled and incurving. The flowers are loosely formed and borne on long, graceful stems. Decorative Dahlias have blooms in single, double or semi-double forms; the petals are broad and ribbon-like, and display the colors of the blossom illustrated. The Pompon type consists of small blooms 1½ to 2 inches in diameter, and are borne in profusion on dwarf plants. Show Dahlias include many of the best varieties of a very double, rosette-like bloom and quilled petals. Single Dahlias resemble Cosmos blooms in shape, with a single row of flat petals. They are free-branching and bloom continuously throughout the season.

Price. Dahlias are for shipment by express at the purchaser's expense, except where noted. If wanted by parcel post, add 3c each, extra.

A. D. Livani, (Decorative.) A splendid, clear pink, beautifully quilled, fine form and very free flowering. Each, 25c.

Arabella. (Show.) Sulphur-yellow, shaded peach-blossom on edges, a fine flower. Each, 25c.

Bow lace. (Show.) A solid ball-shaped flower of deep garnet red. Extra fine. Height, 4 feet. Each, 25c.

Countess of Lonsdale. (Cactus.) Perfect in form and profuse blooming. Color, an exquisite shade of rich salome, with a splash of apricot at the base of the petals. The color deepen gradually to the finest carmine pink. Height, 3 feet. Each, 25c.

Delice. (Decorative.) The best, pure bright rose pink, entirely distinct. Each, 35c.

Dorothy Peacock. (Show.) An exquisite, shell pink; vigorous grower, continuous bloomer. Each, 25c.

Echel Naucr. (Show.) A grand, pure white of largest size and fine form. Each, 25c.

Flora. (Decorative.) A dependable pure white; very large, profuse bloomer, long stems. Each, 25c.

Golden West. (Decorative.) Large, clear yellow. Full double flowers with petals cleft at tips, extra free flowering. Each, 25c.

Jack Rose. (Decorative.) Ideal cut flower variety; in shape like a Full Rose. 3½ to 4 inches across, each flower borne on a two foot stem. The color is a brilliant crimson-red. See illustration. Each, 25c.

Kriemhilde. (Decorative.) An exquisite, delicate shell-pink, shading to white in the center; undoubtedly the finest and most perfect pink Cactus Dahlia to date. Each, 25c.

Morning Glow. (Cactus.) Primrose yellow, suffused with salmon at the tips. Each, 25c.

Palace D'Or. (Show.) Extra large and handsome; color light fawn and white. Each, 35c.

Pansy King. (Show.) Richest shade of orange; very free flowering. Each, 25c.

Perle de Lyon. (Cactus.) The best white of any class for double flowers; blooms of good size and habit elongated long, stiff, very strong. Each, 25c.

Prairie Fire. (Single.) A rich poppy-red, very free flowering, a brilliant cut-flower effect. Each, 25c.

Queen Mary. (Decorative.) Beautiful rose-pink with broad petals of splendid substance. Each, 25c.

Queen of Yellows. (Show.) Clear canary yellow, very prolific bloomer. Each, 25c.

Renee Ceyxet. (Cactus.) Rich geranium-red, one of the earliest blooming varieties. Each, 25c.

Royal Purple. (Show.) A clear, rich shade, good size and form. Each, 25c.

Sylvia. (Decorative.) Vermilion red, shading to flesh at base; large, perfect form, fine for cutting. Each, 25c.

Snow Crown. (Pompon.) White, small, very fine blossoms, borne profusely. Each, 25c.

Suzanne. (Cactus.) Rich salmon, very attractive. Each, 25c.

T. E. Boedelfino. (Show.) Bright reddish purple, dwarf, free flowering. Each, 25c.

Collection "30." Each one of the Dorothy Beautiful Dahlias, listed above, for $1.00, prepaid to any part of the U. S.

Collection "12." Any twelve Dorothy Beautiful Dahlias selection from above list, shipped prepaid for $3.25.

Collection "6." Any six Dorothy Beautiful Dahlias selection from above list, shipped prepaid for $1.75.

Culture. Start the tubers indoors in April, placing them in shallow boxes of dirt. These can be kept in a cellar or cool house until late May or early June when the plants should be transplanted outdoors. Plant in an open sunny situation. 3 x 3 feet is about the proper distance apart to plant. Prepare the soil thoroughly by digging. Be moderate in the use of both manure and water. Never plant when soil is wet. Lay the tuber flat on its side and cover it 4 inches deep to press the soil firmly on the tuber. Keep the soil loose and moist by frequent hoeing, drawing the soil to a slight hill around the plant. It is also advisable to use a mulch of straw or peat chips around the plants to keep the soil from drying out. It is not well to water the plants except just enough to insure the soil being moist.

After frost has killed the tops, dig the tubers carefully leaving 6 inches of the main stem on every clump, taking up with them all the soil which adheres to the roots. All clumps should be divided into several pieces before being reset each Spring. In doing this it is necessary to split the main stem, leaving a section of this on each tuber.

Delivery April to July first. Order early and start your plants indoors, as suggested above. Strong field grown clumps. See note, head of right column, regarding postage.
SUMMER FLOWERING BULBS.

Amaryllis.

There are a great many species of Amaryllis, all producing lily-like flowers but, in color varying from the richest crimson to pure white and in size from very delicate blossoms scarcely an inch in diameter to those which measure from six to nine inches.

Amaryllis South America. A robust and showy flower. The flowers are produced before the leaves appear. The bulbs are not hardy but they can be easily preserved during the winter in a dry cellar. Each, 10c, postpaid.

Amaryllis Belladonna Major. These throw up great clusters of beautiful, rose white flowers. They should be planted in well-drained soil, the top being about two inches below the surface. Surround and cover the bulb with sand so as to have some winter protection. Each, 25c, postpaid.

Amaryllis Spatharum. Produces in early spring attractive green foliage, which grows until July, when it withers off and apparently dies, but about a month later as if by magic the flower stalks spring from the ground to a height of two or three feet, bearing an umbel of large and beautiful, lily-shaped flowers 3 to 4 inches across and 8 to 12 in number, of a delicate lilac pink shaded with clear blue. Perfectly hardy. Each, 35c, postpaid.

Amaryllis H’Bicolour. A bulbous plant, the immemorial-shaped flowers, usually 6 to 8 inches across, are borne on strong, fleshy stems. The flowers are rich, deep velvety crimson, each petal having a broad white stripe, contrasting beautifully with the deep red color. Each, 25c, postpaid.

Amaryllis Mixed Hybrids. Handsome, elegant, effective in bloom a long time, and in leaf during the season. Large, 25c; for 3 to 10c, postpaid.

Amaryllis Belladonna. Handsome flowers; very hardy. Each, 10c; 3 for 25c, postpaid.

Bessera Elegans. Coral Bells. Flower stems from one to two feet high, bearing loose umbel of rose-red or white flowers. A charming bouquet flower. Each, 5c; 3 for 10c, postpaid.

Caladium Esculentum. "Elephant’s Ear." A handsome plant of tropical aspect, becoming leaves sometimes a yard or more in expansion. Effective as a single plant on a lawn, or in groups; also useful for decorative effect near streams or ponds. Bulbs can be stored in sand and winter and kept from year to year. Large bulbs, 15c each; $1.50 per 100; extra large bulbs, each, 35c; $4.00, postpaid; by express, $5.00 per hundred; mammoth bulbs, each, 15c, postpaid.

Calla Longifolia. This is the true type of blameless beauty. Flowers are very large, rich deep golden yellow, often 4 to 5 inches across the mouth, leaves are spotted with white and flowers of this kind present a striking appearance. Each, 50c, postpaid.

Resembles Bessera Elegans in growth; the flowers, however, are cup-shaped, golden-yellow with black spots, and of nodding habit. Each, 5c; 50c, postpaid.

Gloxinia Giant Flowering Hybrids.

A charming summer flowering house plant of very easy culture. Should be given as much light as possible, but shaded from the direct rays of sun. Emperor Frederick. Red, with pure white border. Emperor Maximilian. White, with purple throat and spotted, beautifully streaked and spotted. Defiance. Rich crimson scarlet. Mt. Blanc. Pure white. Each, 10c; doz., 50c, postpaid. One of each of the four varieties, 50c, postpaid.

Hyacinthus Candicans. Summer Hyacinth.

A splendid array during August and September, growing three to five feet high, with masses of pure white flowers two feet in length. The bulbs throw up gigantic spikes of thimble-shaped white blossoms. Planted in the Spring they bloom August to October, strong bulbs producing two, three, and even four flower stems. Each, 15c; 3 for 25c; doz., 75c, postpaid.

Milla Biflora. Mexican Star Flower.

The beautiful flowers are pure waxy white, two inches in diameter, star-shaped and usually in pairs on long slender stems. The blossoms frequently last two weeks when cut and is a perfect gem. Each, 5c; doz., 50c, postpaid.

Montbretias.

Hardy border flowers, with elegant and gracefully branching Gloxinia-like flowers which are much prized for cutting during Summer. The colors vary from clear yellow to rich crimson, and the plants grow about 2 feet in height. Plant bulbs five inches deep. Most winter flowers we know of. Should be grown in groups and for a remarkably showy effect. From August to October, they are one mass of flowers, after spade of the flame-like beauties appearing. Postpaid at single and dozen prices.

California. Deep golden yellow. Each, 4c; doz., 15c.

Germania. Has large, perfect, bright, orange-colored flowers and they will bloom beautifully. Each, 4c.

Rayen d’Or. Deep yellow, spotted brown, very large. Each, 4c.

Rosa. Pure salmon rose. Each, 4c.

Speciosa. Dull salmon yellow. Each, 4c.

In the center, very distinct. Each, 4c.

Mixed Sorts. Each, 4c; doz., 15c.

Oxalis.

No bulb is so valuable for edging the borders of walks or flower beds as the beautiful flowering Oxalis. When planted three inches apart they produce an unending row of elegant foliage and pretty flowers; and as they bloom quickly after planting they furnish a most attractive border the whole season. The bulbs can be planted the first of May, or perhaps earlier, and will bloom the first of June. No flowers grow easier than these, as they usually succeed in all soils and situations. They are also charming when grown in pots and make a very attractive mass of little foliage and gay flowers. They can be planted in this way at any time during the Winter or Spring, and will bloom commencing at once.

Diepp. Pure white; very fine. Each, 5c; doz., 25c.

Lasandria. Fine rosy pink, beautiful cut foliage. Each, 10c; 100 for 50c, postpaid.

Tigridias.

Shell Flower.

Curious and beautiful shell-like flowers, flowering from July to October. The bulbs can be planted about the middle of May and taken up in October and kept over winter in dry sand. One of the most showy of all Summer bulbs, and blooms from mid-summer until frost, growing two feet high, with large wide-open trinocular blooms, four to six inches across. The colors and markings are very brilliant and peculiarly odd and attractive, and clumps of them in the border have a most gorgeous effect. It is difficult to name a flower of such unique and exquisitely beauty as a Tigridia, the superb spotting being so striking and handsome. Each, 5c; doz., 50c, postpaid.

Tuberoses.

Pure white, sweet scented flower; is one of the most popular of summer blooming plants. Mammoth Excelsior Dwarf Pearl. Extra selected, double full-flowered, by mail, each, 1c; four, 10c; doz., 50c, postpaid; by express at purchaser's expense, 10c. $1.00. We supply 25 and over at the hundred rate. First Size Bulbs. By mail, 3 for 10c; doz., 50c, postpaid; by express at purchaser's expense, 10c, $1.50.

Zephyranthes.

The Zephyr flowers, or Fairy Lilies, are gems of rare beauty; and when planted either in pots or the ground, they produce very beautiful Lily-like flowers nearly all Summer. When once they are grown, they are very hardy; for pot culture plant three or four in a 3 or 6 inch pot. They are very hardy for pot culture plant three or four in a 3 or 6 inch pot. For the garden, plant in spring and lift them in the Fall. They are attractive, and will bloom beautifully. Each, 10c; doz., 50c, postpaid.

Candida. Pure white and the most profuse bloomer of all. Each, 10c; doz., 50c, postpaid.
SELECT NORTHERN GROWN FIELD SEEDS

Prices quoted on Field Seeds are those in effect at the time this catalogue goes to press. We will maintain these prices as long as possible, but cannot guarantee them throughout the early season. All values are subject to market fluctuations and seed is offered, subject to prior sale. Order early before our stocks are exhausted. A complete assortment of all the various kinds of Seeds is mailed free, on request to any address.

Northrup, King & Co.'s Lincoln Oat

Drift 2½ bushels per acre. Sold only in Sealed Bags.

We believe the Lincoln to be as fine an oat as was ever introduced for growing in the Northwest. We make this claim after twenty years, during which time it has been grown by thousands of farmers over a wide territory and under various conditions of soil and climate. We introduced this Oat in 1883. It was a fine Oat then; it is even better to-day. Our sales have steadily increased from year to year, until now it is difficult to supply the immense demand. Why has it become so popular? Because of the reputation it has attained people will have it, and insist on genuine seed which is put up in sealed bags only.

Earliness. This is not the earliest Oat, as its size and heavy yield cannot be attained in the shortest period, but it matures only a few days after the small, early Oats and gives a yield and a quality which will please the most exacting grower.

Adaptability. Our Lincoln Oats are grown in the Northwest and are well acclimated to the extreme weather conditions which exist here both in Spring and Summer. Oats that will grow and thrive and produce big yields in the Northwest, will do well most anywhere, and under most oil conditions.

Straw. A most essential point in successful Oat growing is to have a variety with stiff, strong, heavy straw. The Lincoln Oat is especially valuable in this respect. It stands up under heavy winds and rarely, if ever, does it lodge. Even on rich soil it gives the best satisfactory results. Another characteristic of the Lincoln Oat is its remarkable standing propensities, which accounts for part of the heavy yield. On account of its strong, robust, healthy growth it resists rust when other sorts are greatly damaged by this disease. No Oat is entirely rust-proof, but we believe the Lincoln to be as nearly free from rust as any Oat can be. Lincoln Oats have a spreading or sprang top head.

Quality. The Lincoln Oat has a thin hull, a heavy meat and soft nub. Whether for home consumption or for market, these points of merit go a long way towards deciding the value of your crop. In addition, the color is a fine white, bright and clean. Such Oats usually grade higher on the market than others and a cent or two per bushel on the crop will more than pay the extra cost of seed, to say nothing of the extra yield which may be secured; and the desirability of keeping the land free from weeds.

Yield. We know of no variety which has given as large average yield as the Lincoln, averaging 20 to 60 bushels more per acre than home grown Oats.

Price of Lincoln Oats. 1 lb., postpaid, 20c; 1/4 bu., 45c; bu. of 32 lbs., $1.15; 3 bu. @ $1.00; 10 bu. @ $1.00; 100 bu. @ 90c. Sacks each, 15c extra.

The above set of abbreviated words conveys the information that the trade mark in connection with which it is used, has been "Registered in the United States Patent Office." As we were first to use the Lincoln as a trade mark for a certain kind of Oats and have continually used it for twenty years, the United States Patent Office has registered this trade mark and gives us exclusive use of same. It is contrary to law for any firm or individual to use our trade mark without our permission. Every bag of Lincoln Oats which we send out will have in addition to the name, the mark, "Reg. U. S. Pat. Off." No other Oats are genuine. Buy Lincoln Oats, either from us, or from those who you can certain obtained their seed from us.

Caution. Do not be satisfied with common, ordinary Oats, such as can be bought at any Feed Store, when for the slightest additional cost of the seed you can secure our Lincoln Oats. The inner quality and larger yield obtainable by sowing our Oats will many times repay the difference in price. The only safe plan is to buy your seed from us or from those who can show proof of having obtained their seed direct from us. Northrup, King & Co.'s Lincoln Oats are sold only in sealed bags, each bearing our name and trade mark, as shown in illustration. None other are genuine. Don't be imposed upon. You can get our Lincoln Oats if you want them, either from dealers selling our seed, or from us direct; providing of course that our stock is not sold out.

Our Sterling Seal is placed on the top of every bag containing Sterling Seed, both for the guidance of the buyer and to prevent substitution. If seal is perfect and the cord unbroken, it is assurance that the bag contains the best seed to be obtained anywhere at any price.

Every bag of genuine Lincoln Oats shows the registered trade mark.
Northrup, King & Co., Seedsmen, Minneapolis, Minn.

OATS

Drill 2 to 2½ measured bushels per acre.

Northrup, King & Co.'s Northland Brand Oats. The greatest value for uniformly superior quality, carefully selected for fine color and plumpness. The Northland oats are on every bag.

The past season has been exceptionally favorable for Oats, and we doubt if you will ever have a better opportunity than the present to obtain high quality seed Oats at a moderate price. If your Oats are run out and yielding poorly, you should by all means get rid of the scrub stock and change your seed.

We especially recommend our Northland Brand Oats to growers who wish to seed a large acreage but who do not care to plant any of our special varieties.

Northland Brand Oats are splendid, heavy white Oats which we believe will give good satisfaction under favorable conditions. The grains are plump and medium pointed, quality good. These Oats are medium early, are grown to a large extent in Minnesota and by breeders in the Dakotas. They do very well on ordinary soil. On rich, heavy land they grow so rank, the straw not being large in proportion to its weight, that they are much inclined to lodge. lodge, lodge, lodge...

Big Four Oats. These are very handsome and heavy white Oats of great productivity, and have become very popular in many sections of Iowa and Minnesota and by breeders in the Dakotas. They have been reported by breeders as the best Oats for the past season. The past season has been very favorable for Oats and we offer stock which is of good appearance and which under favorable circumstances will give an excellent yield of good quality. Price, lb. 30c, post-paid; by express or freight, ½ bu., 35c; bu., $1.00; 3 bu., 90c; 10 bu., @ $1.10. Bags each, 15c extra.

Regenerated Swedish Oats. (Canadian Grown) In America, both this year and last, we have secured a limited quantity of Swedish Grown Regenerated Swedish Oats. These were originally quite a late variety, made early by growing in the high altitude in which they were developed. They are an improved strain of Swedish Oats we have offered for several years.

The Regenerated Swedish Oats are medium early, and under ordinary growing conditions, a yield of fifty to seventy-five bushels is quite common.

The quality of the strain is superior to the Swedish kernels being more plump, and very heavy, usually weighing about 44 lbs. to the measured bushel. We recommend sowing 2 to 3 bushels, depending upon the richness of the soil. These Oats should do remarkably well on rich land providing a thoroughly worked seed bed is prepared and a uniform sowing is made.

Price, ½ bu., 43c; bu., $1.27; 3 bu., @ $1.45; 10 bu., @ $1.75; 100 bu., @ $1.95. Bags each, 15c extra.

Swedish Oats. Regenerated Swedish Oats, our regular Swedish Oats, have given such general satisfaction that we know many will still adhere to this favorite. For the benefit of these we have secured seed which is of the usual high standard. At the Wisconsin Experiment Station it has stood at the head of the most recent years, having been distributed by that station as Wisconsin No. 4. Prof. Moore of Wisconsin, says, "Probably the best American Oat." Prof. Shepard of the South Dakota Station says, "They are the best drought resistant of all our new plants."

Abundance Oats. A superior white variety, largely grown in England and Canada. They are early and for this reason, frequently make a crop when other varieties fail or are damaged by weather. The yield is unusually large, growing ordinary varieties from 15 to 25 per cent. The straw is stiff and strong. The roots are extensive, making the plants harder and more drought resistant. We offer Canadian grown seed, heavy and of extra fine quality. Price, ½ bu., 40c; bu., 10c; 3 bu., @ $1.15; 10 bu., @ $1.45. Bags each, 15c extra.

Banner Oats. This variety has been held in high esteem for many years, especially in Canada where it is well known. The seed is quite heavy, weighing up to 45 lbs. per measured bushel.

The chief claim of the Banner Oat to distinction is its earliness, productivity and uniformity of ripening. It will be noted that most Oats that when the great body of them is ripe there are many small and immature Oats which do not fit out and which disappear over the tall board in cleaning and are therefore waste. The superiority of the Banner Oat in this particular is very marked.

The straw is stiff, free from rust and of good color, kernels long and hard, making an Oat of fine feeding quality. Price, ½ bu., 55c; bu., $1.10; 3 bu., @ $1.30; 3 bu., @ $1.50; 10 bu., @ $1.90; 100 bu., @ $2.15. Bags each, 15c extra.

Black Beauty Oats. At the present time but few black Oats are grown in America, Canada has found how good they are and is now growing them very largely. They have been grown quite largely in European countries.

They are preferred by those who have used them on account of their superior yielding quality and the unmixed stiffness and strength of straw.

Black Beauty Oats are the best of all Oats. They are early, the straw is exceedingly strong and vigorous and the head is extremely long.

Note—All prices on grain are subject to market changes.

Black Beauty Oats.
OATS

Victory Oats.

Progressive farmers everywhere are looking for a chance to make money. These are the men who wish the big state fairs, and are reading, studying and constantly thinking about improved farm methods.

To meet these, who realize the profit that can be made by a good stock, improved machinery and big crops, we recommend our Victory Oats as a big, generous yielding, drought-resistant variety. Victory Oats originated in Sweden and they seem to be adapted to the growing conditions of the Great Northwest better than any other of the improved foreign sorts.

These Oats are heavy and show 80c. per 100 bu., 100 bu. @ $1.00; 100 bu. @ 95c. Bags each, 15c extra.

Improved White Russian Oats.

This is quite distinct from most other varieties, being a side of a white Russian. It has a well established fact that the true White Russian is a nearly rust proof variety. Any Oat can well be. It is a good yielder and quite hardy. It is especially recommended for the most unfavorable weather.

Sixty Day Oats. The seed of this valuable Oat was secured in Montana by the United States Department of Agriculture in 1901. Some was sent by the Government to the South Dakota Experiment Station. With only two exceptions, every farmer to whom we have sold this variety, has been pleased with it. It is similar to the Kherson Oat, which has been a marked success in Montana, but it is adapted to a section somewhat farther north than that variety. In North Dakota the Sixty Day Oat has headed the list of varieties under trial for the last three years. It is a small yellowish Oat that weighs about 24 pounds a bushel, the hull is very thin.

The Sixty Day Oat has made a fair crop when other varieties failed entirely. It is so early that it may be harvested with barley, and is three weeks ahead of most other sorts. The average yield of Sixty Day Oats at the Minnesota Experiment Station has been 64 bushels an acre. This is not a side oat. Price, 10c., postpaid; bags each, 15c extra.

Montana Wonder Oat. This strain of wonderfully productive Oats was given for us in Montana where it is in great favor. We have distributed this variety in many localities in Minnesota, Wisconsin and the Dakotas. From the day we opened up every report we have received is highly commendatory. The yield is very large, exceeding many of the well-known varieties when grown in the same locality. The straw grows tall and is stiff and strong and does not readily lodge. The Oats are borne in long, loose heads and are white and clean. They mature medium early, about a week or ten days after the extra sorts. Price, 10c., postpaid; bag, 15c extra. Bags each, 15c extra.

Silver Mine Oats. This Oat has a reputation as an exceedingly heavy and reliable yielding. It is very hardy and prolific and yields beautiful white kernels, which are especially desirable for the manufacture of rolled oats.

The heads are very large in proportion to the straw, bright, clean straw. The sprangle top, being long, are borne low down on the stalk which seems to prevent lodging. With this variety last season, exhausted our supply and we suggest early orders to avoid disappointment. Price, 10c., postpaid; bag, 15c extra. Bags each, 15c extra.

Price Subject to Change. All prices on grass and field seeds are subject to market changes. This price is being compiled Nov. 15th so some items are necessarily estimated and are subject to later revision.

Victory Oats.

Scottish Chief.

The original stock of these Oats was imported from the Highlands of Scotland. They have given splendid results here, in the North-east, giving big yields of fine quality.

These Oats are very heavy and average about 49 to 50 lbs. per measured bushel while the grain is extra large and plump. If you wish to raise big white Oats that will grade high on the market, you will be pleased with Scottish Chief Oats. Also the straw is strong and stiff, holding up well and withstanding quite heavy winds.

It readily adapts itself to change of soil and climate and is a good drought resistant. Price, 10c., postpaid; 1/2 bu., 40c; bu. of 32 lbs., $1.05; 3 bu. @ 55c; 10 bu. @ 90c. Bags each, 15c extra.

Minnesota No. 281 and Minn. No. 295 Oats.

Prof. Hull of the Minnesota Experiment Station writes us: "Our trials here show No. 281 yields more an acre and has a thinner hull than No. 295. The character of the berry is inclined to be long and plump while that of No. 295 is the short, plump, potato type. Minnesota No. 295 also seems to resist lodging better than Minnesota No. 281."

The average yield during 14 years at the Minnesota Experiment Station of the No. 295 Oat is 60.3 bu. of the No. 281 Oat, 63.1 bu. Both these Oats have spreading panicles. Prices on Minnesota No. 281, 1/2 bu., 55c; bu. of 32 lbs., $1.05; 3 bu. 40c; 10 bu. @ $1.50. Bags each, 15c extra.

Prices on Minnesota No. 295, 1/2 bu., 55c; bu. of 32 lbs., $1.05; 3 bu. 40c; 10 bu. @ $1.50. Bags each, 15c extra.
SEED FLAX

All prices on this page are subject to market changes.

Culture. Flax should not be sown on same land oftener than once in five years. The next season after flax has been grown on the land, it should be plowed under. Winter wheat, rye, barley, oats, and beans are the best crops to follow flax. Flax should not be sown on land that was grown on with grasses, clover, or lupine the preceding year. There are no open spaces in the bottom of the furrows as these are likely to cause the roots to rot. sow 22 to 25 pounds per acre; sow as early as possible and yet avoid the last killing frost. In the southern counties of Minnesota June 16th to June 20th has been recommended as the best average time, although this will depend largely upon the season.

Minnesota No. 25 or Primost. This is a pure bred Flax. It will sMSectile from many varieties sent by U.S. Dept. of Agriculture to the Minnesota Experiment Station. Here tests were conducted for many years and this variety proved by far the most promising. It showed an average yield of 19.3 bu. per acre for 2 years. This was 3.4 bu. more than the average of three commercial varieties. There can hardly be a doubt that this is the champion variety of the Northwest. A few years ago seed was sent to a number of Minnesota farmers by the Experiment Station to test the Flax under ordinary farm conditions. The average yield per acre was 16 bu. which was 3.1 bu. more than common Flax or an increased yield of 26 per cent.

We have to offer this season a few carloads of very fine Minnesota No. 25 or Primost Flax. The supply of this particular lot of seed is not nearly sufficient to cover the demand we will have for it and for that reason urge early orders if you desire to obtain some of this desirable Flax.

The following quotation from a letter received from one of our customers calls attention to the extreme earliness of this Flax, a feature equal in importance to its yield:

"This No. 25 Flax is fully ten days earlier than any other Flax. This ten days means a great deal to the flax growers of North Dakota. In former seasons I have lost my entire crop when if had had this Flax it could easily have been saved. I regard this No. 25 Flax as being of inestimable value to the farmers of the Northwest.

This valuable Flax is also wilt-resistant to a very considerable extent. Price, lb., postpaid: 15 bu. 90c; bu. $2.90; 25 bu. @ $2.70; 50 bu. @ $2.65. Seamless cotton grain bags holding 25 lb. bushels, each, 26c extra. Write for social prices on large lots.

N. D. No. 52 Wilt Resistant Flax. Flax seed which is resistant to wilt has been bred by continually growing flax on wilt-susceptible land. Those plants which survive produce seed which is more resistant to the disease than the previous generation. Repeated sowing of each crop on the same land will in time produce seed which is practically immune to the effect of Wilt.

The N. D. No. 52 Flax which we offer was grown in North Dakota by a farmer who selected his original stock seed, from the North Dakota Agricultural College. He states that he could raise No Flax on his land until he got this seed. During the dry season of 1913 under varying conditions he secured a good crop, averaging over 40 bu. per acre. Under ordinary conditions the yield should be much greater. N. D. Press Bulletin No. 57 states, "Wilt Resistant seed is now contained in this department of the College, and by its use the combining number of Flax, or even better, on old wilt-susceptible lands, previously long inclined to flax wilt, can be materially reduced by using seed which is wilt resistant against wilt. Flax is almost as long as the seed is properly handled." Price, lb., 20c; postpaid: 15 bu. 90c; bu. $2.80; 25 bu. @ $2.65; 50 bu. @ $2.60; 10 bu. @ $2.65. Seamless cotton grain bags holding 25 lb. bushels, each, 26c extra. F. O. B. Minneapolis.

BUCKWHEAT

Seeding. Sow 1 to 1 1/2 bushels per acre, as late as possible and still have crop well developed before severe frosts occur. Light, well-drained soils are best for this crop.

Japanese Buckwheat. Entirely distinct from all other Buckwheats. It has the advantage of remaining for some time in bloom and produces seed earlier. On this account it can be grown farther north. It resists drought and blight very well. The seed is rich brown in color and larger than Silver Hull. As much as forty bushels per acre have been obtained in one season. It is a variety making it very profitable to raise. Buckwheat is now sold at 50 lbs. to the bushel. Price, 100 lb. 90c; 55c; 25 lb. @ $1.40; 10 lb. @ $1.35. Seamless cotton grain bags holding 25 lb. bushels, each, 20c extra.

Silver Hull Buckwheat. This valuable variety originated in Japan and is a decided improvement on the old black or gray sort. It is early, remains longer in bloom than other sorts. A fine variety for honey bees. The grain is of a dull gray color, less than half as large as the white buckwheat. It is much better for feed, market, and cooking purposes than the white buckwheat. Buckwheat makes a market crop in regions with a more ready sale, bringing higher prices than the Japanese. Under favorable conditions it will yield 40 to 50 bushels an acre. Price, 1/2 bu. 55c; 1 bu. 85c; 2 1/2 bu. @ $1.40; 10 bu. @ $1.35. Seamless cotton grain bags holding 25 lb. bushels, each, 20c extra.

RYE

Spring Rye. True Stock. Spring Rye makes an excellent crop where winter grain has been killed out, or for sowing where a fall crop has not been planted. If desired it can be turned under and made to answer a good purpose in adding to the fertility of the soil, sow seed same time as other spring grain. Does not grow quite so large straw as Winter Rye, but usually yields well and grain is of fine quality. We call particular attention to the fact that we offer genuine Spring Rye. Many have been disappointed in receiving Winter Rye as a spring variety, and wish to emphasize the fact that we sell the genuine Spring Rye, sown in the spring and harvested the same season. We now offer an extra fine grade. To insure receiving enough for your requirements we advise placing your order early, as we have only a limited quantity. Sow about 1 1/2 bu. per acre. Price, 15 bu. 60c; 60 bu. @ $1.40; 25 bu. @ $1.75; 10 bu. @ $1.60. Seamless cotton grain bags holding 25 lb. bushels, each, 20c extra.

Northrup, King & Co.'s Amber Winter Rye. (Sold only in sealed bags.) Amber Winter Rye is much harder than wheat and can be grown on a greater variety of soils. It will thrive in dry seasons and on light sandy loam. It is grown for grain, for feed, and for hops and green manure. Sow Aug. 20th to Sept. 15th—1 1/2 bu. per acre for grain, and 1/2 to 2 bu. per acre for Fall pasture. If drilled 2 to 3 bu. per acre, there will be less danger of winterkill. Price, lb., 20c; postpaid: 15 bu. 60c; 60 bu. @ $1.60; 25 bu. @ $1.50; 10 bu. @ $1.45. Seamless cotton grain bags holding 25 lb. bushels, each, 20c extra.

All prices on grain and field seeds are subject to market changes.

A Field of Buckwheat in Bloom. Fine for Bees.
MARQUIS WHEAT.

 Pronounced by Both Farmers and Millers the Finest Wheat for the Northwestern Spring Wheat Territory.

Origin. Marquis Wheat was originated by Doctors Chas. and Wm. Saunders of the Central Experiment Station, Ottawa, Canada, by crossing the Red Fife and the Hard Calcutta, a native Wheat of India, which had become acclimated to northern conditions. The first experiments were conducted in 1886, and it was not until 1903 that it was fully developed. By scientific cross breeding, a variety was produced that inherited the remarkable earliness of the Calcutta, and the frost-resistant and yielding qualities of the Red Fife. The original stock of seed was very small, but by careful husbandry the crop has increased so that it is now grown in all the wheat regions of the United States and Canada, and its popularity is increasing. As a result, the hardiness of this variety has been greatly increased, and it is now widely grown in the northern United States and Canada as well as in the southern states.

A Prize Winner. Marquis Wheat won the One Thousand Dollar prize offered by Sir Thos. Shanghress for the best wheat in America, at the New York Grain Exposition in 1911. It also won the Third Thousand Dollar prize at the International Dry Farming Congress held at Lethbridge, Alberta, in 1912, in a competition open to the whole world. Marquis Wheat was again successful in winning the Sweepstakes prize at the Dry Farming Congress held at Tulsa, Oklahoma in 1913. During seasons 1914 and 1915 this variety won more prizes and blue ribbons than any other Wheat exhibited at national, state and county fairs.

Earliness. Marquis Wheat is from one week to ten days earlier than Red Fife and this fact alone should induce many of our customers to grow it this Spring. Read what Mr. Jas. Austin says about earliness and what it means to the Wheat grower at a time when rust, smut, drought or hot winds may take his crop at any time. This week or ten days may save his entire crop from loss.

Productiveness. Marquis Wheat has out-yielded all other Spring Wheetes grown under the same conditions and in the same district. The increased yield varies from 5 to 10 bushels per acre. Thrashing reports from the three, five, hard Spring Wheat states this past season indicate the same favorable increase over Marquis Wheat; other varieties, as has been the case every year since Marquis was introduced.

Quality. Marquis Wheat has, by numerous milling tests, shown a higher percentage of gluten, a better color, greater absorption and heavy weight per bushel of grain. The high gluten content of Marquis Wheat makes it superior for the farmer and miller, and its growth should be encouraged by everyone interested in the production of good grain. Mr. Geo. A. Saunders, Engineer of the Canadian Milling Co., said: "Reaping as to our foundation and opinion of Marquis Wheat, we have been most interested in this new variety. Have made many milling and testing reports on its quality and collected information as we could as to its adaptability to the Northwest. From our tests and observations we believe the Marquis Wheat shows the highest milling qualities of any Wheat ever raised in the northwestern Spring Wheat territory. Furthermore, it appears to yield a quality of flour better than 13.5 or 15.5, to say nothing of ten days earlier and therefore with better resistance to rust, smut and blight. We believe your effort to increase the distribution of Marquis Wheat will prove beneficial both to the farmer and miller. We are recommending it very strongly in our North Dakota territory and doing all we can to increase its distribution. All the tests and reports indicate that Marquis Wheat will produce a flour of quality superior to the Fife and Blue Stem varieties now raised in the Northwest. H. S. Helm, General Mgr."

Price. We know of no variety of Wheat which has sprung so quickly into popular favor with the bread interest as Marquis Wheat. Considering the increased yield, finer quality and earliness of Marquis Wheat, the best course of the seed is returned many times over in the additional value which may be secured for the crop. Our prices are F. O. B. Minneapolis:

- 10 bu., $1.50; 20 bu., $1.45; 35 bu., $1.40; 75 bu., $1.35; 100 bu., $1.30; 150 bu., $1.25; 200 bu., $1.20; 250 bu., $1.15; 300 bu., $1.10; 400 bu., $1.05; 500 bu., $1.00; 600 bu., $0.95; 700 bu., $0.90; 800 bu., $0.85; 900 bu., $0.80; 1,000 bu., $0.75; 2,000 bu., $0.70 extra.

Northrup, King & Co., Seedsmen, Minneapolis, Minn.
Harvesting Minnesota No. 169 Wheat in Minnesota.

**SOW WHEAT PEDIGREE STOCK**

Sow about 1½ bushels per acre.

Northrup, King & Co.'s Northland Brand Red Fife Spring Wheat. This variety of Wheat has been selected, bred and grown by us and has attained such high quality that we feel it is justly entitled to be called "Northland's Finest." All who see this Wheat, both the grain and while growing, compliment us on its superior looks and fine appearance. It is as nearly pure as Wheat can be and by cross breeding we have produced a healthy strain, which grows far in increasing the yield and reducing the damage by bugs and other enemies. This is the variety which furnishes Nos. 1 Hard Wheat. It is the best selected stock of the Wheat which has made Minneapolis famous all over the world, and is undoubtedly the finest stock of the finest milling Wheat in existence. This is a hardy variety. The kernels are hard and flinty and make the very best grade of flour. We receive a great many letters every year, similar to the one below, confirming all the claims we make for this Wheat.

The Best Variety for this Locality.

Last season I planted on my farm 20 bushels of your Red Fife Spring Wheat. I am so pleased with the results which I am now planning to buy another 20 bushels of this same Wheat. I have been pleased with the results from a small planting the past few years, the one out sent by the Station as Minnesota No. 163 Wheat for the past 13 years has been 28.4 bushels an acre. This is a very hardy variety. It is one of the best varieties of the kind. The Station's report for the past few years shows us with a very high yield. We have planted the Wheat and find the results very good. We are very pleased with the variety. It is as nearly pure as Wheat can be and by cross breeding we have produced a healthy strain, which grows far in increasing the yield and reducing the damage by bugs and other enemies. This is the variety which furnishes Nos. 1 Hard Wheat. It is the best selected stock of the Wheat which has made Minneapolis famous all over the world, and is undoubtedly the finest stock of the finest milling Wheat in existence. This is a hardy variety. The kernels are hard and flinty and make the very best grade of flour. We receive a great many letters every year, similar to the one below, confirming all the claims we make for this Wheat.

Northrup, King & Co.'s Northland Brand Blue Stem Wheat. Our location here on this, the largest farm in the world, places us in a position to select many carloads of fine Blue Stem Wheat which when graded and purifed in our special machinery, makes good seed for seedling large areas. When a change of seed is desired and the buyer does not wish to invest in our selected seed Wheat, this fancy Blue Stem will give profitable returns. We believe it to be as clean and pure as any Wheat can be which has not been especially grown for seed, and is much better than some that is so offered. Price 10 bu., 30 c; 25 bu., $1.75; 50 bu., $1.00. Seamless cotton grain bags holding 25 bushels, each, 20c extra.

**Velvet Chaff Wheat.** This is a bearded, smooth-chaffed variety, very hardy and a big yielder. It is one of the best varieties of the kind. The Station's report for the past few years shows us with a very good yield. We have planted the Wheat and find the results very good. We are very pleased with the variety. It is as nearly pure as Wheat can be and by cross breeding we have produced a healthy strain, which grows far in increasing the yield and reducing the damage by bugs and other enemies. This is the variety which furnishes Nos. 1 Hard Wheat. It is the best selected stock of the Wheat which has made Minneapolis famous all over the world, and is undoubtedly the finest stock of the finest milling Wheat in existence. This is a hardy variety. The kernels are hard and flinty and make the very best grade of flour. We receive a great many letters every year, similar to the one below, confirming all the claims we make for this Wheat.

Northrup, King & Co.'s Northland Brand Blue Stem Wheat. Our location here on this, the largest farm in the world, places us in a position to select many carloads of fine Blue Stem Wheat which when graded and purifed in our special machinery, makes good seed for seedling large areas. When a change of seed is desired and the buyer does not wish to invest in our selected seed Wheat, this fancy Blue Stem will give profitable returns. We believe it to be as clean and pure as any Wheat can be which has not been especially grown for seed, and is much better than some that is so offered. Price 10 bu., 30 c; 25 bu., $1.75; 50 bu., $1.00. Seamless cotton grain bags holding 25 bushels, each, 20c extra.

**Macaroni or Durum Wheat.** Sent out by the United States Department of Agriculture under strong recommendation as to its great value for semiarid lands where good crops of Spring Wheat could not ordinarily be produced, has more than justified every claim made for it. The acreage of this variety is increasing every year in spite of the opposition of some millers. It out-yields by far any other variety of Spring Wheat, and has been demonstrated that it makes bread superior to that made from the best Fife Wheat flour, and has proved to be practically immune to the dreaded rust. In growing it resists extremes of weather, which no other Wheat will endure. It is now being received in the Minneapolis market (the largest Wheat receiving market in the world) and sells equally as well as Hard Spring Wheat and in some cases commands a premium.

In the field, this Wheat grows very strong and with surprising rapidity, so rapidly as to get well ahead of the weeds. It does not shell or bleach and is also hail proof owing to the thickness of the hull. The straw is very strong. Price, 10 bu., 30 c; 25 bu., $1.75. Seamless cotton grain bags holding 25 bushels, each, 20c extra.

**WINTER WHEAT.**

Northrup, King & Co.'s Minnesota Reliable Winter Wheat. (Sold only in Sealed Bales). The yield of Winter Wheat on an acre is on the average very much larger than any of the Spring Wheat. Winter Wheat has not been extensively grown in Minnesota and the Dakotas until recent years, on account of its inability to withstand the severe tests to which it has been put, including unfavorable weather during Fall and Spring months. Minnesota Reliable Winter Wheat is very early, ripening before rust, blight, chinch bugs or other insect pests appear. It yields from 30 to 60 bushels an acre and sometimes more on good soils. In quality, it equals the well known No. 1 Hard Fife Spring Wheat and commands a premium from millers.

It is a bearded variety; the kernels are red with a very thin husk, hard, flinty and very rich in gluten. It is still-strawed and will stand up against the wind and rain, and would stand well in the uplands which would not produce other varieties so well.

Price, for fall delivery, 10 bu., 45 c; 25 bu., $1.90; 50 bu., $3.00. Seamless cotton grain bags holding 25 bushels, each, 20c extra.

**Turkey Red Winter Wheat.** A standard, red bearded Wheat of medium size with very strong straw. Price, for fall delivery, 10 bu., 45 c; 25 bu., $1.90; 50 bu., $3.00. Seamless cotton grain bags holding 25 bushels, each, 20c extra.

All prices on grass and field seed subject to market changes. See latest Red Figure Price List for current values.
**BARLEY**

**Prices subject to market changes. See latest Red Figure Price list for present values.**

**CULTURE.** Since barley is a shallow rooted crop, the soil should be made very fine and firm, with plenty of available plant food. If the soil is not fertile, you should enrich it some time before seeding, preferably by the use of composted fertilizer. Sowing the Seed. Early seeding usually produces the best yields. However, barley is a crop that often succeeds when sowed about corn planting time. Use a drill, planting the seed about two inches deep. Two bushels of seed per acre is the amount usually sown. Barley makes an excellent crop to follow corn that has been grown on clover sod. When thus sown, disk ground before plowing and again immediately after. This will prevent the formation of cloots in the soil and make a good seed bed. Roll and harrow after seeding if the soil is loose.

Prices. On account of the low price of barley this season, all growers should take advantage of the opportunity to change seed, remembering that grain grown from good seed commands a higher market price.

Northrup, King & Co.'s Northland Brand Six Rowed Barley. The greatest value price, of uniformly superior quality, carefully selected for high purity and strong germination. The Northland Goose is very hardy.

The splendid Barley crop this year offers you an unusual opportunity to change your seed and obtain superior seed barley at low cost.

The U. S. Dept. of Agriculture advises farmers in Bulletin No. 443 as follows: "The seed is a vital factor in the production of good barley, for it contains the germ and food material to start either a strong and vigorous plant or a weak and puny one. If the seed is small and shriveled maximum yields cannot be expected." Bearing this in mind, we have taken great pains to select extra good seed barley to start with, and then clean it thoroughly by special machinery so it will be of superior quality. We recommend it strongly as a good yielder under favorable conditions. 14 bu.; 40c; $1.15; 2 bu., sufficient for one acre, $1.40; 10 bu., $6.95; 100 bu., $9.55. Seamless cotton grain bags holding 21/2 bu., each, 20c extra. Write for carload prices.

**Oderbrucker or Wisconsin No. 55 Barley.** On account of barley being one of the staple crops, the State Experiment Station of Wisconsin has given particular attention to the breeding of barley to obtain big yields, protein content and other qualities which are essential for both brewing and feeding purposes. Oderbrucker or Wisconsin No. 55 is considered the best variety of barley sent out by the Wisconsin Station. Prof. Moore declares it to be superior to the Manshury, yielding 5 to 10 bushels more an acre. Oderbrucker is a stiff-strawed, heavy yielding, six-rowed, bearded variety. It is about the same as Manshury in time of maturity, manner of growth and general appearance, but has a plumper kernel and weighs more to the measured bushel. Prof. Moore says: "In stiffness of straw and rust resistance it is superior to any other variety on test." Lb., postpaid, 25c; by express or freight at purchaser's expense, 1/4 bu., 50c; bu., $1.35; 2 bu., sufficient for one acre, @ $1.25; 10 bu., @ $1.20. Seamless cotton grain bags, holding 21/2 bu., each, 20c extra.

**Chevalier Barley.** This is a two-rowed variety which is very popular with many farmers. The grain commands a high price on account of its fine appearance and superior malting qualities. The heads are a little longer than the six-rowed varieties and the berry is larger. Many Canadian farmers prefer this variety on that account. Lb., postpaid, 25c; by express or freight at purchaser's expense, 1/4 bu., 50c; bu., $1.40; 2 bu., sufficient for one acre, @ $1.25; 10 bu., @ $1.20. Seamless cotton grain bags, holding 21/2 bu., each, 20c extra.

**Highland Chief Barley.** This is also a two-rowed variety of very fine quality. Several years ago we sent a sample of this Barley to one of the largest malting firms in the United States, and they wrote us that during an experience of sixty years they had never seen such a handsome sample of barley. It is a vigorous grower and the grain is much larger than the six-rowed varieties. It is less likely to be damaged by rain than most other kinds, as it is much more closely covered with broad awns or spikelets. Lb., postpaid, 25c; by express or freight at purchaser's expense, 1/4 bu., 50c; bu., $1.25; 2 bu., sufficient for one acre, @ $1.35; 10 bu., @ $1.20. Seamless cotton grain bags, holding 21/2 bu., each, 20c extra.

All prices on grass and field seeds subject to market changes.
Improv: White Hulless Barley

Its Valuable Properties.

IT IS HULLESS; IT IS BEARDLESS; IT IS VERY EARLY
IT WEIGHS OVER 60 POUNDS TO THE MEASURED BUSHEL
IT YIELDS WELL ON POOR LAND
IT YIELDS ENORMOUSLY ON GOOD LAND
IT MAKES BETTER PORK THAN CORN
WHEN CUT GREEN, IT MAKES GOOD HAY
IT IS OF INESTIMATE VALUE TO STOCK FEEDERS.

No barley of which we have knowledge has proved so valuable to the stock raiser as the Improved White Hulless. It is not a malting variety, but for feeding purposes there is no barley raised which can compare with it in earliness, yield and quality. It has many very valuable properties. While it has sufficient hull to hold it in the head, these hulls are readily separable in threshing. The absence of beards makes it safe to feed to all kinds of stock. Its earliness is a characteristic which is especially desirable. It will mature in from 60 to 90 days, according to soil and locality. In Montana the farmers use it very extensively as a catch crop. Those seasons in which wheat failed on account of drought, insects or disease, White Hulless Barley was sown in June and had ample opportunity to mature, provided there was sufficient moisture in the ground to start germination.

The grain is exceedingly heavy, weighing from 60 to 65 pounds to the measured bushel. The yield varies according to soil and climatic conditions, but it can be depended upon to produce from 35 to 80 bushels an acre. Its nutritive value is very great. It is fed to work-horses at the rate of 2 quarts where 4 quarts of oats would be required. The best way is to mix it with oats and grind the two together for horse feed. It is also very valuable for feeding poultry, pigs and all kinds of stock. As fattening feed for hogs it has no equal. It makes sweeter meat and nicer feed by far than corn.

It is often grown for hay, coming very early and providing rich feed. It should be cut just before it becomes ripe and while the straw is green. In this condition it is relished by all kinds of stock. The straw is stiff and straight, and seldom if ever does it lodge.

SPEL TZ OR EM M ER

FACTS ABOUT SPELTZ.

IT RESISTS DROUGHT
IT THRIVES ON POOR LANDS, IN STONY GROUND IN FOREST REGIONS, ON THE PRAIRIES IT MAKES A CROP WITH ALMOST ANY CONDITION OF SOIL AND CLIMATE ENDURES A GREAT DEAL OF FROST IS NOT READILY DAMAGED BY HARVEST RAINS IS NOT SUSCEPTIBLE TO RUST OR SMUTS YIELDS MORE THAN OATS, WHEAT OR BARLEY MAKES BETTER FEED THAN BARLEY MAKES EXCELLENT FLOUR STOCK EAT BOTH GRAIN AND STRAW RIPENS VERY EARLY

Speltz has now been grown in the United States in a large way for several years and each succeeding season not only emphasizes its value, but lessens its production increasing to an enormous extent. It is found to be adapted to a wide range of soil and climate, to resist extremes of weather, to be of excellent feeding value and so yield so much more heavily than oats and barley as to insure its increasing popularity and its eventual place among the leading and standard cereal crops of the world. Those who have not grown Speltz should not let another season go by without giving it a place and an important place, too, on their farms. It is readily eaten by all kinds of stock and has shown itself to be especially adapted when fed to milch cows. It is better to mix it, however, with bran and shorts as it is a pretty heavy feed when fed alone. As a swine feed it is very well of if indeed, especially for brood sows. While not quite equal to oats, it makes a fair horse feed.

Its most striking value is found in its drought-resistant qualities. Drill two bushels per acre. Price, 34 bu., 30c; bushel of 60 lbs., 90c; 2 bu., sufficient for 1 acre, @ 50c; 10 bu. @ 75c. Bins each, 13c extra.

All prices on field seeds subject to market changes. Ask for Red Figure Price List.

Heads of Speltz or Emmer.
THE TRUTH ABOUT THE SEED CORN SITUATION.

Never in the history of Corn growing in the Northwest have farmers and merchants been required to meet such a critical situation as appears to exist at the time this page is written, December first.

Some consider we are facing what threatens to be, a famine in strictly first class Seed Corn. So far as the 1915 Corn crop is concerned it is practically a failure for seed purposes.

A DISASTROUS SEASON.

Last Spring was very late, the ground remained cold and wet until weeks after the usual Corn planting time. Meanwhile some Corn was put into the ground; the natural result was failure to grow, the seed rotted in the ground. The second planting in some instances fared it the better; such as did germinate grow slowly. There were very few days during the entire Summer which might be called Corn growing weather. Many fields in exposed situations and in less favored localities were caught by frost during the latter part of August; while the first of September, when Corn in a normal year would be ripe or nearly so, most fields were still in the milk or in a less advanced stage. It was hoped that September would be a month of sunshine, but instead continued rains and cold weather prevented maturity. Corn which was apparently ripe carried more than half its weight in moisture. The attempt to cure it, again met with failure because of the weather conditions. Before the middle of November freezing weather set in with the inevitable result that the germ was killed and the Corn made unfit for seed purposes.

Corn Did Not MATURE.

From our fields of Corn, covering two to three thousand acres, we do not expect to have a single bushel fit for seed. Our own crops were carefully tended during the growing period and we believe that had any Corn matured at all, they would have come through safely.

This being the case, it is fair to assume that the amount of Seed Corn throughout the Northwestern states available for spring planting in 1916, is extremely limited. From what we have seen of it, we think that much Corn, which at this writing is considered good, will show extremely weak vitality and very low germination before Spring. We have made many tests this Fall on ears of Corn which were apparently in good condition and it required from 5 to 10 days to determine its germination, when under ordinary conditions, 2 to 5 days would be sufficient. Germination tests have run from 40 to 60 per cent. It is safe to say that by Spring much of this Corn will fail to sprout at all.

Stock Seed in Reserve.

For many years it has been our custom to hold in reserve seed for two years in advance, so that in the event of crop failure we would always have stock seed on which to fall back. We hope that next year we may be able to offer our customers a full line of the varieties which are listed on the following pages. You will find that instead of eliminating these crops entirely from our catalogue this year we have allowed them to remain with very little change. By not printing these pages, we feel that our customers would be disappointed in finding our book less complete than usual.

1914 SEED AVAILABLE.

As soon as it became apparent that the Corn crop for 1915 was in jeopardy, we sent men out to various points in Minnesota, on a tour of investigation who were fortunate in finding several lots of fine seed Corn from the 1914 crop which had been carried over. From these lots, the choicest were carefully selected and tested. The best was purchased and we now have in store several thousand bushels which we will offer to our customers, providing it remains unsold at the time this catalogue is issued, at the reasonable prices quoted in the Red Figure price list.

CAUTION.

Wherever you buy Seed Corn this year, insist upon being advised by the seller as to where the Corn was grown. Unfortunately, there are likely to be placed on the market large quantities of Corn raised in the South which is totally unfit for seed purposes in the North. Be sure that you know where your Seed Corn was grown.

As has been our custom for many years, all Seed Corn which we offer will be Minnesota grown, unless stated to the contrary.

GERMINATION.

We thoroughly and carefully test every lot of Corn before it is sent out. We mark the germination on every bag before it is shipped.

Our improved methods of gathering, curing and storing insure maximum results, but wherever you may buy your seed Corn you should know for yourself that it grows before you plant it, and for your own satisfaction suggest that you test seed before sowing.

PRICES.

For values on all varieties of Seed Corn see the Red Figure Price List sent you with this catalogue. We will be able to supply only the Corn which is offered on this list. These prices are those in effect as we go to press and are subject to market changes.

A Photograph of Three Germination Tests of Our Seed Corn. The Strong Growth of Both Sprouts and Roots Indicates Healthy, Vigorous Seed. Our Orders are Filled with Corn of this Character.
Minnesota Early Yellow Dent.

An early and hardy full dent Corn. The kernel is not so deep and the cob is larger than our Dakota Yellow Dent or Pride of the North, but it can undoubtedly be safely grown a little farther North than either of these varieties. This Corn will stand more hard knocks than any other full dent Corn. We are now offering a limited quantity of choice 1914 crop, Minnesota grown, Early Yellow Dent Corn, not of our own growing, but carefully selected and tested. This Corn has been mild and bred and shows high germination. In view of the great demand for good Seed Corn this season, we suggest that you order immediately upon receipt of this catalogue, to avoid disappointment. For prices see our Red Figure Price List enclosed in this book.

Longfellow Yellow Dent Corn.

See Illustration on the Right.

A handsome, productive, long eared variety that has been raised in Minnesota for years by farmers who appreciate its splendid qualities. They grow it every year regardless of flattering reports about taller varieties that grow big stalks but no larger ears.

The ears of Longfellow Yellow Dent are as long as those of the standard flint sort bearing the same number of kernels and are quite deep for a strictly Northern variety. Another advantage is that these long 16 to 18 rowed ears will cure more readily than a variety with shorter ears having 10 to 12 rows of kernels. The shape of Longfellow Yellow Dent is very desirable for feeding stock, especially calves and yearlings as they can handle these better than the short, heavier ears of some other sorts.

Also stockmen who have been growing the 8 row flint Corn to feed stock in bundles will welcome the Longfellow Yellow Dent because of its heavy yields and absence of suckers while growing. It has the desirable qualities of the flint Corns in shape and size of ear, and in addition the splendid feeding value of a first class yellow dent Corn. It is a pleasure to husk the long ears of Longfellow Yellow Dent—the pittlings are few and the ears are easily separated from the stalk.

Longfellow Yellow Dent is worthy of a trial on every farm in the Northwest where an early, dependable Corn is in demand for feeding purposes. It is also desirable for stockmen in the North who want grain as well as fodder in their stock. Plant ½ bushel of seed per acre in drill rows for ensilage.

This Corn we are now offering is not of our own growing, but is carefully selected stock: 814 crop. This has been well milled and shows a high germination test. The stock is very limited so we suggest ordering early.

For prices see the Red Figure Price List enclosed in this catalogue.

Northrup, King & Co.'s Dakota

Earliest Full Yellow Dent. 16 to 20 rows; recommended for planting south of the 46th parallel of latitude. Thousands of bushels sold since introduced. Grows 7 to 8 feet in height; cob small, well filled out to the end with long, deep grains. It is a very heavy yielder. A fine sort for southern Minnesota, South Dakota and Wisconsin. Average height stalk, 5 ft. 1 in.; average distance base of ear from ground, 3 ft. See note at foot of page.

Pride of the North

A Dependable Early Yellow Dent Corn. In some sections of the Northwest it equals other varieties in yield and quality. The stalks are well proportioned, being short jointed and leafy. Two or more well developed ears are frequently found on a single stalk. The kernels are very deep and closely set on the ear. Pride of the North produces more Corn in proportion to cob than most other varieties grown in the West. It is specially valuable to stockmen, as it can be used for bundle stock. Plant ½ bushel of seed per acre in drill rows for ensilage. Average height of stalk, 7 ft.; average distance base of ear from ground, 3 feet. See note at foot of page.

Minnesota King Corn

Our Own Minnesota Grown Seed. (Yellow Half Dent).

We regard this Corn (introduced by us in 1889) in some respects as one of the most valuable early varieties. There are varieties that under favorable circumstances will yield as much, but few as well in year in and year out, through 15 years and more years, as we have, few that will do so well. It seems to possess a faculty of growing right along and making a crop during weather and under conditions that would ruin some varieties. We do not know of any good reason why this should be so, unless it is that it roots more deeply; but not only is this our own experience, but we have received like testimony from hundreds of others who have not with the general expression being that it is likely to endure extremes of heat and cold, and drought and it is unexcelled. In appearance the Minnesota King is remarkably handsome. It has a half yellow Dent; the kernels are very broad, and a rich golden color. Average height of stalk, 7 ft.; average distance base of ears from ground, 3 feet. The ear of good size, eight rowed, cob small.

Because of the very unfavorable growing season of 1915, it is not expected at the time this catalogue goes to press that there will be a single bushel of new crop Corn fit for seed purposes. Since this uncertainty exists, it is impossible to offer any 1915 Corn or make prices on this page. Should some of this Corn be cured so as to be fit for seed, which is highly improbable, it will be offered on our Red Figure Price List which will be enclosed in the catalogue at the time of mailing.
Pedigreed Seed Corn, like pedigreed stock, must have a record, and our Sterling White Dent Corn has a proud one. The ability of Northrup, King & Co.'s Sterling White Dent Corn to mature earlier and with better qualities than similar products which we have conducted for many years. It is the largest eared, extra early Corn grown in the Northwest, the stalks in any bushing three and one-half feet, or more, high, and the ears to one pound. The stalk attains under normal conditions a height of eight feet; the ears are about 3 ft. 8 in. from the ground. It is a hand harvested corn with a large, healthy and more unusually fine and tender and has been proved to have given the greatest average yield of any early Corn we have ever grown. In field tests with other leading varieties planted under practically the same conditions, and given the same treatment, it has averaged a very much greater than any of the other varieties. The constitution of the Corn is such as to resist extremes of weather to the last degree, and we offer it with the conviction that it will prove a sensation to all those who want an extra early white Corn.

We consider that our Sterling White Corn has the widest range of usefulness and adaptability to soil and climate of any of the full dent sorts of early Corn and the right for early planting. There are also later and larger eared sorts, which under normal conditions would perhaps more satisfactorily meet the ideas of the farmers of Illinois, Indiana, Kansas, etc., who are accustomed to the extremely large eared and deep-knotted sorts of the South, for the corn ground lying between the 42d and 45th parallels of latitude and allowing for reasonable variations in time of seeding and character of soil, we know of no Corn to be compared with it as a large and reliable crop. Where weather conditions are such as to compel late planting or replanting, or where for any other reason the early variety is wanted, we can grow our Sterling White Dent, an extra early Corn that will and has been grown by many farmers. It is a splendid corn for seed purposes. Since this uncertainty exists, it is impossible to offer any 1915 Corn or make prices on this grade. Should some of this Corn be cured so as to be fit for seed, it is very improbable, it will be offered on our Red Figure Price List which will be inserted in the catalogue at the time of mailing.

**Minnesota Grown Early White Dent Corn**

This is a choice 1914 crop White Dent Corn. While not of our own growing, it has been carefully selected and tested for germination. It has all been raised in Minnesota and has matured satisfactorily for many years.

In type it is similar to the Rustler White Dent, having large ears of good weight. The average height of stalk is about six feet, average distance of ear from ground 3 ft. 7 in. The Minnesota Grown Early White Dent Corn of this season is as fine quality as any white dent Corn available. At this writing we have about 3000 to 4000 bushels of this Corn on hand and suggest you order promptly upon receipt of this catalogue, before our stock is exhausted. For prices see our latest Red Figure Price List.

**Minnesota No. 23 Corn.**

This variety has been grown in the Northwest for a number of years. It is a white capped yellow dent corn that has been developed at the Experimental Farm in St. Anthony Park and is strongly recommended by them.

We quote from Farmers' Institute Annual No. 23 as follows:

The Northeastern Experimental Farm, in cooperation with Fred P. Bull, has conducted experimental work with different varieties of Corn with a view of determining their adaptability and yield. Minnesota No. 23 has given the most satisfactory results, and has been selected as a standard variety for eastern Minnesota. During the season of 1910 Minnesota No. 23 yielded at the rate of 36 bushels of corn per acre under field conditions. Of this 80 per cent was quite matured. It was planted March 25th and stricken with frost September 8th, giving it only 96 days growth.

The Northeastern Experimental Farm is located at Grand Rapids, Minn. near Lake Pepin, Minnesota No. 23 Corn produces large ears of early and good stands of corn. Minnesota No. 23 Corn is grown in the ground. It is easily harvested with a corn binder.

High yield is seen in this variety of Minnesota No. 23 Corn the result will be a splendid pasture for hogs or cattle. See note below regarding prices under Sterling White Dent Corn above.

**White Cap Yellow Dent.**

We have grown this Corn for several years, and, although it is early and large eared for the holder, we have not liked it as well as some others. On account of the color of the grain, the cap of this Corn being white and the balance a pale yellow. The increased demand for it, however, and the reports we receive about it, many of which are really astonishing, compel us to recognize the fact that the prejudice we have had against this Corn on account of its color, is prejudice pure and simple, and that White Cap Yellow Dent Corn has come to stay and ought to stay. Our stock of this Corn is invariably exhausted very early in the season, thus proving its growing popularity each year. See page 129 regarding 1910 prices.

**North Dakota Golden Dent Corn.**

This variety is all the name suggests, an extra early, beautiful yellow dent Corn. The stalk is rather dwarf in its growth; the ears are fair size and well placed, sufficiently high above the ground to admit the use of a corn binder in harvesting the crop. Golden Dent is in demand with feeders who wish something to be used as a starter for stock to be fed in the pastures during the Fall. This variety will make good ears when closely planted or in drills. We advise the use of 8 to 10 dts. of seed an acre when drilled. Conditions same as noted under Sterling White Dent Corn above.

**A Square Deal on Seed Corn.**

This season is similar to that of 1912 but conditions are even more serious and the corn crops not generally the worst we have known in the corn growing country. In buying Seed Corn you should take every precaution to make sure you are getting the best quality. Get your seed from the best suppliers from Minnesota, Iowa and other states will be offered. Of course with Corn is only suitable for holder purposes.

For some of the above reasons we have grown some choice Minnesota Grown White and yellow dent Corn, not of our own growing, but carefully selected and tested. These we can have been worked and stand high germination. For prices see our last Red Figure Price List.

**Booklet on Field Corn.** We have condensed much valuable information in this booklet on varieties best adapted for the Northeastern grass land, pasturing, cultivation, harvesting, and storing. It will be sent free to any address on request.

**Northrup, King & Co.'s Sterling White Dent Corn.**

**Greatest Corn for this State.**

For nearly 10 years we have used your free seed corn and seed corn. Your Sterling White Dent Corn I regard as the greatest corn for this state. The high germination of your seeds strikes me as remarkable.

HANS GEORGE ANDERSON,
Nicollet Co., Minn.

The Most Satisfactory. I think I have been using your seeds since you started in business. Your Sterling White Dent Corn has proved the most satisfactory.

A. W. HALE, Clark Co., Wis.
Always Satisfactory.

The seed which I have bought of you during the past 25 years have always proved satisfactory. Your seed corn can be well recommended for the North.

HENRY E. VOIGT,
Hamlyn, Wis.

Write for Special Prices on Seed Corn in large quantities.
**Rustler White Dent Corn**

This early White Dent (14 to 18 rows) was obtained from a few kernels sown by us in the Autumn of 1884 by a Dakota farmer, who stated that he had matured it in that state for seven successive years. It was the only Corn in his section that could show such a record. For early ripening, great yield and compact growth in the ears it is one of the best, admirably adapted to northern climate. Average height of stalk, 5 feet, average distance base of ear from ground, 3 ft. 6 in. Those wishing a first-class White Dent Corn will find in the Rustler a hard Corn to match.

At this time we have a very limited quantity of Rustler White Dent Corn on hand, 1914 crop, not of our growing but carefully selected and tested. For prices see our latest Red Figure Price List. We suggest ordering early before our stock is exhausted.

**Minnesota Ideal.**

One of the Largest Long-eared Varieties

Grown in Minnesota.

Those who have grown this and other varieties claim that it will out-yield Minnesota No. 10 to fifteen bushels to the acre when grown under the same conditions of soil and cultivation.

This Corn has been grown for a number of years in the southern part of Minnesota and has gradually been worked north and is now safe for planting in the latitude of Minneapolis.

The stalks are stiff and strong, about 8 ft. high, and will stand well in windstorms. The ears grow from 3 to 3½ ft. above the ground.

This Corn will produce uniform ears on every stake. There will be very few nubbins. This seems to be a peculiarity of this variety. See note under Gold Medal Corn.

**Minnesota Ideal Yields 83 Bushels Per Acre.**

*From the St. Paul Daily Reporter.*

The value of fertilizer in improving the crop is shown in a report which has been compiled by Swift & Co., who maintained an exhibit of Corn at the Minnesota State Fair grounds in 1914. The Corn plot which contained 1 8-10 acres produced 83 bushels of Corn per acre, and the Corn was of excellent quality, large and uniform in size.

The 1913 average yield of Corn for Minnesota was only 40 bushels per acre.

Swift's "Grain Grower" fertilizer was applied on their demonstration plot—400 lbs. per acre at a cost of $6.00. The seed Corn used was furnished by Northrup, King & Co., Minneapolis, and is known as "Minnesota Ideal." The corn was planted May 17, a day following the application of the fertilizer which was sown broadcast.

The field was harvested thoroughly immediately after planting and cultivated four times during the growing season.

**Gold Medal Corn**

An Early Full Yellow Dent Corn.

A 14 to 18 rowed variety with ears averaging eight to nine inches long. The type is well fixed, the ears resembling almost every other ear, and on account of the high degree to which it is bred, it produces almost no nubbins or small ears. The history of this Corn affords a striking example of what may be accomplished by intelligent and unremitting effort in a fixed direction. For twenty-five years this Corn has been grown in this company, (Hennepin Co., Minnesota).

During the earlier years of its growth here the ears were large and without uniformity, but by careful breeding and selection it is improved until now we have one of the earliest and most productive yellow dent varieties, with ears of good size and the best quality. The kernels are not so deep as our Dakota Dent or Pride of the North, but are smooth and of more handsome appearance, and a good soil and fair cultivation this variety has yielded about sixty bushels to the acre, sometimes more but seldom less. And after maturing in about ninety days, it is ripe usually before frost.

At the time this catalogue goes to press it is not expected that there will be a single bushel of new crop Corn fit for seed purposes. Copper shortage it is impossible to offer any or make prices on this page. Should some of this Corn be cured so as to be fit for seed, which is highly improbable, it will be offered on our Red Figure Price List which will be enclosed in the catalogue at the time of mailing.

**POP CORN**

Big Money in Little Things.

Very often there is good money in "little things" which, because they are small, people are likely to overlook. Popcorn is one of these.

**ITS PROFITABLE USES.**

1st. It yields of shocked Corn of the very best feeding value at the rate of 8 to 10 tons an acre.

2nd. The small ears which mature early, are very valuable for pigs, calves and young stock generally, especially during the Fall and Winter months.

3rd. The yield of ear Corn to the acre is quite equal to any of the larger and later varieties, as it can be planted much more closely than the larger varieties of Corn.

4th. Thousands of cardboards of Popcorn are annually sold for purposes for which the consumption has greatly increased since the advent of "Cracker-jack" and other like preparations.

5th. Popcorn brings a very much higher price other shaded or on the ear than any other Corn and usually a ready market is easily found for any quantity, while in event of an inactive market, it is always fed, and a farmer cannot raise better feed.

6th. Boys and girls can grow an acre or two of Popcorn and dispose of the product to their neighbors or to the merchant. There is usually a demand for this article and in this way considerable money can easily be earned. Why not grow up an acre or two to turn it over to the children. It will afford them pleasure and profit.

Plant at the rate of 6 to 8 spouts to the acre and closely. We have a very choice lot of this Popcorn carefully chosen and tested for seed purposes. Price, large pkt., 10c.; lb., 25c. postpaid. By express or freight at buyer's expense; lb., 35c.; ¼ bu., $1.00; bu. of 50 lbs., $5.00. Seamless bags each, 20c extra.
EARLY NORTHWESTERN OR SMOKY DENT CORN
The Earliest Dent Corn for the Northwest.

This Corn is in a class by itself having red kernels with a yellowish cap, being a cross between a red flint and a yellow dent, but the type has become well established. To some the color is objectionable, but it must be taken into consideration that in most parts of North Dakota, Northern Minnesota, Northern Wisconsin and even Canada this is the only variety upon which the grower may depend to ripen and it is far better to have Corn, even though it is red in color, than to have no Corn at all. In North Dakota, northern Minnesota and in high altitudes this variety can be relied upon to mature before any other dent Corn, and, in fact, is the only sort to ripen in some seasons. No other one variety is as extensively grown in North Dakota as our Early Northwestern Dent, for the reason that season after season it successfully yields a good crop. When we offer seed it is Minnesota grown, every bushel being produced north of Minneapolis, under our personal supervision and from own selected seed stock. It is especially adapted for planting in the far north and our sales of this variety in the northern sections of North Dakota, Minnesota, Wisconsin, Montana and even Canada reach enormous proportions. Not only is it grown in the localities named but for late planting or replants it is especially desirable. It is extremely early and quickly adapts itself to new soil and climatic conditions. We have harvested 75 bushels to the acre and gathered seed from the crop in as many days, a strong tribute to its earliness and productiveness. As a rule, under ordinary Corn growing conditions, Northwestern Dent will mature in 83 to 90 days, and under more favorable soil, cultivation and weather will mature even earlier. The ears are of good size, from seven to ten inches long, and bear 10 to 14 rows of Corn. Under ordinary conditions the average height of stalks is 7 ft. 8 in.; average distance between ears from ground, 3 ft. 5 in., thus admitting the use of a Corn harvester. Early Northwestern Dent may be sown in check rows or in drills. The latter method is in favor in many localities. The stalks, being smaller and shorter than some of the later sorts, may stand close in the row, thus contributing to a heavy yield. Notwithstanding the small ear, yields of seventy to eighty bushels per acre are not uncommon.

This sort is also much grown for fodder and silo purposes on account of its earliness and adaptability. It will, of course, give best yields on a fairly rich soil.

The past season was the most unfavorable in the history of Corn growing in this state and although Early Northwestern Dent generally matures perfectly, even this variety was affected. It is not expected at the time this catalogue goes to press that there will be any 1915 Corn fit for seed purposes.

Since this uncertainty exists it is impossible to offer any Corn or make prices now. If some of this Corn can be cured so as to be fit for seed which is very improbable, it will be offered on our Red Figure Price List.

At present the earliest dent Corn which we have to offer is the Long-fellow Yellow Dent, offered on page 129, from the 1914 crop.

Our Red Figure Price Lists are issued at intervals throughout the season, as changes in price demand. They contain current prices on all grass and field seeds and poultry supplies. We will gladly mail a copy at any time free, upon request.

Wins The Silver Cup.

While on a trip east, I bought some Early Northwestern Dent Corn from you last Fall and I knew you would be interested in knowing that Corn grown from that seed was the winner of the first and second prizes for twenty-five ears, in Winona County this Fall where there were about forty different kinds of Corn. I won the silver cup with the best basket and second prize on twenty-five ears. Thanking you for the courteous way you have treated me and the good quality of seed you sent me.

M. J. RYAN, Winona Co., Minn.

See page 160 for Dwarf Essex Rape, the best supplemental hog feed to plant with corn. See pages 162 and 163 for Corn and other crop fertilizers,
MINNESOTA NO. 13 CORN (UNIVERSITY)

Extra Early Yellow Dent. (Corresponds to Wisconsin No. 8.)

The commanding points of excellence which place Minnesota No. 13 Corn at the head of all yellow dent varieties for Northern planting are:
- Its earliness.
- Its enormous productiveness.
- Its adaptability to a great variety of soils and climates.

To Prof. W. M. Hays, formerly agriculturist at the Minnesota State Experiment Station, recently Assistant Secretary of Agriculture of Washington, D.C., is due the honor of having originated this valuable early yellow dent corn. Not only is it fully as early as any of the yellow dent corns, but its record of heavy yields is such as to mark it as distinctly and undoubtedly the most profitable of all the yellow dent varieties. It was the remarkable productiveness of the Minnesota No. 13 Corn that led Prof. Hays to say: "The inherited quality of Corn to yield heavily or poorly, all comes in the ten pounds, more or less, of seed planted to the acre," and never was the truth of this statement better exemplified than in Minnesota No. 13. Much time and labor was expended by Prof. Hays and his staff of assistants in breeding and perfecting this strain. It was first disseminated as Minnesota No. 13 Corn, the intention being to later give it an appropriate name, but it has since become so widely and favorably known as Minnesota No. 13 that it must continue to be so known. The Directors of the Minnesota Experiment Station consider it the best yellow dent corn for Minnesota, North and South Dakota and Wisconsin; other stations agree in this opinion.

Mr. John S. Cole, Assistant Agriculturist at the Brookings, South Dakota Experiment Station, says: "The county fair held here last week, Mr. Geo. N. Kennard exhibited one bucket of Minnesota No. 13 Corn that I consider was the finest sample of yellow dent corn that has ever been displayed here. Mr. Kennard's corn was raised on clover sod and is estimated to yield from sixty to eighty bushels an acre."

The ears are of handsome appearance bearing 16 to 20 rows of bright, rich yellow, smooth, wedge-shaped kernels packed closely on the cob from butt to tip. The ears average eight inches in length and are borne usually two on a stalk. No Corn excels in quality the Minnesota No. 13; the cobs are well filled and the individual kernels plump and of good color.

Minnesota No. 13 thoroughly matures in ninety days when planted on favorable soil and in a good location, but ninety-five to one hundred days planting places it out of danger under average conditions. A variety of Corn which will show such valuable characteristics is an acquisition on any farm, especially for planting in the Northwest where early frosts are common. It may be planted as late as the second week in June and yet safely mature a crop.

Another point to which particular attention should be directed is its adaptability to changes in soil and climate. Many varieties fail to do well when subjected to new conditions or require several years to become acclimated. Minnesota No. 13 Corn, however, will thrive and produce abundantly on most any soil and will do remarkably well under adverse conditions when other varieties would fail entirely.

The stalks grow to a height of seven feet and being leafy make excellent and very nutritious fodder. We consider this a most valuable Corn to grow, as do also the various Experiment Stations we have mentioned. We refer also to those who have purchased their Corn of us in the past.

CRITICISM OF 1917 SEASON. It is not expected at the time this catalogue goes to press that there will be a single bushel of new crop Corn fit for seed purposes. Since this uncertainty will extend to 1918 Corn or make prices on this crop. Should some of this Corn be cured so as to be fit for seed which is highly improbable, it will be offered on our Red Figure Price List which will be enclosed in the catalogue at the time of mailing.

All prices are subject to change on seed corn, grass seed, Corn, etc. Red Figure Price Lists are issued frequently during the selling season naming latest values.

OPINIONS OF CORN GROWERS—READ THEM.

Grew 100 Per Cent.

I bought some of your Minnesota No. 13 Seed Corn and found upon testing it that it grew 100%. That is good enough for me.

H. KETCHAM, Ramsey County, Minn.

The Best Corn in Wright County.

I am sending you a sample of what is said to be the best field of Corn ever grown in Wright County. It is Minnesota No. 13 and the seed came from you.

JOHN DEWEY, Wright County, Minn.

My Corn did not grow but my Neighbor's Did.

I purchased some Minnesota No. 13 Corn from a seed house in South Dakota last year and it did not grow, but my neighbor bought some Minnesota No. 13 Corn from you and it was fine.

W. M. SINNYDOWN, Brooking Co., S. D.

Last Planted and First to Ripen.

I have four acres of fine matured Minnesota No. 13 Corn. It was cut and shock ed by Sept. 6th. It was surely a grand Corn. I planted it last and it was the first to ripen.

JOHN LEVERTON, Sherburne Co., Minn.

I Thought You Were High in Price.

I grew fine Corn on breaking from Minnesota No. 13 and Sterling White Dent with drought and early frost against it. I thought last Spring you were very high in price, but I would rather pay a big price for good seed and raise grain that I can sell at a profit than pay for poor seed as a gift and raise nothing.

RUPERT D. POTTER, Bowman Co., N. D.

Ready to Cut in Less Than Ninety Days.

I bought some seed Corn from you last spring—Minnesota No. 13—and it is splendid, being ready to cut in less than ninety days after seeding.

FINLEY LYNN, Linn Co., Iowa

Can Recommend Your Seeds to All.

Your seeds have given the best of satisfaction. Have bought of your firm for twenty years. If you had not been reliable I would not have patronized you so long. We were especially pleased with the Minnesota No. 13 and Minnesota King Corn, and can recommend your seeds to all.

D. M. NYE, Winona Co., Minn.

One Week Earlier Than Any Other.

We like your seeds better than any other we have tried. Minnesota No. 13 Yellow Dent Corn is one week earlier than any other variety and the ears are about nine inches long.

Write for Special Prices on Seed Corn in Large Quantities.
**EXTRA EARLY FLINT SEED CORN**

These are the earliest varieties grown and are especially adapted to Northern conditions. They make a rapid growth, mature quickly and under favorable conditions yield immensely. All are perfectly acclimated to our Northern conditions, which mean cool nights and short summers. The "Squaw" type of the Flint Corns are extremely early, but the ears grow so close to the ground that they cannot be harvested with a Corn harvester, hence are most valuable to "hog off" by turning stock into the field and thus allow them to harvest the crop. The Mercer, Triumph, Longfellow, King Philip, and Squaw Nose are also much used for winter where the first plantings fail, also for late fodder on early summer fallows—native sod, and the new corn on the frontier can grow fodder from late plantings cheaper than he can make hay, thus providing a grain ration for the stock.

**Hogging Down Corn.** The practice of hogging down Corn is strongly recommended by the Iowa and several other state experiment stations. These four varieties of Flint corn listed below are especially suited for the purpose. At the North Dakota Station in the Autumn of 1914, a poor crop of the Dent type, from 1/4 acres, was pastured by 16 pigs which made a gain of 910 pounds, or $2.50 in value—after subtracting the cost of some additional concentrates which were fed.

This gives a value of $26.40 an acre for this poor Corn without the expense of harvesting it.

Open pasture is also very desirable to use with the Corn for the best results. See page 140 regarding the use of Rape.

The advantages ofhogging down Corn are that it saves labor of husking, cribbing, refeeding, and feeding, storage is saved as no crib space is needed; the crop is harvested without waste; it gives the most pork for the least expense.

---

**Squaw.** Extremely early and of very dwarf habit. We still grow this Corn for those who want it, but we urge the planting of North Dakota White Flint, or North Dakota Yellow Flint, in its place, as both of these varieties are fully as early, more productive, and make a much more vigorous growth. Average length of ears 7 1/2 inches. Since the seed Corn of 1913 has not matured we have no new crop seed to offer at the present time. On this account, we are unable to quote any prices on this page. If any of this Corn should be cured so as to be fit for seed, which is highly improbable, it will be offered on our Red Figure Price List which will be sent out with this catalogue.

**Improved King Philip.** (Extra Early Red Flint.) An old-time New England favorite perfected by us. Extremely hardy. One of the best and most reliable early sorts. Ears 10 in. long; very early. 1915 seed Corn crop, a failure. See note above, under Squaw Corn.

**Prices on Seed Corn.**

See the Red Figure Price List enclosed in this catalogue for prices on all varieties of Seed Corn that are available this season.

---

**North Dakota White Flint.** Resulting from a careful selection of Squaw corn for many years. Very much better than the Squaw. Average height stalk 3 ft., average distance base of ear from ground 13 1/2 ft. Average length of ear 8 inches. See note regarding crop, under Squaw Corn.

**North Dakota Yellow Flint.** (Gehu) Resembles White Flints in earliness, habit of growth, etc., but the grain is yellow. Under normal conditions this variety will mature in 70 to 75 days. In localities where seasons are short and nights are cool it may be depended upon to give a crop. The yield must, of course, vary with conditions of soil, cultivation and season, but it has been no uncommon occurrence to secure a yield up to 75 bushels per acre. It gives an abundance of fodder of splendid quality. Average height stalk 3 ft., average distance base of ear from ground 14 ft. Average length of ear 8 inches. Conditions same as noted for other varieties above.

Is All Right.

*Your seeds have given me good satisfaction, and your North Dakota Yellow Flint Corn is all right.*

CARL G. CLEMENTS, Chippewa Co., Wis.

---

**King Philip Flint Corn.**

**North Dakota Yellow Flint.**

**North Dakota White Flint.**

**Squaw Flint Corn.**
FIELD CORN, EXTRA EARLY FLINT VARIETIES

Northrup, King & Co.'s Triumph.

Extra Early Yellow Flint.
In the year 1889 we introduced this Corn as the largest eared and most productive of all the early flint varieties. Our customers know that when we send out a new variety that it is just what we claim for it, and so our sales were very gratifying. From every side comes hearty praise of this magnificent variety, more than sustaining every claim made for it.

Our Triumph Corn is a very early flint variety, very bright yellow in color, maturing in from 90 to 100 days from day of planting, according to soil and season. Ears average about 11 inches in length (about 3 inches longer than the Mercer) and are 14 to 16 rows. Occasionally a 12 rowed ear is found; sometimes one with 20 rows. The kernels are large and the stalks are of good height. The ears average two to a stalk, growing well up so as to readily admit of cutting by the harvester. The stalks grow very tall and leafy and make superior fodder. See review of Corn situation, page 128.

Directions for Planting—The habit of this Corn allows close planting. The largest crops of both Corn and fodder will be secured by planting in rows, dropping the kernels one at a time one foot apart. If it is desired to cultivate both ways, plant in hills about 3 feet 8 inches apart.

Drew Two Prizes.
I bought one-fourth bushel of your Triumph Flint Corn last year and drew two prizes at the fair.
E. F. KING, Meeker Co., Minn.

Had A Good Crop.
Your seeds have proved to be very satisfactory. The Early Triumph Flint Corn I bought last Spring had a good crop with nice long ears.
GILES BRONSON, Kittson Co., Minn.

Northrup, King & Co.'s Mercer.

Extra Early Yellow Flint.
Early, prolific, good size ear and small cob. Has been grown in Northern Minnesota and North Dakota for fifteen years with great success and complete satisfaction. Average season of maturity 80 days. Very prolific having yielded 164 bushels of good sound ears to the acre; ears average 9 inches in length. 12 to 14 rowed, well filled out to the tip; a rich golden yellow color; has matured in 75 days from time of planting. Many stalks have large and sometimes three good ears. Stalks average about 5 feet in height and make excellent fodder. Very few suckers. See crop report on page 128.

Longfellow. (8-row Yellow Flint.) A very early 8-rowed Corn of the Canada type; ears cylindrical, about 11 in. long; color, rich glossy yellow. The weight of seed Corn is fully 60 lbs. Average height of stalk 7½ ft., average distance base of ear from ground, 3 ft. Note remarks on page 128 regarding present Corn situation.

Smut Nose Flint. (8-rowed.) A yellow flint Corn blazed with red at end of ear. Ears are large and round. This is a very early variety, and a great favorite in many localities. Our stock is very fine. Average length of ear 10 inches. Average height of stalk 7 ft. 6 in., average distance base of ear from ground, 3 ft. 11 in. See note under Squaw Corn on opposite page.

Matures Quickly.
Your Triumph Flint Corn ought to be introduced extensively into the northern part of New England, as I believe it capable of outyielding the flints now in use. I shall use it for late planting as it matures so quickly and the rows can be planted close together.
HUBERT D. GOODALE, Fairfield Co., Conn.
FOUR LARGE-EARED STANDARD VARIETIES

Not Recommended for Planting North of Parallel 43°, or the Southern Boundary of Minnesota.

Reid's Yellow Dent Corn. This is a splendid yellow dent variety with eighteen to twenty-four rows of kernels on an ear. The cob is small and grains are very close together so that there is scarcely any room between the rows. We do not recommend this Corn for growing north of the forty-third parallel, but for Iowa, Nebraska, Kansas, Missouri, Illinois and other states in the same latitude, this is the Corn to grow. Reid's Yellow Dent has been awarded more prizes at Corn Shows than any other variety.

The ears average from eight to eleven inches in length. The stalk is very heavy, and is not easily blown down. This Corn will mature under favorable conditions in about 115 days.

Our stock was grown for us by one of the largest and most reliable growers in Nebraska. It must be remembered that we do not recommend this Corn for Northern planting except to be used for fodder or silage purposes. This is also true of the other varieties listed on this page.

Limited quantity to offer, for prices see Red Figure Price List.

Iowa Silver Mine Corn. The Great $1.00 Corn. The introducer of this variety of Corn says: "The most marvelous variety of Corn ever offered, and which will surprise everyone who plants it. If the farmers take hold of this as they should, it will revolutionize the Corn growing of the country. Stalks grow to a height of about seven or eight feet and the ears about three and one-half to four feet from the ground. Just the right height for easy picking. It is early, matured last year in less than ninety-five days. The cob dries out rapidly, so that it is ready for the market very early."

This variety is more generally grown throughout the corn belt and is more widely and favorably known than any other white Corn. It is a sure cropper; very early; deep grain; pure white, and a good Corn in every way. It seems to have the faculty of producing a better crop on old, thin land than any other Corn, as it seems to adapt itself to unfavorable conditions. This seems to be a characteristic of most white Corns.

Silver Mine, is, of course, adapted for Northern conditions, and we do not recommend it for planting except south of the northern tier of counties in Iowa. In favorable seasons it will produce a crop in southern Wisconsin, and southern South Dakota, but in all seasons is the Corn to grow in southern Iowa, in Kansas, Nebraska, Illinois, Indiana and Missouri. The ears bear sixteen rows, very straight and close together. For the locations mentioned, we believe this Corn will give better results than any other white variety.

At the time of going to press we have a limited supply of this variety to offer. See Red Figure Price List mailed with catalogue.

Iowa Gold Mine Corn. A Splendid Yellow Dent Variety. This Corn is identical in appearance and habit of growth, in size of ear and earliness and in productivity with the Iowa Silver Mine, and every one who has tried it is enthusiastic in praise of this splendid variety. It is early, ripening but a few days later than the Pride of the North. Ears are not excessively large, but of good size and symmetrical. Color, a bright golden yellow. Texture of the new corn direct tires the mint. Grain is very deep, cob small, and therefore dries out nearly as soon as it ripens. 70 pounds of ear Corn make 50 to 62 pounds of shelled Corn, and a car of Nebraska silver mine will contain five bushels more to the wagon load than common varieties in the same size wagon. 70 pounds of Corn on the ear have given 44 pounds of shelled Corn and only six pounds of cob. This is unparalleled and cannot be equaled by any other Corn in the world.

The kernels are deep, wedge-shaped. Our Corn has been carefully grown, selected, cleaned and tested. Price subject to market changes. See Red Figure Price List.

King of the Early. In Iowa, Nebraska, Kansas, Missouri, Illinois and other states in the corn growing belt. We do not recommend this Corn for Minnesota or any of the northern states, to grow for Corn. But for fodder it will be found very valuable, producing as it does, an immense amount of heavy foliage and the yield of forage an acre is very large. In an extra-long and favorable season it may mature here. In the states named above this sort will give a large crop, and is very satisfactory to grow. The ears averaged to twelve inches in length and 14 to 20 rows. The kernels are deep, wedge-shaped and set very close on the cob. Stalks under ordinary conditions are 7 to 8 feet high. See Red Figure Price List for present values.

Early Murdock

Suitable for Southern Wisconsin and Minnesota and South Dakota.

This is a standard and well known variety in Iowa and southern Minnesota. We have been working on this variety for several years to acclimatize it to sections farther north. We can usually offer very limited which is safe for growing in the three southern tiers of counties of Minnesota and corresponding territory east and west, in South Dakota and Wisconsin. It may be also grown anywhere south of the locality mentioned and in favorable seasons, would do well even a little north of Minnesota.

It is considered one of the most standard and as early as any of the deep-kernelled varieties. It is well established in Iowa and is growing in favor with those who know it. It is one of the most dependable of the later varieties. It has a stout, stiff stalk which stands well in storms, growing 6 to 8 ft. high. The ears are borne well up on the stalk. It almost invariably yields well and with good care and favorable conditions will give very large crops. See page 128 regarding Corn situation, also Red Figure Price List.

Like Them of Course.

We have been using your seeds for nearly ten years. We like them of course or we would not be sending for them. We never had a package of seeds in all that time that failed to grow. (Miss) E. N. NETTLETON, Wis.
Northrup, King & Co.'s Sterling Silo Corn.

The building of silos throughout the Northwest, and more especially in Minnesota, Wisconsin and the Dakotas has increased to a remarkable degree. More silos have been built in this part of the United States within the last few years than anytime previously.

Grain grown in this rich soil is in demand for silage feed for feeding cattle, sheep, and other live stock on the farm.

Silo Corn is one of the most largely used of the various crops useful for silage, but it is not so thoroughly understood as it should be that its value depends—

First, upon the condition in which it is put into the silo, and secondly, the purpose for which it is to be fed.

Large quantities of Southern Corn are used for silage in sections where ears will not form. Where a large bulk of green feed is desired, as in Iowa, this Corn may be used profitably, but the feeding value is not nearly so great, ton for ton, as in the more nearly ripened Corn. In such cases, all sections should be grown for silage. Those varieties of Corn that will, in an average season, form well developed, if not perfectly matured ears.

Following this principle, we have selected for the various latitudes hereafter mentioned, leafy sorts, as tall growing as the section permits, which may be rolled, in ordinary seasons, to form full sized ears, and, in long seasons, to mature the Corn itself if so desired. We therefore place the customer's varieties which should be planted for silage as follows—

Northrup, King & Co.'s Sterling Silo Corn No. 1, ripens north of parallel of latitude 47°, viz; Northern Minnesota and Northern North Dakota.

Northrup, King & Co.'s Sterling Silo Corn No. 2, between parallels 47° and 45°, viz; Central Minnesota, Northern Wisconsin, Southern North Dakota and Northern South Dakota.

Northrup, King & Co.'s Sterling Silo Corn No. 3, between parallels 43° and 45°, viz; Southern Minnesota, Southwestern Wisconsin, Southern South Dakota and Northern Iowa.

Northrup, King & Co.'s Sterling Silo Corn No. 4, south of the 43° parallel, viz; Southern Iowa, Nebraska, Kansas, Missouri, Illinois, Indiana, etc.

By taking these foder Corns, being careful to order the number recommended for the latitudes mentioned, the grower will have the important advantage of being able to put Corn into his silo, in the precise condition he may deem best for his use.

Booklet on Silage and Silos. A treatise on growing, handling and feeding silage and instructions on how to build a silo. It will be sent free with orders if requested or will be mailed upon receipt of 5c in stamps.

PLANTING AND HARVESTING.

Planting. Generally speaking, the seed should be sown in drills 3 ft. in capacity, using 1 1/2 bushel of seed per acre, depending not only on the soil, but also the purpose for which the land is desired to be used.

Whenever less grain and more bulk is desired more seed may be planted to the acre, giving a greater amount of leaf and stalk, if the object is for feeding cattle. For feeding cattle the opposite is true; the more ears produced the greater the fattening properties and for that reason less seed should be sown per acre, giving it a better opportunity to mature. In either case the tonnage per acre will be about the same. In the one case there will be more leaf and stalk and less ears and in the other instance the opposite, less stalk and leaf but more grain.

Also by the use of these varieties, if the grower wishes, it may be cut at an earlier stage of growth. Later it may be put in the silo in any desired stage and if the season promises to be long enough, it may be left to ripen and ripen the grain into the silage.

Harvesting. Corn intended for the silo should be harvested with a binder and the bundles allowed to remain in the field for a day or two, where other factors are good, so that the moisture of the leaves is evaporated. Water may be applied from a hose as the corn passes through the silage receiver. This will keep the leaves from breaking and become partially dry in the field may also be treated in this manner later and make excellent silage.

The Value of Proper Seed Stock. The best seed obtainable costs more than crib Corn, but it is worth many times the difference to the grower. Our experience, of more than a quarter of a century, in growing seed Corn places us in a position to determine which are the best varieties for grain as well as for silage. We offer the above varieties with entire confidence, believing the yields will not disappoint those of our customers who want seed Corn for special purposes.

Our sales of seed Corn are increasing many thousands of bushels each year, which is conclusive evidence that the seed is obtained from the use of our highly selected and high bred stocks by planters in the Northwest, and we are very confident that the result is due to the use of our specially prepared seed stock.

Special Notice: While we specialize in seeds especially adapted for Northern use, our trade in fodder, silage and seed Corn all over the country is so large in quantity, and this is probably the case with any stockman or farmer making use of our special and ours exclusively for any purpose or section, and we shall appreciate being given an opportunity of selling such a silo corn if you are interested at any time; we shall be glad to tell you for what particular purpose the seed is wanted and we will be glad to make recommendations.

Prices.

Owing to the necessity of printing this catalogue in the Fall of the year, the edition being so large, all prices are subject to change in value. We enclose this list of prices with the date prevailing at the time of printing. The name and value prevailing at that time and will continue to issue same during the season, as mailed to our customers on request.

Northrup, King & Co.'s Sterling Silo Corn No. 1. Per bu, $2.50.

Northrup, King & Co.'s Sterling Silo Corn No. 2. Per bu, $2.25.

Northrup, King & Co.'s Sterling Silo Corn No. 3. Per bu, $2.00.

Northrup, King & Co.'s Sterling Silo Corn No. 4. Per bu, $1.75.

How to Fill the Silo.

Cutting Silo Corn on the Minnesota Experiment Station Farm.

CUTTING THE CORN. The proper time to cut Corn for silo filling is when the kernels are well dented and almost mature. The lowest leaves are turning brown at this time but the stalks are still green and contain a large amount of succulence.

If cut while the Corn is still immature and green, the silage will be sour and too laxative in effect, neither does it then have the feeding value that silage made from more matured corn has.

Caution. The blow pipe must be as nearly perpendicular as possible, so that the air will sift the material. If the pipe has much slant, the material will settle on the lower side of the silo, instead of pushing it up.

Adding Water. When Corn for any reason becomes over ripe and dry, excellent silage can still be made from it by adding water while it is being cut into the silo, a half a barrel to each head of Corn.

Good silage can be made from frosted Corn in the same way. In order to get a perfect distribution of water in the silage, it should be run through the blowers with the silage. This can be done by running a steady stream into the blowers by means of a small hose.

Packaging the Silage. Thoroughly packing by tramping improves the quality of the silage. This should be done thoroughly, close to the wall. The center will take care of itself.

The surface of the silage while the silo is being filled should be kept concave, that is, lower in the center than at the walls. This will prevent an air space occurring between the wall and the silage from settling later.

Danger. When the Corn is cut into the silo it soon begins to heat, which causes large amounts of carbonic acid gas to be given off. The gas being heavier than air collects in the silo and must be given a chance to flow out before the silo is filled. A gas easel is sent into the silo when work commences in the morning.

This may be done by opening a door at the surface of the silo. Running in fresh material will soon mix up the gas with fresh air and make it safe.

Capacity of Silos.

Slage for 200 Days.

Book on Weeds and How to Eradicate Them. By Prof. Thomas Shaw. This book contains a complete list of weeds prevalent in the United States and Canada and contains formulas and methods of destroying them. Price, cloth cover, 50c; paper cover, 25c, postpaid.
FOR many years we have been preaching Fodder Corn to the farmers of the Northwest, but the dry seasons of the last decade aroused them fully to its great value, especially was this true the last few years. When other crops had failed, and the farmers were wondering what they would do for feed, many planted Fodder Corn, because it was too late to put anything else. Now every one of them puts a liberal acreage into Fodder Corn, because they have found it one of the most profitable crops to grow; not a makeshift, but a necessity. The increase in our sales of Corn for fodder purposes in the past few years is almost incredible. We make a specialty of Fodder Corn, and our customers will find it to be of the highest quality.

New Uses for Fodder Corn.

This excellent forage crop has been grown largely in the Corn growing sections because it produces more tons of feed an acre than any other grain or grass—23 tons an acre of green feed are often reported and occasionally 35 to 40 tons are produced on a single acre where conditions are most favorable for its development. Fodder Corn is now sowed broadcast at the rate of two or three bushels an acre for supplemental pasture to be used when grass is short and often dry during the autumn months.

To Kill Quack Grass.

Quack grass is taking possession of many of the best farms in the country. In such cases Fodder Corn is one of the best cover crops to smother this pest by shading it from the sun. Plow the quack grass sod late in the fall, which, with the freezing of the roots will greatly injure the plant. Cultivate with a spring tooth harrow every week during April and May. Plant Giant or Elephant Fodder Corn in drills, using one bushel of seed an acre and thus smother the quack grass and other weed pests.

LARGE SOUTHERN VARIETIES.

Prices Subject to Market Changes. See Red Figure Price List issued frequently during the season.

Northrup, King & Co.'s Giant Fodder Corn.

We believe that in most cases farmers can better afford to pay the price we ask for our Giant Fodder Corn than to plant other Southern varieties as a gift. First, because in proportion to the quantity of leaf, this variety has a smaller stalk than any other variety. Second, while several other well known varieties of Fodder Corn often grow just as tall and even at times throw out leaves that are as large, the extraordinary productiveness of the Giant Fodder Corn arises from the closeness of the joints: and as leaves are thrown out from each joint, the result is an increased yield of fodder over any other variety. An extra pair of leaves on every stalk will more than pay the entire cost of seed on every acre of ground.

There are many reasons for considering Giant Fodder Corn the best and most economical; certainly it is by far the best of all the large growing varieties. The only objection that has ever been raised to the Giant is that it grows very large, and is therefore harder to handle than the smaller sorts. We have been selling it in the larger size shelled bushels, which was 1½ feet in height; at the butt the stalk was two inches in diameter; half way up the stalk, 1½ inches in diameter. It bore 23 pairs of long and very broad leaves. This would seem to afford ample proof of the enormous feeding value of this truly remarkable Corn.

Drill 3 to 4½ bushels to the acre in rows about 3½ feet apart. Five or six kernels to each foot of row. The seed of this variety is very large and pure white. Price of Northrup, King & Co.'s Giant Fodder Corn, ½ bu., 50c.; 1 bu., $1.00; 5 bu., $1.50; 25 bu. @ $1.25. Seamless cotton grain bags holding 25 bushels, each, 20c extra. Write for special prices on round lots.

The above means that the item to which it applies has been "Registered in the United States Patent Office." Giant as a trade mark to apply on Fodder Corn may be used by us exclusively. No other is genuine. When buying Giant Fodder Corn be sure the above trade mark is on the bag.

Varieties of Fodder Corn.

Fodder Corn may be divided into five classes, viz: Large Southern Varieties, Medium Dent Varieties, Early Dent Varieties, Flint Varieties and Sweet Varieties. Each of these has its friends. All may be successfully grown for fodder in almost any latitude. The merits of each class are briefly stated under their respective headings. If further information is desired, we shall be glad to supply it as far as it lies within our power, and will be pleased to make recommendations when desired. There is one point we want to impress on stockmen, dairymen and others using Fodder Corn, and that is to place your orders early. By so doing you secure the benefit of the present low prices. You can test the seed and have Corn on hand that you know will grow when you are ready to plant.

The question of which is the BEST Fodder Corn will probably never be fully settled, any more than will be the question of the best breed of horses or cattle, as we try to present briefly and fairly the leading points of superiority claimed for each variety.

Southern White Fodder Corn.

This is a tall growing, leafy variety possessing the general characteristics of our Giant, but is not so closely jointed and therefore bears a few less leaves, with a corresponding smaller tonnage per acre. Price of 3½ bu., 50c.; 1 bu., $1.40; 2½ bu., (bag) @ $1.10; 10 bu. @ $1.35. Seamless cotton grain bags holding 2½ bushels, each, 20c extra.

Booklet on Slag and Silos. A treatise on growing, handling and feeding silage and instructions on how to build a silo. Contains much information of value and is well worth having. It will be sent free with orders if requested or will be mailed upon receipt of 5c in stamps.

Book on Feeding and Management of Live Stock by Prof. Thos. Shaw. A series of lectures on the principles covering selection, breeding, management and marketing of cattle, sheep and swine. 100 pages. Price, cloth cover, $1.00; stiff cover, 50c, postpaid.

Just the Thing.

Your Giant Fodder Corn is just the thing for this country. I always raised it when in South Dakota and was much pleased with it there. What I plowed early grew eleven feet tall, and what I planted the 8th day of July grew to be seven or eight feet tall. The cattle eat every bit of it, so there is no waste, and I believe it will produce more feed in the acre than any thing else can raise. I planted five bushels of this Corn and I consider it safe to recommend it.

T. V. NASH, Douglass Co., Minn.
MEDIUM DENT FODDER CORN.

Many prefer for fodder smaller growing Corn than the large and later varieties, claiming foot long, the stalks to be more advantageously cut. The stalks are readily handled by the corn harvester, and maise is either cured or handled earlier, and gives well formed ears; 3d, that it is more easily cured. 4th, that the stalks are more easily handled in putting into the slibe cutter, or fed long.

Northrup, King & Co.'s Elephant Fodder Corn. We believe this variety will best please the advocates of the type of Corn above referred to. It is tall growing, averaging 7 to 8 ft. It is very leafy. It has a small stalk, and will form even in the Northern States, and in Northern Dakota, good sized ears, thus adding to its feeding value. It is low in price. Drill in rows about 3½ ft apart, and 50 lbs. per acre.

Elephant Fodder Corn has been registered in the United States Patent Office by us, as we have used this brand in connection with fodder Corn for a great many years, in fact were the first to use it in this connection. Please note that it is contrary to law for any one to use the brand “Elephant” of Fodder Corn without our permission. Every bag will be marked, “Reg. U. S. Pat. Off.” and show the above trade mark. Price, ½ bu., 30c; bu., $1.65; 2½ bu., (bar) @ $1.35; 10 bu. @ $1.50. Seamless cotton grain bags holding 2½ bushels, each, 20c extra.

EARLY DENT FODDER CORN.

Many stock raisers are growing early dent Corn as it gives a large proportion of fairly well matured ears, producing a very nutritious feed.

Early Yellow Dent Fodder Corn. When sown thickly in drills, at the rate of from one to one and a half bushels to the acre, this seed will give a surprising amount of rich feed, relished by all stock. It can be cut and run through an ensilage cutter for the silo just before maturity or it may be fed in the rack. Price, ½ bu., 70c; bu., $2.15; 2½ bu., (bar) @ $1.50; 10 bu. @ $2.00. Seamless cotton grain bags holding 2½ bushels, each, 20c extra. All prices subject to change. Our Red Figure Price List gives latest values.

Early White Dent Fodder Corn. May be planted the same as the Yellow Dent Fodder Corn and matures at about the same time. While the Early Dent Fodder Corn does not yield so heavy a tonnage an acre, the resulting crop in most cases is of greater feeding value. ½ bu., 75c; bu., $2.15; 2½ bu., (bar) @ $1.50; 10 bu. @ $2.00. Seamless cotton grain bags holding 2½ bushels, each, 20c extra.

FLINT VARIETIES FOR FODDER.

Farmers of Maine, Vermont, New Hampshire and Massachusetts use White Flint Fodder varieties almost exclusively. There is absolutely no waste in this class of Corn, as the stalks are eaten greedily, and the feeding value is superior to everything but the Sweet Fodder or Early Dent varieties.

Northrup, King & Co.'s White Flint Fodder Corn “State of Maine.” Our “State of Maine” Fodder is the tallest growing and best of the white flint sorts. We have great faith that it is to become a most popular variety in the Northwest, and we would like to have our customers give it a trial. Even the staunch friends of “Giant” and “Elephant” will find in the “State of Maine” something for them to “think about.” Drill 1½ to 2 bu. to the acre. ½ bu., 80c; bu., $2.00; 2½ bu., (bar) @ $1.50. Seamless cotton grain bags holding 2½ bushels, each, 20c extra.

Early Yellow Flint Fodder Corn. We are getting to sell a good deal of this variety for fodder. Stalk, leaf ear and all make splendid fodder. ½ bu., 80c; bu., $2.40; 2½ bu., (bar) @ $2.20. Seamless cotton grain bags holding 2½ bushels, each, 20c extra.

All prices subject to market changes.

SWEET VARIETIES FOR FODDER

Early Sweet Fodder Corn. This makes capital fodder, and will mature ears in almost any part of the Northwest. The stalk is small, but sweet and honey and nothing can make better feed than this fed ear and all. Drill 1½ to 2 bu. to the acre. It rows just far enough apart to admit cultivation. ½ bu., $1.60; bu., $3.00; 2 bu. (bar) @ $2.90; 10 bu. @ $2.85. 48 lbs. to the bushel. Seamless cotton grain bags holding 2 bushels, each, 20c extra.

Evergreen Sweet Fodder Corn. All varieties of sweet corn possess very much more “sugar” than any feed sort, and this being the most important constituent, it necessarily follows that the Corn holding this in greatest quantity has the greatest net value. Evergreen Sweet Fodder corn much taller than the Early Sweet Fodder and makes well formed, but not matured ears in almost any part of the Northwest. Drill 1½ to 2 bu. to the acre. ½ bu., $1.90; bu., $3.00; 2 bu. (bar) @ $2.90; 10 bu. @ $2.85. 48 lbs. to the bushel. Seamless cotton grain bags holding 2 bushels, each, 20c extra.

Early Dent Corn Growing for Fodder.
DWARF ESSEX RAPE

Dwarf Essex Rape. Dwarf Essex Rape is one of the most valuable forage plants, its many uses being fully considered, that has ever been introduced in the United States, and we take pride in having been the first seed house to bring it prominently before the farmers of America.

Now that the sale of Rape Seed amounts to thousands of tons annually, it is interesting, by way of contrast, to look back to the year when we introduced it, and find that our sales for the season were less than 500 pounds.

Our customers can well understand that it gives us great pleasure to have lived to see our faith in Rape, for use in this country, amply justified by the outcome and that our effort to supply the very best quality of seed is recognized all over the United States.

Dwarf Essex Rape has been usually grown, until recent years, to furnish pasture for sheep and lambs, but it is now being found equally good in providing pasture for all kinds of stock. It is splendid for dairy cows.

Under average conditions a yield of from 10 to 20 tons of or more of green forage per acre may be expected. According to a recent government bulletin, one acre of Rape with grain will fatten 20 wethers in two months. Ten sheep eat about one-third of an acre in the same time.

About Quality and Price of Our Rape Seed.

Our Rape seed is of choice quality, selected stock. We pay a premium in order to get pure, clean, reliable seed and it has always given great satisfaction. A saving of a cent or two a pound means from three to ten cents an acre. We do not feel that for this difference between the price of known and unknown seed, that we or our customers are justified in taking a risk.

Price, lb., 25c; postpaid. By express or freight, lb., 15c; 10 lbs. @ 10c; 25 lbs. @ 9c; 50 lbs. @ 8c. Price subject to market changes. See our latest Red Figure Price List for current value. Write for special prices on large lots.

Booklet on Rape. How to sow, grow and use it. Written for us by Prof. Thos. Shaw. To all who purchase Rape Seed we will send free upon request this pamphlet which brings the subject of Rape down to date. It contains many valuable suggestions.
Northrup, King & Co.'s ANNUAL HOG PASTURE MIXTURE

Sold only in Sealed Bags.

We most earnestly urge upon farmers all over the United States the real importance to them of using this Annual Hog Pasture Mixture of ours. It is called Annual Hog Pasture Mixture because we claim, and we think, that it is intended primarily to supply pasture for swine. It is also, however, proved of such great economic value, not only for swine but all other live stock, that its use is increasing at a rate that is truly amazing even to us who know how widely the mixture is used. It is made from 14 different grains and forage plants, many of which grow again as fast as fed down.

From every part of the country come to us letters telling us of the results of its use, and if we had room to print these letters, there is not one thoughtful farmer who reads this but would be so thoroughly impressed with the fact that he too should sow this mixture, that he would not fail to secure some of this seed.

No matter how much feed you have for your hogs, sheep and cows you can profitably grow our Annual Hog Pasture Mixture. The results will please you, as they do those who have used this mixture before. We would urge you to try it.

Mr. John Pfeifer's Letter.

The hogs, pigs and calves on my farm have the run of a large apple orchard which is seeded to a variety of grasses, including Clover, Alfalfa, Blue Grass, Timothy, etc. It has proven to be extremely valuable, and even the fruit trees make a fine pasture. However, I believe that best results are obtained from the use of the largest possible variety. Forage plants in the pasture, I saved an acre to your Annual Hog Pasture Mixture. It made a wonderful growth, and 28 tons of feed is underselling the yield that acre gave me. I kept 50 pigs on it while they were weaned from their mothers. It grew faster than they could eat it. The cows were turned on the Hog Pasture Mixture after waiting to keep it down. It makes a very large supply of winter feed for all kinds of live stock.

JOHN PFEIFER, Minn.

Remarkable Results.

I bought some of your Annual Hog Pasture Mixture and it produced very remarkable results.

It Did So Well.

Give me your prices on 2000 pounds of your Annual Hog Pasture Mixture. Yes, I want one ton. It did so well last year that I sell the extra today.

JOHN F. CLOSS, O.

Consider it the Best Thing.

I wish to say that I have used your Annual Hog Pasture Mixture and consider it the best thing that ever came to the farmers of the Northeast. Hog raising has always been conducted on a small scale on most of our farms because, until this mixture of yours was introduced, nothing could be found in the form of an annual plant that would furnish good pasture from Spring until Fall without becoming woody and tough, unless great care was taken in the manure and care taken in the feeding of the hogs. It is not a mixture of grasses, but it is a mixture of grasses and forage plants, and is not only better for swine but for all other livestock, as it has been shown all over North America.

JOHN F. UNDERHILL, Minn.

A New "Point of View."

Mr. Hog. "Really, my dear, I think we shall have to raise our farmer's wages. He has shown most commendable foresight in providing us with this excellent pasture. In all my farming experience I have seen nothing like it."

It's the Greatest Money Saver.

I bought a lot of your Annual Hog Pasture seed in the Spring. I hope you'll carry it another year. It's the greatest money saver, in keeping hogs, we ever had in the Spring. J. N. TITTMORE, Maple Lodge Farm, Wis.

Hogs Could Not Keep It Down.

I saved one acre to your Annual Hog Pasture Mixture and had thirty hogs running on it all season. They could not begin to keep it down and I was very much pleased with it, and can recommend it to anyone engaged in the hog raising business.

PETER FRANDSON, Iowa.

It Saved Many a Dollar.

Your Annual Hog Pasture Mixture was a great success. It saved me many a dollar in buying feed last Summer; it is representing my neighbors.

JOHN COLEMAN, Minn.

Found them O. K.

I have sent to you for two years for my seeds and have found them O. K. in all respects. I have received no seeds that did not give good satisfaction in every particular. I am in the market for more for next Spring.

R. A. WERNER, Oakey, N. D.

Very Good Results.

I have sowed Northrup, King & Co.'s Annual Hog Pasture Mixture for two successive years and have had very good results. Also you Elephant Fodder Corn is a bumper crop. It yielded 500 pounds to the rod in the row. The fact is I cannot get along without these two kinds, and I don't know of any other seeds that will do as much green feed as these do.

LA. WISEST, S. D.

Especially Satisfactory.

Your seeds for the past three years have always proved satisfactory especially your Annual Hog Pasture Mixture.

JOHN DAHLBERG, Wis.

Used It Five Seasons.

The Annual Hog Pasture Mixture purchased from you has been so satisfactory I think you should know it. This is the fifth season I have sown it and consider it the best of anything I have seen. During the past five years I have purchased several hundred pounds of your Sterling Timothy, Medium Red and Alskie Clover and Alfalfa, and cannot speak too highly of the results. Our neighbors who have always believed in the average run of seed have pronounced the finest they have ever seen and some have been using it on account of our good crops. I always take pains to speak a good word for your seeds as I think you are entitled to it, and many more should use them than are now doing.

F. L. DAGGETT, Minn.

PERMANENT HOG PASTURE MIXTURE

So great has been the success of Northrup, King & Co.'s Annual Hog Pasture Mixture, that we now offer a permanent Hog Pasture Mixture which will remain for years without re-seeding. This mixture is offered with the confidence that it will give stock raisers entire satisfaction. It has already been thoroughly tested and proved of great value for all kinds of stock. It contains five varieties of Clover, besides many other kinds of grasses. We do not recommend this to entirely displace our Annual Hog Pasture Mixture, as it will not produce so much in bulk, nor make new growth so quickly after pasturing. It is, however, a substantial mixture which will prove a profitable investment to any farmer and we are safe in saying, cannot be equaled anywhere. Not only is it suitable for hogs, but sheep, cows and horses relish this rich pasturage. You cannot afford to be without it. Order both kinds to keep your stock well supplied with abundant food. Now from 20 to 100 acres. Price: $17.00 per 100 lbs. Sacks free. In less than 50 lbs. lots, 10e per lb. Price subject to change.
FORAGE AND SOILING CROPS:

Sorghum or Sugar Cane.

Prices subject to market fluctuations.

See latest Red Figure Price List, which will be mailed free to any address, upon request.

Note that the wide range of uses to which Sorghum may be put, and its great value in each case.

As a silage crop, Sorghum will always prove of great value, since at least two crops can be obtained from one sowing. Milk cows are exceptionally fond of Sorghum. It is excellent for milk production and grown area furnishes a large quantity of succulent food. An acre of Sorghum yielding 15 tons of green forage would feed 50 head of stock for 10 days. It should be fed sparingly at first, to avoid bloating.

As a pasture crop for sheep and swine it has no superior. When grazed down it will quickly spring up again, thus a large amount of pasture may be obtained at a season when forage is scarce. Cattle should be accustomed to it gradually. Sorghum pasture is said to encourage, to maintain a steady, profitable growth through the Summer. Mixtures of Sorghum with barley or oats have been found to give heavier yields than Sorghum alone.

As a fodder crop it furnishes an enormous amount of feed. Sorghum out-yields Fodder Corn, producing a richer and more nutritious feed than corn. The value of it alone. Fodder Sorghum is grown in all the tillable portions of the United States that will produce Corn, and will withstand very much better that corn.

Culture. The land should receive essentially the same treatment for Corn. A liberal application of well rotted manure manure will be a great aid in producing large crops.

The quantity of seed to be sown to the acre depends on climate conditions and upon the mode of planting. If sown broadcast, or with a grain drill, all tubes in use, 50 to 60 pounds of seed to the acre will usually be liberal. If the moisture is likely to prove inadequate to the growing crop, more satisfactory results will be obtained by reducing the quantity of seed. If grown in single rows with a space between, a less quantity of seed than above stated will suffice, depending upon the distance between the rows.

From the illustration it will be seen how leafy and tall the Minnesota Sorghum grows. The stalks are slender and leaves succulent. The result may be cut with a mower and cured in swath or cocks or cut with a binder or scythe.

Sorghum sown broadcast and harrowed in, can be harvested until 6 to 7 inches high without injuring the young plants. Sorghum in wide rows should be cultivated like corn.

**Minnesota Sorghum.**

*Early Amber Can.* This is the earliest of the Minnesota Sorghums, and is the only variety which can be relied upon for sugar or syrup in Minnesota. It produces a rich, clear syrup for which Minnesota has become famous, the usual yield being from 150 to 250 gallons an acre. The yield of sugar is also large, amounting to 20 to 25 bushels an acre. As a fodder plant we believe this exceeds the Southern Canes, as it is sweeter and contains more nutritive and is more resilient and by standing. From the illustration it will be seen how leafy and tall the Minnesota Sorghum grows. The stalks are slender and leaves succulent. The result may be cut with a mower and cured in swath or cocks or cut with a binder or scythe.

This variety does not mature so early as the Minnesota Sorghum, but the yield is very much better. When Sorghum is grown for fodder only, the Southern Canes will give the greatest tonnage and is usually grown on that account by dairymen, to feed their milk cows. It is also desirable when grown as a pasture plant for sheep, hogs or cattle. All kinds of stock eat it readily. Southern Canes are not suitable for making syrup when grown in the North, but are perfectly adapted to this purpose in the South.

**Southern Cane.**

This grass is introduced by the Department of Agriculture and it has been tested at several experiment stations. Prof. A. C. Arny of the Minnesota Experiment Station writes as follows: We have experimented with Sudan grass quite extensively for the past two years. As far as my experience can see at the present time, it looks as though Sudan grass could well take the place of Millet or any other annual hay crop. If sown about May first of the rate of thirty-five to forty pounds per acre, it may be cut some time in July just before heading out. This gives it time to a second growth to reach the stage where it can be used for pasture or cut for hay. From the fact that Sudan grass may be used to produce two crops per year from a single sowing, it looks to me as though it should be preferable to Millet.

This does not mean that Sudan Grass will replace Timothy or Clover but will doubtless compete with Millet wherever it is now grown. Sudan Grass belongs to the Sorghum family. It is an annual, lacking underground root stalks. Two cuttings can be obtained under favorable conditions, and growers near Minneapolis report two big crops last season. The yields vary from 1 to 4 tons of cured hay per acre.

Sudan Grass when seeded broadcast or in drills averages about 3 to 5 feet in height and has stems a little shorter than a lead pencil, being about three-sixteenths of an inch in diameter. If grown in rows and cultivated it reaches a height of 4 to 5 feet, and the stems are larger than usual, being about one-fourth of an inch in diameter. The panicle is loose and open. It is said to be very good for growing in mixtures with Cowspea and other legumes, as it’s stiff stem supports the vines and makes harvesting of the legumes easier by keeping them off the ground. It also allows them to cure more quickly by preventing the leaves from matting. The yields from these plantings are very large and the feeding value of the hay considerably improved, as the legumes are all high in protein.

It does best in hot weather and is not suited to high altitudes. Sudan Grass makes heaviest yields on a rich loam, but it has been grown successfully on almost every class of soil from a heavy clay to light sand. The ground should be firm and well drained.

Sudan Grass after the soil has become warm, about composting time. It may be drilled from one-half to one inch deep. For seed production, sow 6 lbs. per acre in rows and cultivate. When broadcast, sow 16 to 24 lbs. per acre. It may be cut with a mower or binder. Price, Ib. 25c; 10 lbs., $1.75; 25 lbs., $5.50; 50 lbs., $12.00; 100 lbs., $27.50. Bags 15c each, extra.

**SUGAR CANE.**

King, Co., Minneapolis, Minn.

*Note Height and Leafy Habit.*

Sudan Grass. Note its Height and Leafy Habit.

**Australian Salt Bush.** Yields large crops of excellent fodder and silage. Our grower of seed writes as follows: “Salt Bush should not be planted on poor ground or where it cannot be given tillage to start it. After it is established, it is a strong grower and will thrive in poor soil, alkali, heat and drought to an astonishing degree, and will also appreciate good ground and yield accordingly. I have produced nearly 100 lbs. per acre of green forage on good wheat ground, and pays to provide a good seed bed, then drill the seed in thinly, four feet apart, covering slightly and firming down. Keep the weeds out until it gets a start. For dairy pasture it cannot be excelled.” In the North, Salt Bush is an annual; farther south, a perennial, but I find it easier to replant every year.” Two pounds of seed will plant an acre. The variety Australian Salt Bush has never been appreciated even where it has been most grown, and should be given more attention by farmers everywhere. Pkt., 10c; 1/2 lb., 30c; lb., $1.50, postpaid.

**Thousand Headed Kale.** See opposite page.
Cow Peas, Northern Grown. Furnishes good pasture for cattle, sheep and swine, may be used for sowing or hay, but for the two purposes last named it is a little difficult to handle. It has great power to enrich the land by putting in it nitrogen drawn from the air, and since the crop may be grown as a catch crop, an immense future lies before it in enriching the soils. When pastured by cattle, the early pods should be well formed before turning in the stock. When pastured by swine, the crop should be allowed to get nearly ripe. When plowed under as a fertilizer, the plowing should be done when the plants are in full bloom. They are able to grow on nearly all soils except those that remain wet all summer. However, in the Northern sandy and loamy soils are preferable.

Cow Peas are usually sown broadcast at the rate of four to six pecks per acre. When drilled, two to three pecks are usually sufficient when the rows are far enough apart to permit cultivation. Price, pkt., 5c; by express or freight, 10 lbs., $1.10; 50 lbs., $3.75; 100 lbs., $7.00. Seamless cotton grain bags holding 5/8 bushels, each 20c extra.

Cow Peas, Southern Grown. Similar to above variety but later maturing, culture the same. Price, pkt., 5c; by express or freight, 10 lbs., 90c; 100 lbs., $5.50. Bags each, 20c extra.

Soy or Soja Beans, Northern Grown. Valuable for hay or feeding food for cows, hog and sheep pasture, also green manure. They resemble the navy bean in general appearance. Like clover they are great soil enrichers, gathering in nitrogen from the air and storing it in the soil. Many tests show that they may be grown wherever corn will ripen. The Northern grown beans are harder and mature earlier than the Southern ones. They should be planted after corn in rows 2-1/2 feet apart with six to 8 plants to the foot of row. If grown for the beans, requiring about one-half bushel of seed per acre. When grown for hay, it is preferable to plant the rows closer together or sow broadcast, at the rate of 40 lbs. per acre. Price, pkt., 5c; by express or freight, 10 lbs., $1.20; 50 lbs., $7.75; 100 lbs., $14.00. Seamless cotton grain bags, each 20c extra.

Soy Beans, Southern Grown. Culture and description same as for the Northern Grown Beans, except that the Southern ones may make a ranker growth and mature later. Price, pkt., 5c; by express or freight, 10 lbs., 90c; 100 lbs., $5.50. Bags each, 20c extra.

Sunflower, Mammoth Russian. Sunflowers are especially useful in the poultry run as the large leaves furnish shade for the young chicks, also the seeds make a good addition to the poultry ration. They are very rich in oil and protein and are splendid to feed during the moulting period and winter months. They are also valuable for hogs. Sow the seed in rows far enough apart to admit of cultivation. 2 to 3 pounds will plant an acre and the plants will grow from 6 to 10 feet high and will be liberally covered with large heads well filled with seed. Large pkt., 5c; 1/2 lb., 1lb., 5c; postpaid. By express freight, lb., 15c; 50 lbs., 5c; 10 lbs., $1.90.

Feterita. A wonderful new grain which has attracted considerable favorable attention in Kansas, Missouri and Oklahoma. It belongs to the Sorghum family. It was introduced from Argentina by the United States Department of Agriculture. The advantages claimed for Feterita are its drought resistant qualities, its heavy yield, its earliness, its rooting properties and its freedom from insect pests. It is a medium height and yields equal to Kaffir Corn in feeding value. Feterita successfully withstands the dry weather in Kansas and nearby states during 1918 and yielded under these unfavorable conditions, 35 bushels per acre and more. Under proper conditions, it will yield 40 to 75 bushels to the acre. It begins to flower very freely from the roots, making from three to eighteen heads from a single stalk. It is from two to three weeks earlier than Kaffir Corn and should successfully mature in the North. Culture same as for Kaffir. The chitted seeds will contain other crops, but seem to leave Feterita entirely alone. Price, lb., 20c, postpaid. By express or freight lb., 10c; 10 lbs., 5c; 100 lbs., $3.90. Bags each, 20c extra.

Kaffir Corn. Grows 4 to 5 feet high. The stem or stalk bears numerous wide leaves. The stalks are brittle and juicy, not hardening like other varieties of sorghum. It makes excellent fodder, either green or dry, which is highly relished by cattle and all kinds of stock. The seed is also heavy, sometimes 20 to 60 bushels to the acre. For fencerow, sow 1/4 to 1 bushel either broadcast or in drills. Large pkt., 5c; lb., 20c; 3 lbs., 50c; postpaid. By express or freight, 10 lbs., 50c; 50 lbs., $1.55; 100 lbs., $2.90.

Cow Peas. Note the Long Trailing Vines.

Thousand Headed Kale. This is a variety plant 5 to 6 feet high which has three feet high. The stem is covered with leaves which turn small heads. Animals, especially sheep, eat it greedily. It grows well on most any land and is hardy. The seeds may be either drilled or broadcasted, but it is better drilled. When drilled in rows 20 to 30 inches apart, so that plants may be thinned out so as to stand 16 to 18 inches apart in the rows. In drilling use 4 to 5 pounds of seed to the acre. In broadcasting 10 to 15 pounds of seed are required. Price by mail, postpaid, large pkt., 5c; 1/2 lb., 20c; lb., 5c. By express or freight, lb., 10c; 10 lbs., 90c.

Peanuts, Iverson’s Improved. This variety combines earliness, large size and prolificness with larger imperfect pods and less “pops” than any other sort. Peanuts can be successfully grown in almost any place where Corn succeeds. Every part of the peanut is useful. The vines are a valuable feed for hogs, cattle and sheep. An acre will feed from one to two tons of vines. The nuts are relished by nearly everyone and are sold in the South for food. They contain a large percentage of rich nutrients. Peanuts do best on a light sandy soil, but open soil will do. The ground should be plowed deeply and thoroughly harrowed. Careful tillage is important. All weeds and grass should be killed to give the plants all the food they can. Seed peanuts should be carefully hulled to prevent the breaking the skins on the kernels. The nuts should be planted in rows two and a half to three feet apart and ten to twelve inches apart in a row. Cover with about two inches of earth. When they are matured, pull them up and expose them for a few days. The benefit to the land in growing Peanuts is nearly equal to growing clover. Price, lb., 30c; postpaid. Write for special price in large quantities.

Peanuts, Small Early Spanish. This variety, although small, is best suited for growing in the North, being earlier than other sorts. It yields enormously, pods that are solid and unusually well filled. As a consecration it is a great deal more delicious than the larger varieties. In the South, it is grown extensively for forage, especially for fattening hogs and other live stock. The stalks and nuts of this variety together make a complete grain ration, but the stalks fed alone are also very valuable. Seeds should be planted in drills, 3 feet apart, 1 to 3 inches apart in the row. Plant is of upright, bushy growth, making cultivation easy. Prices, pkt., 5c; lb., 30c, postpaid.

All prices on this page are subject to market changes. See the Red Figure Price List enclosed in this catalogue or a new one will be sent at any time upon request.

Peas and Beans. For Hogs. By Prof. Shaw. $1.00.

"Nifragin" for inoculating Cow Peas, Beans, Alfalfa and Clover. Page 149.
FIELD PEAS

PRICES. For prices on Field Peas see our Red Figure Price List which is enclosed in this book.

Prices on field and grass seeds subject to market changes. New price list sent anytime upon request.

"Peas could be made to bring more nitrogen to the soil than is now purchased annually by the farmers at the cost of millions."—Yearbook of the U. S. Department of Agriculture.

The above statement, coming as it does from a reliable source, gives the progressive farmers of this great Northwest something to think about. Grain has been grown year after year on many farms, sapping the life and fertility of the soil. Here is a crop which is not only profitable but will return to the land the much needed nitrogen. Peas are sown only to Clover in their soil enriching properties and can be grown under almost any condition of soil or climate. There is always a ready market for Peas, or they can be profitably ground and fed to stock. The vines make rich, nutritious hay. If fed to milch cows, when green they increase the flow of milk. Peas are a paying crop and can be profitably planted in many ways. First, when sown alone about three bushels are required to the acre. They can be matured and threshed when dry. The yield will vary from 30 to 60 bushels an acre.

Second, Peas and Oats are frequently sown together, using 1 1/2 bushels of peas and 2 bushels of Oats an acre. By so doing a double crop can be secured. They can be threshed at one time and readily separated in cleaning.

Third, they can be sown alone or with Oats and fed green. It is surprising the amount of fodder which is produced in this way. If sown together, sow Peas first and plow under for yards; then drill in the Oats.

Fourth, for plowing under when Peas and Oats are sown together and each are "in milk," they are nearly equal in value to Clover, used in the same way, to enrich the soil.

Golden Vine Field Peas. Height of vine, 3 1/2 to 4 ft. A fine, vigorous variety. This strain is especially desirable on account of the heavy yield. On good soil it gives a very heavy crop and yields well on poor land.

Canada Field Peas, Yellow. Height of vine 3 1/2 to 4 ft. This is a standard variety of Field Peas and needs no special description. This variety is extensively grown in Canada, Wisconsin and other Peas growing sections, and has a large sale, not only for agricultural purposes, but for use in soups. It is also used for pigs and poultry. It is also used for pigs and poultry.

Canada Field Peas, Green. Height of vine 3 1/2 to 4 ft. Of the same general character as Canada Yellow Field Peas. Used for the same purposes, but the seed is green in color instead of yellow.

Scotch Peas. Sow one to one and a half bushels per acre with Oats for support.

VETCH

Sand or Winter Vetch. (Vicia villosa.) Sometimes called Hairy Vetch. This is a very valuable forage plant and is rapidly becoming more popular each year as the farmers of this country are learning more of its great value. It is very hardy, is valuable as a winter cover crop to prevent leaching, and for forage and fertilizing purposes. It is an annual, but re-seeds itself and will come up year after year on the same ground. It succeeds well on nearly all soils and thrives surprisingly on poor, light sand and will endure extremes of drought, heat and cold. It improves the soil, being a great nitrogen gatherer. The roots bear innumerable nodules or nitrogen-gathering bacteria. These take the nitrogen from the air and restore it to the soil where it is so much needed. It belongs to the Pea family, but the vines are much longer and the foliage is more abundant. The vines in the illustration were from the second crop and measure five feet and seven inches in length. These plants were grown within a few miles of Minneapolis, on the farm of Mr. James J. Hill. It may be sown either in the Spring or Fall with about half a bushel of Rye or Oats for support. It grows rapidly and is particularly valuable in sections where Clover does not thrive. In the North it remains green all Winter under the snow and it is invaluable for early pasturing or sowing. The Department of Agriculture estimates the value of an acre of this Vetch planted under equal to commercial fertilizer at the rate of from $16 to $19 an acre.

Spring Vetch. Known also as Tares. English Winter Vetch, Oregon Winter Vetch or Common Vetch. Used for the same purpose as the Sand Vetch but must be planted in the Spring wherever the Winters are severe as this variety is not so hardy as Hairy Vetch. It succeeds wherever Canada Field Peas thrive. If sown and if so, one to one and a half bushels of Vetch and 40 lbs. of Oats are usually seeded.

Spring Vetch thrives in a well-drained soil, doing best in loams or sandy loams though excellent crops are grown both on sandy and gravelly soils. On poor soils special care should be taken to provide thorough inoculation. (See page 149 for Nitrogen.) It is adapted to a variety of uses such as hay, green feed, seed pasture and green manure. Large pkt., 5c. By express or freight, lb., 20c; 10 lbs. @ 15c per lb.; 50 lbs., $5.75; 100 lbs., $17.50. Bales, each 20c extra.

Prices on field seeds subject to market changes. See page 149 for "Nitrogen."
THREE RELIABLE BRANDS
And What They Mean to You.

The three brands illustrated here were adopted for the protection of our customers. It will be to your interest to know them. Wherever you see a bag branded with one of these designs you can rely upon the quality of seed it contains, whether it is Clover, Timothy, Alfalfa, Bluegrass or any other variety.

These brands are being advertised throughout the Great Northwest and people are demanding grass and field seeds bearing one of these trade marks.

Why run the risk of sowing unknown seed of doubtful purity and germination when you can procure such dependable seeds as these?

Following is a brief summary of what these three brands stand for:

Northrup, King & Co.'s
Sterling Brand Seeds.

For those who want the best. Unexcelled for purity, germination, plumpness and color. Sold only in sealed bags. Look for the Sterling trade mark.

Every bag of Grass or Clover seed put out by us under the name Sterling, will be sold only in our sealed bags—every package bearing our name, our trade mark, and sealed at the top with a metal seal. None other is genuine. As the contents of a bag cannot be identified once the seal is broken, purchasers should always insist on getting our original packages.

Northrup, King & Co.'s
Northland Brand Seeds.

The greatest value for a reasonable price, of uniformly superior quality, carefully selected for high purity and sound germination. The Northland Goose is on every bag.

Northrup, King & Co.'s
Viking Brand Seeds.

Lowest in price, consistent with dependable quality. Strictly regraded and tested for purity and germination.

Our Prices. Please Read Carefully.

In order that you may have this catalogue as early as possible in the season we are preparing this part now, in November, before the market has fully established on grass and Clover seeds.

For this reason we are unable to quote prices on the following pages, but all items will be offered on our Red Figure Price List which will be included in this book at the time of mailing.

These prices are all subject to market changes so we have decided to issue throughout the season, as frequently as market conditions seem to render it desirable, a Special Red Figure Price List, which will keep customers in touch with the actual value of seeds. We shall not scatter these special Red Figure Price Lists indiscriminately, but will promptly mail a copy of same upon receipt of a request for it, from those who wish to buy Grass and Clover seeds. Remember, a postal card will always bring one to you by return mail. Write us for it when you are ready to buy. These prices will be maintained as long as possible, but we reserve the right to forward seed to the value of the money sent us, according as the market is higher or lower.

We wish to assure those who buy late in the season and have not time to write us for prices, that they will receive fair treatment at our hands, and unless otherwise advised we will reduce or add to the quantity ordered sufficient seed to give value for the amount of money remitted. We cannot emphasize the fact too strongly to those who do not wish to buy now, that it is to their advantage to write for our Special Red Figure Price List, and samples of our Sterling brand of any variety of seed they want. A very large percentage of our customers now purchase our Sterling brand (sold in sealed bags only) of Grass, Clover and Millet seeds exclusively, and will not have any other. They have found it to their interest to pay a little more for this brand and be absolutely assured that they are getting as fine seed as money can buy.

What the Microscope Reveals.

The photographs shown on this page are all magnified several diameters to more clearly demonstrate that which is not fully understood by those unfamiliar with the handling of Grass and Clover seed. The pictures numbered 1, 5, 9 and 7 are Northrup, King & Co.'s Sterling Brands of Medium Red Clover, Timothy, Aisike Clover and Montana Alfalfa respectively. It will be noted how pure and plump are these brands of seeds. On the other hand, the pictures numbered 2, 4, 6 and 8 are ordinary grades of seeds commonly offered on the market. The magnifying glass readily detects the weed seeds of all kinds, broken stalks and straws, immature, brown and shrunken seeds, dirt and refuse which are not only of no value, but prove of considerable loss and harm. These impurities must be removed until placed under the microscope. To avoid the sowing of doubtless quality seed on your land and to receive real value for your money, it is always good judgment to purchase one of our three reliable brands.
FACTS ABOUT CLOVER

Minnesota and Northern Wisconsin now produce the finest quality of Clover seed grown in the United States, and seed commanding the highest prices for the export trade.

The Fertilizing Value of Clover. This plant is familiar to all farmers, in a general way, yet there are many things in regard to its habits, variations and other peculiarities yet to be learned. The expression, "To live in Clover" has become proverbial, and immediately suggests fat cattle standing knee deep in a rich Clover field. Someone calls the plant "The red plumed commander-in-chief of the manorial forces." Many authorities agree that "Clover is the best manure a farmer can use." It is practically a "trap for nitrogen," as it collects it from the air and supplies large quantities of nitrogen in a form ready to nourish growing crops.

Clover hay or sod contains enough phosphoric acid for more than double an average crop, enough nitrogen for more than four a acreage crops, and potash for more than six average crops of wheat!

A two ton crop of Clover, when plowed under, will supply more nitrogen to the soil than twenty tons of fresh straw, manure or twelve tons of ordinary barn-yard manure.

Clover roots are stronger and more numerous and more leaves fall on the ground, where it is grown for seed, than when it is grown for hay; in consequence more nitrogen is left after clover sod than after hay, which accounts for Wheat yielding a larger crop after Clover seed than after hay.

Its Feeding Value. At the Wisconsin Experiment Station Red Clover has yielded the great amount of twenty-five tons of green forage per acre. From one-half to two-thirds of this yield may be used upon by the stockman as a fair crop under average conditions.

Clover gives the largest returns of protein, the flesh and blood building element in foods, when the heads are in full bloom or just past that stage. Thus the crop would need to be cut when in full bloom to make the richest hay. It is true that Clover hay is easier to cure if not mowed until the blossom heads are all brown, but such hay loses much of its feeding value. So, considering both factors it is best to cut Clover for hay when one-third of the heads are turning brown. Clover hay is exceedingly valuable for cows. It furnishes the large amount of protein and ash essential for milk and is palatable and much relished.

With well-cured Clover hay forming one-half or two-thirds of the nourishment of the ration, the dairymen can cut down the amount of grain, thus reducing the cost of feed.

Northern Grown Clover Seed. By using northern grown seed, Clovers may be established in sections where, until recently, it was not thought possible for them to survive. They are now grown even in North Dakota, close to the Canadian line. This means that the producer and sale value of these lands is increased many times. Northern grown seed is also more productive.

Some time ago, one of the most prominent seed dealers in Indiana (one of the largest Clover states) insisted upon buying a carload of northern grown seed. Although we told him that we did not have enough for our regular trade, he finally said, "I must have it. I have some customers who will buy nothing else." Then he described some of his own experiments in which he had discovered that northern grown seed gave quite twice the yield of the hay, that Indiana seed produced when grown on adjoining fields under the same conditions. His conclusion was, "If I were farming, I would not use any but northern seed if I could have other seed as a gift!"

Our Clover seed being grown in the North inherits three essentials for successful Clover production:

1. Earliness, because of the short season in which it matures.
2. Hardiness, because of the severe conditions which it survives—extreme cold of winter, frost and thawing in Spring and Fall.
3. Heavy yields, as has been demonstrated by comparative tests with Clover seed grown elsewhere.

About Quality of Clover Seed.

A large and increasing proportion of the orders we receive for Grass and Clover seeds is for our Sterling Brand, because of the fact that our customers have learned that the best seed is the most economical, regardless of the cost. Seed cleaned for our Sterling Brand must in every instance, come up to a certain standard before it can be sold as Sterling and no seed will go out under that name that is not of absolutely known quality. Every year, however, there are some sorts which, owing to climatic conditions, are never produced of a quality sufficiently good even with proper cleaning, to equal Sterling. In such instances we offer our customers the very finest grade that the season has produced. We will cheerfully submit for comparison samples of all grades when desired.
CLOVER SEED.

Prices. The Clover Seed market is so unsettled that we are listing no prices on Clover in our catalogue. For prices on all varieties, see our Red figure Price List which is enclosed in this book. These lists are dated. As prices change frequently, a new Red figure Price List with latest quotations will be mailed you free of charge, at any time, upon request.

Medium Red Clover. This is regarded as the most valuable of the Clover family. It is sometimes called June Clover and is a dependable all-round variety for farmers and stockmen. It makes two crops each year. The first is usually cut when it is in blossom for hay; the last crop may be harvested for seed, cut for hay, or plowed under to add fertility to the soil. It may be sown either in the Spring or Fall and if no other grasses are used, at the rate of from 8 to 12 pounds to the acre, according to quality of seed used and condition of the soil. Clover adds greatly to the fertility of the land on which it is grown. It does not exhaust the soil, but enriches it. It pays always to buy the best quality of Clover seed which can be obtained. Even though the first crop is twice as much cheaper seed, it will be found in the long run that inferior seed is the most expensive, not only on account of less hay or seed being produced from it, but from the fact that once a land becomes infested with weed seeds which decrease the value of the land on which they are growing. Our booklet on Clover contains information of value to every farmer and stock raiser. It will be sent without charge, upon request.

It has been demonstrated time after time that crops following a growth of Clover are larger and of better quality than when grown on land which has produced the same crop for a series of years. Clover should be rotated with grain crops every three to five years. The small nodules or bacteria which cling to the roots of Clover possess the power to draw the nitrogen from the air and store it in the soil where it is most needed and where it can be drawn upon by subsequent crops. It is well to sow Clover with every crop of hay. It serves to keep the ground free from weeds, restores fertility, and may be pastured in the Fall, or will repay the grower, even if put to no other use than to be plowed under as a green fertilizer. Sow Red Clover Seed and plow it if fine. For price see our Red figure Price List enclosed in this catalogue, or a new one will be mailed promptly on request.

Mammoth Red Clover. This is grown largely for pastures and meadows, to restore fertility to depleted soils. It makes good hay if cut soon enough although it has a coarser stem than the Medium Red Clover. Mammoth Red Clover supplies fine grazing for stock. It sometimes yields more seed than Medium Red Clover. Being a rank grower, it is very valuable for fertilizing purposes. The foliage, flower and stem are a much darker color than the Medium Red Clover. It blooms later, and makes only one crop. Especially valuable on light, sandy lands. Eight pounds of Sterling brand seed are sufficient to sow an acre on good ground. For price see our Red figure Price List.

Alsike or Swedish Clover. This is one of the hardest of the Clovers to grow but is also the most valuable. A biennial and does not winter kill. It will do better on moist land than any other variety of Clover, and is suitable for either hay or pasture. When sown with other grasses, it forms a thick undergrowth and greatly increases the yield. It is frequently sown both with Medium Red Clover and with Timothy, and the quality of the mixtures has been very good. It is fine and more leafy than Medium Red Clover, although it does not grow so tall. It is very suitable for or planted in the nurse plots of Alfalfa. For price see our Red figure Price List.

For Alsike and Timothy Mixed see page 151.

White Blossom or Bokhara, Medicago Albula. This lives two years and then dies. It is the variety commonly referred to when "Sweet Clover" is mentioned and is the best for general use. It is an erect branching biennial plant with woody stems, the first season growing 1½ to 3 feet high and developing a large root, in which is stored food material for the second season's growth. The second season usually reaches a height of 4 to 7 feet. It bears flowers and seed the second season and then the plant dies, so it is readily controlled by cutting it before it goes to seed, which will prevent any seed being self-sown. Culture. Sow the seed at the rate of 15 to 20 lbs. per acre, with a nurse crop of grass, or alone, in light, sandy soil. If soil is heavy, a field of April or May is best. It is better to keep the ground covered with clover, as it is not so hardy as other clovers. It will stand some degree of shade. See page 65 for the method of protecting the clover seed and centering it for planting in the nurse plots. It is a splendid feed, about equal to Alfalfa. It roots deeply and places in the soil an abundant supply of nitrogen. Grows luxuriously on fertile loam and does better, as a rule, on poor or thin soil than Red Clover. When plowed under it adds fertility to the land, and is especially good where the soil is light. It is not so good for hay as Red Clover.

SWEET CLOVER.

Alfalfa's Twin Sister.

Crimson or Scarlet Clover. An annual of strong, erect growth. It is widely grown for hay and pasture. It has a shorter stem than any other. It is a red clover. It is very much used for hay and pasture. It is planted in the nurse plots of Alfalfa. It is a splendid feed.

Alfalfa. Valuable for Both Pasture and Hay, Especially in Combination with Timothy.

White or Dutch Clover. A low, close growing Clover; round, stately, and fragrant. It is very useful for beautifying the lawn. It will stand close cutting and very rapidly throws up an abundance of leaves and blossoms. It is usually better to sow with other grasses. Does well on most any soil. Ox., 10c. 5½ lb., 25c lb., 60c. If wanted by mail add per ounce at rates on page 1. See our Red figure Price List for prices.

Yellow Blossom. Medicago Officinalis. This variety belongs to the family of clovers, but it is not so prolific in growth, will not produce so large a tonnage, does not grow as tall, nor will it produce sweet clover hay; in fact, it is three weeks earlier. The flowers are yellow instead of white. For bee pasture and fertilizing purposes, we believe it to be equally valuable, but for hay or pasture it is not so desirable. See our Red figure Price List for prices.

"Nitragin" for inoculating Clover will be found on page 149.
FACTS ABOUT ALFALFA.

The U. S. Dept. of Agriculture says: "In addition to the hay crop, Alfalfa at two years adds $100 to the value of every acre on which it grows."

There is no state in the Union in which Alfalfa cannot be successfully grown.

Alfalfa seed varies from 3 to 7 tons of hay to the acre.

It has as much protein as Wheat bran.

300 stalks have been grown from one seed.

It does not exhaust the soil, it enrichs the soil.

It will grow 3 to 6 acres a year.

Alfalfa in money value is worth 45 per cent. more than other Clovers and 60 per cent. more than Timothy.

Ten milch cows can be fed on less than 2 acres by soil ing.

One acre will pasture 20 pigs for 6 months. Three pounds a day makes a full feed for fattening lambs.

Four to five pounds makes full feed for fattening aged sheep. Thirty-five pounds makes full feed for fattening steers.

Sheep fed on Alfalfa, will gain from 8 to 15 pounds in 73 days, and will double with small grain ration added.

Lambs wintered on Alfalfa will produce one to two pounds more of wool than when on the range.

Fed to dairy cows Alfalfa maintains the flow of milk equal to June grass. It can be chopped fine with corn meal. Such a mixture is worth more a pound than the original corn meal.

Many interesting facts in addition to the above might be cited about Alfalfa. It would hardly be possible to say too much about Alfalfa, it is a working plant which is changing the destiny of many farming sections.

"Its long, branching roots penetrate far down, push and crowd the earth this way and that, and thus constitute a gigantic siloer. These become an immense magazine of fertility. As soon as cut, they begin to decay and liberate the vast reservoir of fertilizing matter below the plow, to be drawn upon by other crops for years to come."

From its original home in Asia, Alfalfa has been carried to all parts of the world where agriculture is important. The name "Alfalfa" is Arabic for "the leaf's odour, because it gets its nitrogen from the atmosphere." Such a mixture is worth more about the same than the original corn meal.

Characteristics. One of the most important characteristics of Alfalfa is the long tap roots. It can extend fifteen feet or more foot into the soil. Unlike most farm crops, Alfalfa makes nearly all of its growth below ground. The deep growing roots penetrate the sub-soils and bring to the top soil the phosphorus and potash stored below, making them available as plant food for the succeeding crops. After the great roots decay they form passages for air and water, besides leaving openings for the roots of the next crop.

As a soil builder, the Iowa Experiment Station claims that an acre of Alfalfa adds over twice as much nitrogen to the soil as the average acre of Red Clover. Nitrogen is the most important element in the soil and the one most likely to give out. Alfalfa does not ask the farmer for nitrogen he gives it, but demands it and makes it available.

Few general rules can be laid down for Alfalfa culture since different conditions require different methods. One must study the requirements of the plant and treat the land to meet these needs.

In order to find out in the shortest time what treatment any particular land needs, whenever the right exists, it is well to plant quarter acre test plots, using one on a plot, a liberal dressing of manure and lime on another, manure and lime on a third and no manure on the fourth, as a check on the first three. The method giving best results can be applied to a large acreage the succeeding season.

Here the proportion of growing and time of seeding are important factors, the experiments can be made along these lines.

RULES FOR SUCCESS.

1. Plant in deep, loose, friable soil. If the soil is shallow the Alfalfa plant cannot utilize its deep-feeding root system and is likely to be checked out by surface feeding weeds. The roots can, however, penetrate rather stiff, clay soils and sometimes go through hard-pans. Soils that are light in texture having sandy usually lack fertility, but this can often be corrected by the free use of manure. Good fields are sometimes found on heavy clay soils. The seed bed should be fine on top, but well settled. It usually requires six weeks for plowed land to settle enough for seeding. The land should be disked and harrowed eight or ten days before sowing, then work it every ten days or two weeks until the seed is sown; this will insure sufficient moisture for germination. When late seeding is practiced, begin to cultivate as soon as the preceding crop is removed.

For some soilsisking is sufficient. This is of course less expensive than plowing and it does not take so much time for the land to settle as it does for the plowed land. The preparation must be uniformly good, as the poorly prepared spots are sure to fail and become weed landers. Summer fallowing is often practised in the semi-arid regions to conserve moisture for germination of seed at planting time and destroy weeds.

For sandy ground apply a top dressing of straw or coarse manure just before seeding to prevent the soil from drifting, or sow the Alnaf in a thin stand of small grain, such as barley.

2. The soil must be well drained. Alfalfa does not thrive where the water tables are within six feet of the surface.

The land must be well drained, either naturally or by the use of tile or open ditches. Five results have been obtained on drained bottom-lands. Land slightly rolling on early level and well drained is usually considered the best. Alfalfa is often killed by overflow from streams. During the growing period it will not usually stand more than twenty-four hours of complete submersion or forty-eight of partial overflow.

When sown on land with dry sub-soil, the roots penetrate for a few inches through the moist top soil and then reach the dry, hard sub-soil located perhaps at the bottom of the furrow alone. Being unable to penetrate this dry soil, the roots stop growing or run horizontally in the bottom of the furrow, thus forming only a shallow root system. To prevent this condition, either a deep furrow should be made before the Autumn of each year, or six weeks for the ground to settle before planting Alfalfa in the Spring.

3. The soil must be very fertile. Well rotted, barnyard manure is usually the most satisfactory fertilizer for Alfalfa. Fresh manure often contains weed seeds, so when its use is necessary it should be applied to the preceding crop so as to give the germinating weed seeds time to be destroyed by cultivation. Eight to ten tons of good manure per acre should be applied before planting. Flowing under green clover crops helps to increase the humus content in the soil and this is what many soils require. For the Northwest, Red Clover is probably best for this purpose.

This should be followed with some clean-culture crop, like corn or potatoes. If barnyard manure is not available and if there is not time for a green manure crop, place straw as a substitute for the necessary living food.

Alfalfa when established is a very strong grower, but when the young plant starts it is a weak grower. There may be no available food, in order to make a good growth the first year. Then it will develop a shank or tap root which will help it winter well and start vigorously the following year.

4. Inoculation is necessary. Inoculation means putting or planting in the soil, nitrogen-fixing germs or bacteria without which the Alfalfa cannot flourish. Where Sweet Clover grows wild, in the field or along the road side, the natural inoculation is not necessary as the same germs grow on the Sweet Clover as on Alfalfa and natural inoculation takes place. But there is no other plant which commonly grows wild in the North that can support the same germs as the Alfalfa. All the legumes including the peas, beans and clovers are the result of inoculation with a strain of bacteria which forms nodules on the root of each plant.

These germs on the Alfalfa roots form nodules from the size of a pea to the size of a nut. See illustration of nodules on an Alfalfa root on the opposite page. Each nodule is a living granary, which store nitrogen from the air and form nitrates. From these the plants draw nitrogen. The plant roots draw their nitrogen from the atmosphere, but the plants cannot use nitrogen directly from the air except to a very limited extent. Thus the germs on the roots prepare plant food.

Plants are so well endowed with fixing nitrogen out of the air that we recommend the use of Nitrate as described on the opposite page.

Hogs in Alfalfa Pasture. An average field will support 10 large hogs during the growing season.
Another form of preparation is to sow a few pounds of Alfalfa seed on the field two or three years before it is intended to seed a regular Alfalfa crop, putting it in with grain, clover or any other seed used. If this is understood, it often pays to plant a small amount of Alfalfa six months to a year before the regular crop. Probably the seed carries a few germs, and in time these plants will often develop nodules.

8. Use Lime for soil acidity. Alfalfa will not grow where the soil is acid. This is often the case where corn and wheat have been raised for many years. A simple test for acidity is to make a deep cut in the ground with a knife, pressing the earth slightly apart, then push a piece of blue litmus paper (procured at any drug store) into the opening, press blue to red to test it is acid. This test should be tried in several parts of the field. Lime is the principal material needed to sweeten acid soils. It is also necessary for plant growth as nitrogen or phosphoric acids. If agricultural lime is not purchased, you must have it made by a local lime manufacturer.

9. Sow the seed so it will be covered. Alfalfa Seed must be covered, not sown on the surface as it is sometime done with grasses and clovers. It is practiced with ditches, water courses, sand, hand seeder or wheel barrow seeder. It is advisable to sow half the seed so it will be covered on the land and half the earth cover to prevent an uneven distribution. Sow the garlic in the fall and spread the planting depending on the parts of the field. Some three to one inch deep is usually sufficient on clay soils, but one and one-half inches deep on sandy soils. The top dressing is made by sowing broadcast a light, narrow, weeder or brush is used to cover seed.

10. Use plenty of seed. Much more seed is required in the humid sections and all the country the Alfalfa is used as a manure crop. The stand of a one pound of seed per acre is not rare in the West. For the same reason, a larger amount of seed should be used in the following:

11. Using a nurse crop often advisable. Weeds are likely to prove troublesome for Spring seeded Alfalfa unless the ground is clean from previous seeding. A weedy field when the Alfalfa Seed starts. The nurse crop takes some of the moisture and plant food from the ground, helps to control weeds, and also gives the Alfalfa with little additional expense, except the cost of the seed. Moreover by this method it is not necessary to give up the use of the land for a few years to get the Alfalfa started.

Barley, wheat or rye are better for a nurse crop than oats. Oats require more water and give too much shade. Do not sow Alfalfa seed with the grain, but plant each separately. Reduce from one-third to one-half the usual quantity of seed sown for a nurse crop.

Our Alfalfa Booklet describes treatment of root planting. See the next page for particulars.

The IMPROVED GERMAN SOIL INOCULATOR NÖBSE-MILTNER PROCESS

PURITY CULTURE

The SIMPLER SUREST SYSTEM OF SOIL INOCULATION FOR ALL LEGUMES

AWARDED GOLD MEDAL, ST. LOUIS, 1904

Nutrogen gathered by the germs, or bacteria, is stored in knobs, or nodules, on legume roots. Pure Culture is the only one that goes to the farmer who can be trusted to do a serviceable job. Experiments prove inoculated legume crop returns to the soil a vantage per acre of 125 pounds nitrogen.

Nutrogen or Nitrogen is the trade mark name for the special germ, or bacteria, that acts on the legume root, drawing from the air the nitrogen so necessary to plants. "From the atmosphere give the legume, the crop grows quickly; it is strong, hardy and healthy—deep-rooted—rich in food value. Meanwhile, what you have done instead of poorer—your land more valuable. Failure with legumes is often due to a lack of bacteria.

Nitragin helps to insure a catch of Alfalfa.

if your past experience with these crop has been because your soil lacked these vital, strengthening germs. Some soils have only a partial supply: in other soils the germ is missing or so sickly as to be worthless. Such soils need Nitragin Pure Culture to supply an abundance of pure healthy, strong, virile bacteria. This means a profitable crop and new life to the soil. Nitragin Pure Culture has been used abroad for seventeen years. Last year it was tried in a million acres. This year you should use it on your Alfalfa and other legumes.

Nitragin solves the Alfalfa inoculation problem, helping to make legumes growing more profitable. Successful inoculation depends in great measure upon the number of germs available. In mixing with seed some germs adhere to the floor or box; others are lost in transferring seeds to drill or planter. Authentic results are not obtained and are killed by the sun. Some are destroyed by other unfermented seeds that live in certain soils. So the extraordinary number of germs in Nitragin Pure Culture is needed for those lovers and insures success, even under adverse conditions, where others fail. Each can of Nitragin contains billions of these necessary germs in a strong, healthy condition, bred up to the highest possible state of efficiency, packed for nutrient as the world has ever attempted for six months. Nitragin is easy to use. Simply mix with water and spread on the seed.

A boy or child is dry, Plans and Sows the Seed, following the germs to obtain good catches—uniform, even stands; strong, healthy, deep rooted, sturdy plants that survive the winter and furnish half liberal export of legumes better crops—heavier yields of richer feeding value. Alfalfa, clover, Soy Beans, Cow Peas—in fact, any seed legume can frequently be treated with Nitragin at a great profit. The cost is nominal. Dr. Lipman, of New Jersey State Agricultural College, states, Nitragin is wonderful. Dr. Lipman says: "Alfalfa yield increases due to Nitragin was 500 per cent.

Pure Culture System endorsed by many Authorities.

The Pure Culture inoculating legumes is endorsed and recommended by all Government authorities, by state experiment stations, by practical farmers and other agricultural experts in every section of the United States and Canada; it has accomplished a wonderful results with inoculated legumes. You can do the same on your farm by using Nitragin.

There is a special strain for each legume, including Alfalfa, Red Clover, White Clover, Alsike Clover, Peas, Vetch, Dutch Grass, Poa, Quinoa, and many others. In ordering be sure to name the crop to be inoculated.

Price. Garden size, per can, $1.00; acre size, per can, $2.00; 5-acre size, per can, $9.00. F. O. B. Minneapolis. Postage and express extra. Order Nitragin Pure Culture with your seed.

Nodules, or knots, formed by bacteria on Alfalfa roots.
Northrup, King & Co.'s Sterling American Grown Alfalfa. (Sold only in sealed bags.) Our Sterling Brand Alfalfa, we believe, is the best seed available. This seed is selected from the best seed produced. We will be glad to send a sample to any one who requests it. When writing for samples, state quantity of seed you wish to buy; 10 lbs. or more are customarily sent. The demand for Alfalfa seed has been so great that the crops will not be ready for harvest when all the orders be sent in promptly. Values on all grades will be on our fixed Figure Price List which is issued from time to time during the season and will be mailed promptly to any address on request. The price you name below is that to effect at the time this catalogue is printed and is subject to change. Those wishing to buy Alfalfa seed for large areas will find it to their advantage to write for a special price in large quantities.

Northrup, King & Co.'s Sterling Dakota Grown Alfalfa. (Sold only in sealed bags.) Experiment stations and other authorities all agree as to the advantages of northern grown Alfalfa seed. Even when the seed originally sown was not especially cold-resistant the tenderer plants are soon eliminated, leaving the hardier plants to produce seed. Seed from such fields is always preferable for northern planting to seed produced farther south.

Our Sterling Dakota Grown Alfalfa is especially recommended for northern planting. This seed comes from hard established fields. It is plump, full and fine colored. Our seed was grown at an altitude of between three and four thousand feet, where the rainfall rarely exceeds eight inches per annum. The temperature reaches both extremes, exceedingly hot and very cold in summer and winter, hence seed is produced six months of the year. This produces a very superior seed in winter, with little or no protection by snow. Plants which survive these rigid tests are very hardy plants and the seed produced from these fields inherits the vigorous tendencies of the parent plants.

Prices by express or freight, Northrup, King & Co.'s Sterling Brand, lb., 25c; bu. of 60 lbs., $13.25; 100 lbs., $21.00. Seamless cotton grain bags, holding 2½ bu. each, 20c extra.

Northrup, King & Co.'s Montana Grown Alfalfa. Montana produces a very fine grade of Alfalfa. The seed is grown in Montana, and is especially high germination. Montana's climate is so different from that of any other locality. Our seed is obtained from those sections where plants have endured the severe cold of winter and thrive in high altitudes. Not only has our experience of several seasons demonstrated the superiority of this seed under adverse climatic conditions throughout the entire Northern world, but recent experiments of both the Minnesota and North Dakota Agricultural Stations have established the superior hardiness of Montana grown Alfalfa.

Prices by express, or freight, lb., 25c; bu. of 60 lbs., $15.50; 100 lbs., $28.00. Seamless cotton grain bags, holding 2½ bu. each, 30c extra.

Alfalfa Booklet. This booklet is sent to our customers without charge if asked for on order or for resale. It contains information of importance to Alfalfa growers everywhere but is of special value to those farming in the Northern states, where conditions are so different from those in the South or where Alfalfa is grown under irrigation.

Dry Land Alfalfa. The extension of Alfalfa growing into the dry regions of the Western United States has created a demand for Alfalfa seed especially adapted to those conditions. Seed which has been produced from Alfalfa grown on dry land and without irrigation is of course much preferable to dry land culture to seed produced under irrigation or normal rainfall. It is not always possible to obtain seed grown under those conditions, but we have succeeded in purchasing a limited amount of fine seed which is offered only until our stock is exhausted. The Alfalfa we offer as Dry Land is all its name implies. It was grown under severe conditions of low temperature in winter, usually with little or no covering of snow, and hot weather in the summer.

In case we do not have Dry Land Alfalfa when your order is received, we suggest that you state on your order the variety you may substitute in its place to the value of the money you send us; or, in the absence of these instructions, we will prompt refund your money if we do not have what is wanted. We never substitute without the consent of the purchaser. By express or freight at purchaser's expense, lb. 35c; 10 lbs., $3.00; bu. of 60 lbs., $17.00; 100 lbs., $25.00. Seamless cotton grain bags, holding 2½ bu. each, 30c extra.

Turkestian Alfalfa. This variety has been satisfactory in many sections and has become quite popular. In consequence over six million pounds of Turkrestian Alfalfa seed is imported annually to the United States. This seed is grown on the high table lands of central Asia where the days are hot and the nights cold. It has been successfully grown for years in this country. The Minnesota Experiment Station reports that Turkrestan Alfalfa has given good results in Minnesota. A successful Alfalfa grower has had years of experience in raising Alfalfa near Minneapolis where a temperature of 20 to 30 degrees below zero almost every winter tests the hardiness and vigor of all plant life. Not only low temperatures, but dry winds and little snow protection make winter conditions even more severe here. This grower reports great success with Turkrestian Alfalfa and usually secures three cuttings of hay annually after his Alfalfa fields become established. Owing to unsettled conditions abroad, we have been unable to obtain any seed of this variety this year. If any is available later it will be offered in our Red Figure Price List.

Grimm Alfalfa. Many years ago a man named Grimm came from Germany and settled near Minneapolis. He brought with him seed of an Alfalfa, which according to a neighboring statement, he called Norwegian Alfalfa. He became known, however, as Grimm's Alfalfa and obtained a more local reputation on account of its productive powers, which are given in the following table. For survival Winters that killed out many fields of other varieties of Alfalfa. Of course this was before the Montana, Dakota or any other northern grown Alfalfa seed was procurable.

From the appearance of the seed, Grimm Alfalfa cannot be distinguished from those of the varieties listed above, but shows a variation in which shades of blue predominate, but occasionally yellow, brown or greenish blossoms appear. Neither the presence of variable blossoms nor a uniformity of color proves or disproves the genuineness of Grimm Alfalfa. Some fields of Grimm show all purple blossoms while other varieties than Grimm sometimes show a decided range of color. Some fields of Grimail Alfalfa are in Minnesota in the region where it was first introduced. The climate in Minnesota is not suited to the production of Alfalfa seed. Only occasionally do the plants yield seed and then very sparingly. Because of the wet weather at blossoming time no Grimm Alfalfa seed was raised in Minnesota during 1915 so far as we have been able to learn.

Small patches of Grimm Alfalfa are grown in the Black Hills of South Dakota, among the mountains of Montana, Idaho and Oregon. From some of these we secure limited amounts of fine Grimm Alfalfa seed. See Red Figure Price List for prices.

Nitragin. This is a splendid preparation of Alfalfa bacteria for inoculating the seed before sowing. It is sold ready for use. See page 149.

Alfalfa Hay in the cock. Land values are sure to increase, where three crops like this are cut each year.
TIMOTHY SEED.

Timothy is the best known, most extensively sown and one of the most profitable grasses grown in this country. Having a large bulk of stems, with few leaves, the hay wastes little in transportation. The grass stands up well, the hay is easily cured, and heavy for its bulk. Timothy is very easily established, the seed is inexpensive, and easily sown. It starts rapidly and often yields its best crop the year after sowing. This grass is extremely hardy, enduring extremes of heat and cold. It does best on moist, clay soils.

Characteristics. Timothy has slender, fibrous roots, growing in thickets and never forming a compact sod. Timothy increases by multiplication of bulbs, just as some onions do. Timothy is a hardy, cool season grass. As the plant ripens, nourishment is stored in these bulbs as well as in the seeds. If Timothy is cut too early, the bulbs are weakened and the stand decreases. These bulbs also increase and store up nourishment in the Fall while the aftermath is growing; therefore, it is likely to injure the meadow seriously if it is pastured in the Fall. It should never be pastured unless the aftermath is unusually heavy due to a wet Fall.

Timothy rapidly exhausts the soil nitrogen and so the meadows are greatly improved by a dressing of stable manure or other fertilizer. The latter should contain a large amount of nitrogen. Clover grows well with Timothy and aids it by supplying nitrogen. Medium Red Clover makes a good combination with it and together they form the standard crop for moving and pasture lands on the majority of farms in the northern and middle states. For a mixture of Timothy and Alsike, see below.

Timothy is useful for seeding mountain pastures on ranges in moist areas. It is not suited for a permanent pasture as it will run out in the course of a few years. It is, however, well adapted to early spring grazing as it starts up quickly in the Spring before Blue Grass. The largest crops of hay are raised on rich land. It is not suited for light, sandy soils so well as other grasses.

Harvesting. Timothy hay has a higher feeding value when it is cut early. There is usually a large alnukiance when it is cut before blooming. Consequently, it is best to cut it while in bloom or very soon afterwards. The usual yield is one and one-half to two tons per acre.

Seed Selection. The most important point in the growing of Timothy is the selection of good seed. Poor seed, besides containing weed seed, will grow in the same section where the variety is weak and produce few stalks and seed heads. It should not take an intelligent farmer long to figure the wisdom of investing his time and money in reliable seed, and that means Northrup, King & Co.'s "Sterling" Brand. Only ten pounds of this brand required to the acre when sown alone.

Prices. Owing to the unsettled conditions of the market we are not quoting the price of Timothy in this catalogue. For prices see our Red Figure Price List which is enclosed in this book. These lists are dated. As prices change frequently, a new Red Figure Price List with latest quotations will be mailed you free of charge, promptly upon request.

ALSIKE CLOVER and TIMOTHY MIXED.

Where Alsike Clover and Timothy are grown together, and the seed is saved therefrom, it is impossible, in cleaning, to make a complete separation of the two. On this account we purchase the seed for less money and we can sell it for less than would be the case if a perfect separation could be made.

Those desiring to sow Alsike and Timothy together can save considerable money by buying the seed of these two varieties together as originally harvested. The Minnesota Experiment Station recommends using Alsike in all Timothy and Medium Red Clover mixtures. The Alsike tends to increase the forage crop and in addition will replace the Red Clover as the latter begins to die out, since the Alsike is a hardy perennial and does not easily winter kill.

For hay, the Alsike and Timothy Mixture is very valuable on soils too moist for Red Clover. Alsike is suitable for either hay or pasture. It is finer and more leafy than Medium Red Clover and cattle prefer it. For prices see our last Red Figure Price List.

Of Special Interest to Buyers of Timothy Seed.

The importance of sowing Northern grown Timothy seed of high purity and strong germination should not be underestimated. For many years we have made a specialty of Timothy seed produced in the North. Our buyers select only the brightest, cleanest and best appearing lots. By using the latest, improved cleaning machinery, we have carefully removed dirt, weed seeds and other impurities. For our Sterling Brand we have set a very high standard. We intend that no other seed shall excel it in any respect.

Our Northland Brand our standard of purity is 99.50 per cent. We intend that no other seed shall exceed it in any respect.

Our Northland Brand our standard of purity is 99.50 per cent. No seed goes into our Viking Brand which is less than 99.50 per cent pure. These standards are constantly maintained so purchasers can always be sure of obtaining seed of high quality adapted to Northern conditions.

Typical heads from Northrup, King & Co.'s "Sterling" Brand Timothy. Photograph of Northrup, King & Co.'s "Sterling" Brand Timothy Seed enlarged twenty times. Note the purity, plumpness and freedom from foul seed.
GRASSES

Owing to the unsettled conditions abroad, many of the varieties of Grass Seed listed on this page are practically unobtainable since they are imported mostly from Europe. We have limited quantity of all the varieties quoted, but when these stocks are exhausted they are very difficult to procure. So we suggest you order immediately, to avoid disappointment.

The prices below include sacks and are based on values at time of going to press with this catalogue. They are subject to market fluctuations. If desired by mail, add for postage at rate on page one.

Creeping Bent Grass. (Agrostis Stolonifera) Distinctive rooting stems, of rapid growth, and spreading habit, forming a strong, durable turf. Good for lawns and putting greens because of its fine texture. It sows alone, use 50 lbs. to the acre. We do not expect to have any seed of this variety to offer this season.

Crested Dogstail. (Cynosurus Cristatus) A hardy grass forming a smooth, compact and lasting turf. Does best on rich, moist land, but will grow on most any soil. Roots deeply and withstands dry weather. Does well in the shade. If sown alone, use 30 pounds to the acre; but the best way is to mix with other grasses. Lb., 40c; 10 lbs., $3.50; 50 lbs., $16.50; 100 lbs., $35.00.

English or Perennial Rye Grass. This is becoming well known in this country as a valuable pasture grass which will bear frequent close cropping. Produces an abundance of foliage, which remains bright and green during the season. The hay is relished by all kinds of stock. It will grow well on almost any land but does better on such land as will produce a good corn crop. The plants start early, flower early and repeatedly during the growing season. The leaves are abundant and the whole plant is nutritious. Lb., 15c; bu. of 14 lbs., $1.45; 100 lbs., $8.75.

Fine-Leaved Sheep’s Fescue. (Festuca Ovina Tenuifolia) A very fine-leaved grass. Thrives well on dry and sterile soils. Well suited for lawns. 30 lbs. per acre. Lb., 55c; 10 lbs., $2.20; 50 lbs., $12.00; 100 lbs., $25.00.

Hard Fescue. (Festuca Duriscula) A valuable grass for dry or sandy soils and sandy soils very hardy, enduring extremes of heat and cold and long droughts. Splendid for permanent pastures on poor land. Not recommended for lawns on account of spreading habit. Sow 50 lbs. to the acre. Lb., 30c; 10 lbs., $2.90; 50 lbs., $13.50; 100 lbs., $27.00.

Italian Rye Grass. (Lolium Italicum) This is the true Perennial Rye Grass, valuable for pasture and also for hay. It thrives on rich, moist land, where from three to four cuttings may be made in a season. It grows very quickly when used for close pasturage. About 24 lbs. of seed required to the acre. Lb., 20c; bu. of 14 lbs., $1.60; 100 lbs., $8.75.

Meadow Fescue. One of the best grasses for permanent pasture, early and of rapid growth. Sow 30 lbs. per acre. Lb., 30c; 10 lbs., $4.75; 50 lbs., $22.50; 100 lbs., $45.00.

Orchard Grass. (Dactylis Glomerata) A valuable grass for pastures or hay land, and on account of its earliness is very valuable for a permanent pasture. It furnishes the first green grass in the Spring, so late in the Fall. When closely cropped it grows up very quickly and is ready for grazing again in 10 to 12 days. It will stand drought and is hardy. It grows in tufts, and is therefore best sown with Red Clover, rye grass, etc. It is well suited for shady places, such as orchards and gardens. Sow on all kinds of land and does best on deep, rich sandy loam or clay soils. Sow 12 lbs. to the acre. Price, Lb., 25c; bu. of 14 lbs., $3.25; 100 lbs., $60.00.

Red Fescue. (Festuca Rubra) A creeping-rooted variety forming a close and durable turf and particularly suited for dry, sandy soils. Resists drought and thrives on very poor soils, gravelly banks and exposed hill sides. Valuable for permanent lawns and fair green courses, 30 lbs. to the acre. Lb., 30c; 10 lbs., $2.00; 100 lbs., $24.00.

Meadow Fescue or English Blue Grass. (Festuca Pratensis) Especially suited for permanent pasture and is also fine for hay. Grows two to three feet high but not in tufts like Orchard Grass. The hay is very nutritious and cattle thrive on it whether dry or wet. It succeeds even in poor soil, and as the roots penetrate deep, from 12 to 15 inches, it takes extremely dry weather to affect it. As a fertilizer it has valuable properties. It will endure severe freezing and its use is becoming more widespread each year. 24 lbs. are sown to the acre. Lb., 20c; bu. of 14 lbs., $2.50; 100 lbs., $19.50.

Rhode Island Bent Grass. (Agrostis Galinae) Resembles Red Top, but is shorter and more fibrous. It makes a beautiful, fine, close turf and is one of the best grasses for lawns. It does well on both rich and poor soils. Makes excellent pasture but never grows high enough to supply a great quantity of feed. Sow with other grasses or if alone use 50 lbs. of seed an acre. No time of year varies to offer this season.

Sheep Fescue. (Festuca Ovina) An excellent grass for poor, sandy soils. It is a perennial, densely tufted and of very fine foliage, making it well suited for lawns. It is also very satisfactory for pasture, furnishing good grazing, especially for sheep. Resists drought remarkably well. Sow 40 lbs. per acre. Lb., 25c; bushel of 14 lbs., $4.00; 100 lbs., $27.00.

Tall Fescue. A very early and nutritious; should be a part of all pasture mixtures on wet or clay soils. This valuable grass grows two to four feet in height, generally forming tufts or bunches. The roots are strong and woody, with a tendency to sucker. It is well suited for permanent pasture and is most productive three years after sowing. Lb., 50c; 10 lbs., $4.55; 50 lbs., $21.75; 100 lbs., $43.50.

Tall Meadow Oat Grass. (Avena Elator) A hardy grass of rapid growth, luxuriant, and reaching a height of 4 feet on rich soil by June 20th. Makes excellent hay on sandy loams, but is particularly suited to rich soils and clay formations. If hay is desired, cut when in blossom. It has a wonderful capacity for enduring severe heat, droughts and cold. It can be cut usually twice a year. To make good hay it should be cut immediately when it blooms. This freedom from lodging makes it twice as much hay as Timothy. May be sown either in the Spring or Fall, 2 to 3 bushels per acre. Lb., 45c; bu. of 14 lbs., $3.95; 50 lbs., $18.00; 100 lbs., $35.00.

Wood Meadow Grass. (Poa Nemoralis) Very succulent and nutritious, early and thriving and suited for lawns and pasture land. Admired for its grassiness and lawns. Lb., 60c; bu. of 14 lbs., $7.25; 100 lbs., $53.00.

Various-Leaved Fescue. (Festuca Tenuifolia) Valuable for permanent pasture, and is also desirable in lawn mixtures. Lb., 35c; 10 lbs., $3.20; 50 lbs., $15.00; 100 lbs., $29.00.

Lawn Grass. Seed for all purposes will be found listed and priced on pages 10 to 12.
BROMUS INERMIS. (Awnless Brome Grass.)

This is a native of the Russian Steppes and thus is suited to a cold climate and dry soil. It is strongly recommended by the Kansas, Nebraska and North Dakota Experiment Stations. It is good for pasture, and in some places for meadows—where the conditions are favorable. Brome Grass makes a dense growth of leaves which start down close to the ground. Animals like it well for pasture. Sow and cattle like it the best of any grass.

Brome Grass thickens up rapidly after the early growth. A thin stand thus improves quickly. It forms a dense sod six to eight inches thick, thus binding the soil together and preventing it from blowing away. It is one of the deepest rooted of cultivated grasses. The stems grow erect, attaining a height of four feet or more.

It is drought defying, frost resisting. Yields enormous crops of splendid hay. It adapts itself almost to every condition of soil and climate and to any use to which grass may be put. Forage, if often planted with clover, yields almost any other grass. The roots push through the soil and form fresh plants on every side. It starts from two to three seeds earlier in the spring than native prairie grass and it keeps green in the Autumn longer than any of the useful grasses grown in the West. No amount of cold seems to be able to kill it. It bears up well under hot summer suns. It will grow under conditions that are very dry, and it can also stand being covered with water for a time. It is an abundant producer of leaves and is much relished as pasture and hay. It is about equally nutritious with Timothy. To the country west of the Minnesota border it is probably the greatest boon that has come to it since buffalo grass began to grow. The worth of this grass to the Dakotas and Minnesota is beyond all estimate.

CULTURE. It does best on rich soil and lasts longer when Clover or Alfalfa is sown with it. The Clover or Alfalfa will then keep supplying nitrogen to the soil and thus help to nourish the Brome Grass, which would otherwise soon exhaust the soil's nitrogen. If sown with a nurse crop that crop should be sown thinly. 28 pounds of good Breamseeds will sown an acre. The grass rises sufficient. It grows slowly for a time, hence the farmer should not be hasty in conclusing that he has failed to get a stand of the grass.

The Nebraska Experiment Station recommends sowing the seed as deep as possible. This is the case with the heavier kinds of grass. It is quite true that in some cases the grass will not grow unless the seed is put in the soil when it should be sown in the Fall, otherwise Spring is better. It is sometimes sown with Winter Wheat. In places where it is inadvisable to plow once a year, it is well planted in a crop followed by a cereal and the deposit seed to secure a stand for improving range conditions. It is recommended to sow with clover. The latter is to be used for future use. Northrup, King & Co.'s "Sterling" Brand, by express or freight, lb., 20c; 10 lbs., $1.70; 50 lbs., $7.75. $15.00. Bags free.

CANADIAN BLUE GRASS. (Poa Compressa.)

Resembles somewhat the Kentucky Blue Grass, but is shorter and more slender. It is grown very extensively in Canada and some parts of the United States. It will thrive even on hard clay soils, where there is not quite enough lime and fertility for Kentucky Blue Grass. It holds its color and freshness winters commence even when planted with Clover. Red Top and Orchard Grass are the best for mixing with it to grow on inferior soils. On good land it becomes tall enough for hay and as it shrinks very little in drying, the hay is heavy for its bulk. Grows from one to two feet high. Sow 30 lbs. of seed to the acre. Price, bu. of 14 lbs., $1.65; 100 lbs., $11.90.

KENTUCKY BLUE GRASS. (Poa Pratensis.)

This makes the best, sweetest and most nutritious pasture for all stock. It is the first to start up in the Spring and remains green until snow when grown in the Southerly exposure. It is very hardy and not injured by cold or dry weather, but is not so hardy when frosty. The roots are so thick and stout that they form a tough sod. Blue Grass requires about two years to get well started and for that reason it is often sown in mixture with other grasses. It will do well on almost any kind. Sometimes called "June Grass."

Kentucky Blue Grass is well adapted to open woods. As a pasture it is better liked than any other grass except Bromus or Meadow Fescue. It may continue to improve for ten to fifteen years as the plants spread with their underground rhizomes and roots. It is best sown with a mixture of Clover, Timothy, Meadow Fescue and Bromus. The mixture should be equalized by the Blue Grass. It is not advisable to turn animals on to a Blue Grass pasture before the grass is strong. During the winter when it is very green, it should not be cut. Sow 20 to 25 pounds of "Sterling Brand" seed to the acre when sown alone.

We wish to call particular attention to the cleanliness of our Sterling Brand Blue Grass. As usually sold by most seedsmen, Blue Grass weighs 10 to 15 lbs. to the bushel. Our Sterling Brand seed is so thoroughly cleaned that a measured bushel weighs 28 to 30 lbs. We sell Kentucky Blue Grass at the lawful weight of 14 lbs. to the bushel.

Northrop, King & Co.'s "Sterling" Brand, lb., 25c; bu. of 14 lbs., $2.50; 100 lbs., $16.00.

Northland Brand, lb., 20c; bu. of 14 lbs., $1.55; 100 lbs., $11.90.

Viking Brand, lb., 15c; bu. of 14 lbs., $1.55; 100 lbs., $11.90.

The prices on all grass and field seeds are subject to market changes. Our latest Red Figure Price List will be sent on any request.

RED TOP (SOLID SEED.) (Agrostis Vulgaris.)

The place for Red Top is on rather moist soil, deficient in lime and fertility. It will grow where the soil is too poor for Timothy and Kentucky Blue Grass. It is a good variety to sow with Timothy and Clover for meadow or pasture and is more permanent than either of the other two. It should be sown close, as if it is allowed to grow up to the seed, the cattle dislik it. On good soil it grows about two feet high; on poor, gravelly land about half that height. It has been grown successfully even on alkaline land where other grasses failed. Red Top, commonly known as Herd's Grass, should be extensively grown, especially with other grasses. Red Top has interlocking, thick roots which make it firm and not likely to suffer injury from the hoofs of animals. It stands the effect of drought better than Timothy. It is more permanent if it is grazed off and not allowed to go to seed. For the best quality of hay, it should be cut when in full flower. It is more easily cured than almost any other grass.

As a hay crop, Red Top is next to Timothy in importance among grasses in this country. It grows two feet or more high and yields one to two tons per acre. It increases in thickness for several years after sowing and is one of the most permanent of cultivated grasses. Red Top weighs 14 pounds to the bushel. Only ten pounds of "Sterling Brand" required to the acre.

Northrop, King & Co.'s "Sterling Brand" lb., 40c; bu. of 14 lbs., $3.00; 100 lbs., $18.60, subject to market changes. See Red Figure Price List, for values of other brands of Red Top.

WESTERN RYE GRASS. (Agropyrum Tenerum.)

Sometimes called Slender Wheat Grass, the famous bunch grass of the Canadian Northwest.

It affords excellent pasturage and provides large quantities of hay, but if wanted for hay, should be cut early, as it is relished better by stock. It thrives on all soils, but is peculiarly adapted to prairie soils. It gives good returns, on land quite indurated and fits into any grass where it may be grown successfully.

The seed being quite heavy, may be sown with any ordinary grain seeder. When sown alone as is the common practice, the seed should be put in 1 to 1 1/2 inches deep, according to soil and season. 5 pounds to the acre is recommended with Bromus Inermis, 1 lb., freight, by express or freight, lb., 20c; 10 lbs., $1.25; 100 lbs., $10.00. Bags free.
**MILLET**

The varieties of Millet are among the oldest of cultivated grains. A large part of the world’s inhabitants subsist upon the different Millets, especially in Africa, Turkey, Persia, India, and Japan. However in our country we are chiefly interested in the use of Millet as a stock food.

Millets are especially adapted to regions of light rainfall and hot weather. They are used principally for forage, being very valuable where Timothy is an uncertain crop. The hay is fed most satisfactorily to dairy cows and sheep. In feeding value it ranks well above Timothy.

**Culture.** Millet does best on rich soils, full of humus, or vegetable matter, where the seed bed is fine and well prepared. It is not suitable for stiff clay or coldy soils, which would cost too much to prepare for this crop. When sown in hot weather Millet is especially good to subdue weeds.

It is also used as a catch-crop after early grain or a crop which fails. In a dry district the ground is better if it is double-disked without plowing, after which it should be harrowed and the Millet drilled in; or if the soil has been plowed for a long period, it may be plowed after the double-disking. Summer fallow or land plowed late the previous Fall, is of course, likely to be in excellent condition for Millet and will only require to be lightly disked and harrowed before drilling.

Millets are sown about the same time that Corn is planted but may be sown somewhat later if they are to be grown for hay or forage. They should never be sown until continued warm weather is certain. None of the small seed varieties should be sown deeper than three-quarters of an inch if the ground is moist. The seed may be sown broadcast, or preferably with a narrow tine drill. Sow about 25 lbs. of seed per acre for hay and slightly less than that for seed. Moist clay soil requires more seed than light sandy soils. Since the seed does not germinate so readily as corn, it is produced from Millet sown thinly in drills and cultivated between the rows. Millet should never be sown until the earth is warm in the Spring and when continued warm weather is assured.

Millet is one of the best crops for immediate planting on new land on first breaking. Unless the sod is very stiff the crop can be sown soon after the former is turned over.

Cutting for green food may begin as soon as any large number of heads appear and may continue until the crop is ready to make into hay. The best hay is obtained by cutting just as the Millet starts to head nicely, say when one-quarter to one-half the heads are out. If German Millet or other Millets grown for hay are cut too early they lack "body," that is, weight and full feeding value. If cut too late, the stems become woody, the seeds shatter and the hay is sometimes dangerous to feed. If the seeds are ripe it may cause kidney trouble in feeding any animal a sheep. A tedder can be very profitably used in currying the hay. It should be well dried before putting into hay. If allowed to stand in the field cock for sometime, it should be opened up to the sun before hauling into the barn. When Millet is grown for seed, it may be harvested and handled like any grain.

In all cases of harvesting for the seed, Millet is best hand cut and bound with a binder. The bundles should be placed two by two in narrow shocks. Even when intended for hay, many of the Millets can be cut with the binder and raked to the land.

**INFORMATION ABOUT FOUR LEADING VARIETIES**

See Opposite Page for Additional Descriptions.

**German Millet.**

The stems are single or few in number from each root, they grow large and stout, unbranched. The leaves are rather short, broad and stiff, the heads are often long, slender, 6 to 8 inches long. The seeds are small, of a golden or yellow color. The illustration at the top of this page shows the German Millet. It will give a very heavy tonnage of first class feed. With thin seeding the stems become coarse and reed-like, therefore we recommend using a liberal quantity of seed.

**Hungarian Millet.**

This is commonly known as "Hungarian Grass." Each root sends up several slender stems which often branch. The leaves grow upright, rather narrow. Heads are borne erect or nearly so, about four inches long, dark purple in color, slightly and very compact. The seeds are brownish black mixed with yellow. This variety withstands droughts remarkably well. If growth is checked by dry weather the least rain will restore its vigor. It is more successful in dry, sandy soils than does best in good soils, well manured. It affords a very fine quality of hay on account of its slender, leafy growth.

**Japanese Millet.**

This has been incorrectly called "Billion Dollar Grass." It is highly recommended for feeding dairy cattle, young stock and sheep. "At the Massachusetts Station Prof. Bunker grew crops in which the plants reached a height of six feet, yielding from twelve to eighteen tons of green forage per acre. Millet from such crops was much preferred by dairy cows, proving superior to flint corn fodder," says Prof. Henry of the Wisconsin Experiment Station in his book, "Feeds and Feeding." Weeds and Feeding.

Japanese Millet stools freely and yields enormous crops. Its leafage is heavy and heads very compact. This variety does best on moist, rich lowlands as it does not endure drought well. Our Illustration shows the type of the Japanese Millet head, with its many small branches. Its color is bright gray with a polished appearance when removed from the hulls, which are dark brown and rough.

**Siberian Millet.**

Siberian Millet is considered one of the best varieties for the Great Northwest. It is often grown in sections where the season is too short to mature a Corn crop, and in other places has proven a very valuable cover crop. Prof. Henry of the Massachusetts Station says: "With Siberian Millet we have a variety being so close together that the plants bear a great quantity of leaf blades. It also yields a heavy crop of seed under favorable conditions. This variety is extremely drought-resistant. As shown in our illustration, the heads of Siberian Millet are resembling some of the cereal grasses. We showed the characteristic type of the family. It is going to the great stooing habit of this variety that it is such a heavy yielder. The seed is a reddish yellow color. We have chosen, dependable seed to offer this season. Write for samples. For prices on all varieties see our Red Figure Price List."
MILLET

For Prices on all Millets see our Red Figure Price List which is enclosed in this book. These lists are issued frequently throughout the season as changes in price make it necessary. Sent free upon request.

**German Millet.** (True Southern Grown Seed.) It is the North. Millet is sown almost altogether for hay, and for that purpose Southern grown seed is much the best. It grows taller than does that from Northern seed, and that means more hay. It is finer than that from Southern seed, and that means better hay. In fact, it is so fine and so well grown, and is such a good judgment, based on an experience of many years, that a farmer had better, from the standpoint of profit alone, pay $2.50 a bushel for true Southern grown German Millet than to sow the best Northern Millet as a gift. Millet seed produced in the North, even from Southern seed, becomes what we call Common Millet. Not only does it grow shorter, but it does not grow in character becoming coarser and much more dwarf, but the seed itself shows a change, and is readily distinguished by those experienced in handling it. We wish to say that any Millet seed offered and shipped by us as German Millet is true Southern Grown Seed, and that only.

German Millet is very sweet, palatable, and when fed to dairy cows produces a large amount of milk. On good rich soil it grows four to five feet high. It is very tender if cut at the right stage, which is when it is in full bloom. About three-fourths of a bushel of seed is sown to the acre; 50 lbs. per bu. A good yield is from three to five tons of hay to the acre. For prices on all grades, see our Red Figure Price List.

**Common or Northern Millet.** As stated before, Common Millet does not yield so much hay nor so good hay as the German (Southern Seed). It is usually much cheaper than true German. Grows usually from two and one-half to four feet high and makes excellent hay. Sow about three-fourths of a bushel to the acre. We have in store this season an especially fine lot of common Millet which is as nearly perfect in quality as Common Millet can be. This we are offering under our Sterling Brand, (sold only in sealed bags). All grades of Common Millet will be priced on our Red Figure Price List which is issued frequently during the season as changes in prices make it necessary. Sent free upon request.

**Hungarian Millet.** (DARK SEED.) Often called Hungarian Grass. Many regard this as being better than German Millet as it is drier in summer and requires less moisture. The hay is fine and of excellent feeding value. It is especially valuable on account of requiring such a short season to make a fine crop of most excellent hay. For this reason it is more a catch crop. It can be sown as late as the middle of July with good results, in ordinary seasons. It is much used for following such crops as early potatoes and barley for a crop of hay, thus giving two crops on the same land in one year. Also grown as a green manuring crop to turn under, adding humus or fertility for future crops. Hungarian Millet does not grow so coarse as some other varieties, but still yields quite heavily, from two to four tons of hay to the acre being an ordinary crop. Hay is quite leafy, of very fine quality. For prices see our Red Figure Price List enclosed or a new one will be mailed promptly upon request.

**Siberian Millet.** A fine variety from Russia, earlier than either German Millet or Hungarian, and consequently very valuable for the North and yields remarkably good results. It is an extreme drought lover and is about two weeks earlier than the German Millet. The leaves are very tender, making it excellent for hay. The South Dakota Experiment Station pronounces it "the most promising variety yet tested." The plant stows to a remarkable degree, as many as thirty to forty stalks have been grown from one seed, and is not subject to rust. For prices see our Red Figure Price List enclosed, or a new one will be mailed promptly upon request.

**Kursk Millet.** United States from Kursk, Russia, in 1893, after which extensive experiments were conducted at both South Dakota Stations, demonstrating the superiority of this new variety. Results since then have been more than gratifying. It ranks very high both as a hay and seed producer, and in dry years the weight and quality of hay have been far superior to other sorts. In favorable seasons, so much difference is not apparent, but it has always been in favor of Kursk Millet. While on moist lands, the German or other southern varieties are recommended, for dry seasons we urge the planting of Kursk Millet, knowing that it will produce the results claimed for it. For prices see our Red Figure Price List enclosed, or a new one will be mailed promptly upon request.

**Japanese Millet.** Improperly called "Billion Dollar Grass." Entirely new. It grows from 6 to 9 feet high, stands up remarkably and yields enormous crops. When cured it makes good hay and in quality is superior to corn fodder. It is released by all kinds of stock. It may be sown broadcast at the rate of 15 lbs. an acre, but it is better to sow in drills 12 to 18 inches apart, using 10 to 12 lbs. to the acre. Cultivate until the plant is 15 inches high, when its rapid growth will smother all weeds. It does best on low, moist ground. For prices see our Red Figure Price List enclosed, or a new one will be mailed promptly upon request.

**Hog or Broom Corn Millet.** This is grown for the same purpose for which other Millets are sown, and makes fair hay if cut very young. It, however, yields enormously of seed, even 60 to 70 bushels to the acre, and this seed is very advantageously used for fattening swine and other stock, and is of special value for this purpose in sections where corn cannot be safely or cheaply grown. Seed also makes very fine feed for poultry and young chicks. It is very similar to the Early Fortune Millet, except that the seed is yellowish-white in color. It will mature in about two months from sowing the seed. For prices see our Red Figure Price List enclosed, or a new one will be mailed promptly upon request.

**Early Fortune Millet.** A most promising variety, of which astonishing yields are reported. It is very early, and is claimed to be rust proof, and that hatch broods will not eat the plant. The seed is very beautiful and distinguished in appearance and is of is of beautiful red color. The seed is two or three times the size of German Millet. This variety heads in from 25 to 35 days. It gives a large yield both of seed and fodder. It can be fed to hogs and other stock without injury, even when cut so late that the seeds has formed. The seeds are smooth, the heads are branching, and in other respects this variety is similar to Hog Millet except for the color of the seed. For prices see our Red Figure Price List enclosed, or a new one will be mailed promptly upon request.

See opposite page for further information on Millets.

**New Grasses and other Grases.** By Prof. Thomas Shaw. How to cultivate, harvest and use them. Price, $1.00 (postpaid), $1.50.

**Grasses and How to Grow Them.** By Prof. Thomas Shaw. Complete in all particulars. Price, $1.50 (postpaid), $1.50.

**Soilng Crops and the Soil.** By Prof. Thomas Shaw. Illustrated. 364 pages. Price, $1.50 (postpaid), $1.50.
PERMANENT MEADOW AND PASTURE MIXTURES

We ask purchasers to observe that we are able to offer the following mixtures, in round bag quantities, only after the fact that we must wait until the quantities before the commencement of the season, therefore nothing can be taken out of stock. In all these mixtures we are introducing small quantities of Alfalfa seed with the idea of inoculating the land with the Alfalfa bacillus. Alfalfa revolutionizes farming but the bacillus must be established before the revolution can occur. We cannot afford to add anything to these mixtures on account of the slight margin upon which we have figured. We shall be glad to write estimates to any special mixtures desired by our patrons. Our recommendation for quantity to the acre is fixed on the basis of good, fair seeding. The quantity can, of course, be spread over more or less ground as the case may demand. 25 lbs, supplied at the 100 lb. rate.

These are mixtures we can "stand by." We can make up lower priced mixtures if desired but the cost of the seed is so small, compared with the value of a good meadow, that it would not usually pay to plant anything but the best mixture obtainable.

Mixtures for Permanent Meadows.

No. 1. For dry and high land. Contains Red Top, Medium Red, Mammoth Red, and Alsike Clover, Alfalfa, Timothy, Orchard Grass, Perennial Rye Grass, Tall Meadow Oat Grass, Meadow Fescue, Hard Fescue, Canada Blue Grass, Kentucky Blue Grass and Slender Wheat Grass. Sow 20 to 30 lbs. to the acre. Per 100 lbs., $16.00. Bags included.

No. 3. For moist and wet land. Contains Red Top, Timothy, Alsike and Medium Red Clover and Tall Fescue. Sow 20 to 25 lbs. to the acre. Per 100 lbs., $14.50. Bags included.

Mixtures for Permanent Pastures.

No. 4. For good high and dry land. Contains Tall Meadow Oat Grass, Orchard Grass, Hard Fescue, Sheep's Fescue, Timothy, Perennial Rye Grass, Medium Red, Mammoth Red and White Clover, Kentucky Blue Grass, Canadian Blue Grass, Meadow Fescue and Alfalfa. Sow 25 to 35 lbs. per acre. Per 100 lbs., $20.50. Bags included.

No. 5. For good land neither too wet nor too dry. Contains Tall Meadow Oat Grass, Orchard Grass, Sheep's Fescue, Timothy, Perennial Rye Grass, Red, Alsike and White Clover, Alfalfa, Kentucky Blue Grass and Red Top. Sow 25 to 35 lbs. per acre. Per 100 lbs., $17.25. Bags included.

No. 6. Especially for prairie conditions. Contains Slender Wheat Grass, Canada Blue Grass, Kentucky Blue Grass, Red, White and Alsike Clover, Alfalfa and Bromus Inermis. 30 to 40 lbs. per acre. Per 100 lbs., $18.75. Bags included.

Descriptions of each variety of grass mentioned above will be found on pages 181, 182 and 183.

Awarded a $150.00 Prize.

I believe I owe to Northrup, King & Co. the awarding of the $150.00 price in this district, given by Mr. James J. Hill for the best managed farm in the Dakota and Minnesota. The deciding point in Prof. Shuck's mind, the judge who passed upon the merits of each farm, was the fine pasture on this farm. There were a number of farms entered in the competition with finer buildings and better stocked and fenced, but in the six years which I have been here I had used nothing but Northrup, King & Co.'s seed, and had just put up a pasture which I thought the judge could not overlook. In the Fall each of the eight kinds of seed showed a luxuriant growth and were easily identified in the stubble. As I expected my seeds to return to me a thousand fold I thought it folly to stop at first cost in obtaining the best.

G. F. MOORE, Inwood Stock Farm, Minn.
INSECTICIDES AND REMEDIES FOR FUNGUS

None of the poisonous preparations listed below can be sent by parcel post. For postage on other items, add at the rates on page one.

Insecticides for Leaf Eating Insects.

Paris Green.
For all leaf eating insects. The standard, arsenical poison, for all house, shrub, and garden pests, cheaper than arsenate of lead but does not stick to the foliage so long. There is also danger of arsenic poisoning dogs, horses, and other animals. One pound for potatoes applies at the rate of 1 lb. to 50 gallons of water in each 1/20 lb. to 100 sq. ft. of garden. For potatoes apply at the rate of 1/8 lb. to 100 sq. ft. of garden. For trees and shrubs, 1/2 lb. to 100 sq. ft. of foliage. Paris Green is also commonly used for spraying crops and other vegetables or any other available powder for this purpose.

To kill cutworms, sprinkle Paris Green on small trees and shrubs and around tomatoes, and all garden plants. Mix 1/2 lb. with 20 lbs. of salt and apply in bags with 20 lbs. of salt and apply in bags with 20 lbs. of water. Place this poisoned grass or hay near feeding places of the caterpillars. In using Paris Green it is essential that you use a brush and never a spoon or paste, and that you wash your hands after handling it, as it is very poisonous. This is the most reliable insecticide for control of insects that parasitize flowers and fruit trees. Each pound contains 100 lbs.

Packing applied to pounds 10 required. It requires 1 oz. of Paris Green to control 10 bugs. It should be applied just before the bugs appear. Paris Green is a non-poisonous powder and very popular in all gardens. It is used for killing squash bugs, cutworms, cabbage worms, and other insects. It is also used for the control of fungi and other diseases. It is also used for the control of fungi and other diseases in the control of fungi and other diseases. It is also used for the control of fungi and other diseases in the control of fungi and other diseases in the control of fungi and other diseases.

Arsenate of Lead.
A good liquid arsenic for all leaf eating insects. Especially adapted for use on tender foliage. The arsenate of lead remains on the leaf of insects, and it is not necessary to wash it off. One pound will protect about 75 plants. It is also used for the control of insects that parasitize flowers and fruit trees. Each pound contains 100 lbs.

Cutworm Food.
Drop a teaspoonful of this around each plant the day it is planted. It makes the soilings break through. The worm then eats the poison and not the plant. One pound will protect about 75 plants. Cutworms work at night, usually cutting off the plant stem at the surface of the ground. They are dark colored, rounded caterpillars, which hide in the soil in the daytime. Price, lb., 2c; 8 oz., 1c.

Fir Tree Oil Soap.
A popular insecticide for use on trees and shrubs. It is also used for the control of insects that parasitize flowers and fruit trees. Each pound contains 100 lbs.

Fish Oil Soap.
A soap made from fish oil, and is free from animal fats or other adulteration. Makes an excellent spray for trees and plants. It is also used for the control of insects that parasitize flowers and fruit trees. Each pound contains 100 lbs.

Formaldehyde.
Smut and other fungous diseases of wheat, barley, oats and other grains amounts to millions of dollars every year. The spore of the fungus is on the seed grain which you plant; when the grain sprouts and grows the fungus grows too; it follows up through the stalk of the grain, and kills the plant. This is the same fungus that causes the smut grain and a diseased yield of inferior quality. The same holds true of scab which has proved a bane to all the potato growers. Can you afford to use it? The price of a bushel of wheat expended for Formaldehyde will add several bushels to the harvest. It takes much less time than any other process of destroying this fungus, and reduces the spread of the disease. Price, lb., 2c; 8 oz., 1c.

Grafting Wax.
It is important that the wax should not soften and flow off the graft union. To prevent this, a wax is used that will stick to the union and prevent the flow of water over it. This wax is made with this particular feature in view. It will not soften in the sun so that it will remain on and prevent root until the wound is covered with new bark. If this is not done the union will not take. It is also found in our booklet, "Insects and Diseases," which is sent free on request.

Grape Dust.
A powdered fungicide very effective in destroying mildews and preventing blight. Price, 1 lb., 15c; 1 lb., 2c; 1 lb., 1c.

Hellebore.
Pure Powdered White Hellebore is one of the best insecticides for general use on plants and vegetable foliage. Destroys insects that eat the leaves and flowers, such as Slugs, Caterpillars, Currant Worms, Cutworms, and if mixed with bran, Rose Bugs, and, in fact, all the existing insects that pester the gardener and grower of plants. When used with water, 1 oz. to 2 gal. is the usual proportion. If used dry apply by dusting. Price, 3c lb., 15c lb., 20c; 1 lb., 1c.

“Black Leaf 40” Nicotine Sulphate.
This is a splendid contact spray to kill green and wooly Aphids; Plant Lice, Red Spiders, Cabbage Aphids and Onion Thrips. It is especially effective for the green Aphids, Plant Lice, and Red Spiders. If used for late fruit, it is of no use, as it is not strong enough. If used early in the season, it is of great value. For potatoes apply at the rate of 10 lbs. to 100 sq. ft. of garden. For tomatoes and other plants, 1 lb. to 100 sq. ft. of garden. For Sweet Peas and Roses, use 40 drops of liquid to 1 gallon of water. For beans, use 40 drops of liquid to 1 gallon of water. This “Black Leaf 40” is a concentrated solution of Nicotine Sulphate and contains 40 % of Nicotine by weight. The difference between “free” nicotine and “condensed” nicotine is that the “free” nicotine is cheaper but contains less nicotine per pound by weight, and also rates more easily. Hence, the sulphate is to be preferred for purposes of liquid application. It makes a good “castor oil” for sprays and trees, and not for fumigating. Price, 1 oz. bottle 25c; makes 3 to 6 gal. of spray; this cannot be sent by parcel post.

Blight, Mildew and Rust Preventive.
Bordeaux Mixture.
Presents Blight, Rot, Mildew, Specks and cent. Ready for use. One gallon makes 50 gallons Spraying Compound. A reliable and effective means of destroying vegetables and fruit trees. Can be used for this purpose. It makes a good “castor oil” for sprays and trees, and not for fumigating. Price, 1 oz. bottle 25c; makes 3 to 6 gal. of spray; this cannot be sent by parcel post.

Nico-Fume Liquid.
This is a refined solution of “free” nicotine, containing 40 per cent nicotine. This may be used both for spraying and fumigation. It is a very effective remedied against Aphids, and other insects which feast upon Roses, Sweet Peas and other plants. When used at the rate of 1 to 2 teaspoonsful to the gallon of water. For roses, use 2 to 3 teaspoonsful to the gallon. Price, 1 lb. 5c; 2 lbs. 10c; 5 lbs. 25c; 10 lbs. 50c.

Kerosene Emulsion.
A safe and sure remedy for all LIce and insects that infest plants and trees at times. It will destroy the Mealy Bug, Squash Bug, Oyster Shell Scale and all insects that take their nourishment through a prosula. It is put up in a concentrated form, and dilutes with water from 10 to 30 times its bulk, according to the amount of insects on the plant. It is also used on the San Jose Scale a great deal when it is in the early stages. Apply with a vaporizer or with a cup full of water to which a few drops of oil have been added. This will kill the insect immediately. Price, quart 40c; gallon $1.00; by express or freight only at purchaser’s expense.

Lemon Oil Co.’s Insecticide.
Destroys mealy bug, scale, and other insect pests. It is used on the best known insecticides, cheap, safe and effective. It can be applied in whatever form seems most convenient, and is very successful. It can be applied in whatever form seems most convenient, and is very successful. It can be applied in whatever form seems most convenient, and is very successful.

Lime-Sulphur Solution.
It is one of the best and safest insecticides and fungicides. It is also an excellent fungicide for house plants, palms, etc. Dilute with water 30 to 50 parts. Price, quart 40c; gallon $1.00; by express or freight only at purchaser’s expense.

Lime Sulphate.
It is one of the best and safest insecticides and fungicides. It is also an excellent fungicide for house plants, palms, etc. Dilute with water 30 to 50 parts. Price, quart 40c; gallon $1.00; by express or freight only at purchaser’s expense.

Sulpho-Tobacco Soap.
A wonderful insect pest exterminator. It is used on all insects like on plants and flowers in and out of doors. Excellent for eradicating pests, such as Spiders, Red Spiders, and other insects. It is also used on the control of insects that parasitize flowers and fruit trees. Price, 1 oz. 1c; 1 lb. $1.00; 10 lbs. $10.00.

Thrip Juice No. 2.
Spiders, Mealy Bugs, soft scale and sucking insects generally. It is a contact insecticide concentrated. Price, 1 oz. bottle 10c; 1 lb. $1.00.

Tobacco Dust.
For eradicating pests in greenhouses and conservatories. Price, 1 oz. bottle 10c; 1 lb. $1.00.

Tobacco Extract.
Liquid, free from gum. Destroys plant lice and other insects of all kinds, red spiders, sheep ticks, etc. For spraying purposes. Price, 1 oz. bottle 10c.

Tobacco Stems.
For fumigating greenhouses and conservatories. Price, 1 oz. bottle 10c.

Sprayers.
See page 135 for complete line of sprayers for garden and farm use.
Timely spraying will save your fruits, vegetables and flowers.

**Spraying Suggestions.**

For sucking insects that live on plant juices—such as scales, lice and aphids, use Flat Tree Oil Soap, Fish Oil Soap, Kerosene Emulsion, Lemon Oil Co's Insecticide, Lime-Sulphur Solution, Nicotine Liquid, Sulpho-Tobacco Soap or Tobacco Extract. See page 157 for particular information on each. To kill chewing insects that eat the leaves or fruit—for example, currant worms, canker worms, apple worms (coddling moth) and cabbage worms, apply Arsenate of Lead, Bug Death, Heliothene, Paris Green or Slug Shot. For Cutworms use Cutworm Food or Paris Green. For blight and diseases use Bordeaux Mixture, Formaldehyde, Grape Dust or Lime-Sulphur. See page 157.

**Auto-Spray No. 1.**

A compressed air sprayer warranted against mechanical defect and guaranteed satisfactory. We have offered this sprayer for many years and with increasing success. Compressed air sprayers (or excel the old style bucket or knapsack devices and combine every point of excellence in a spray plant. The sprayer is first loaded two-thirds full of solution and air is then compressed in the remaining third. The compression of the air forces out the solution in the form of a fine mist or spray. It is perfectly simple and thoroughly durable. A few a序s of the pump will operate the machine for several minutes.

Uses—It is used for spraying trees and plants, green houses, poultry houses, washing windows or wagons, as a fire extinguisher, for spraying clothes to keep them fresh and clean, for spraying lawns to eradicate dandelions in fact, its uses are almost unrestricted. Three lengths of extension are recommended for tree work. The Auto-Spray No. 1 is used by nearly all the state experimental stations in the United States Government, and it is used and recommended by thousands upon thousands of agriculturists and horticulturists throughout the world.

**D R Y S P R A Y E R S.**

**Leggett's Champion Duster.**

Distributes Paris Green, Heliothene, Sulphur, Etc. Dispenses with all other labor of using water. For Farm, Garden, Vineyard, Tobacco Fields, Etc.

This implement has proved itself "Champion" among all other machines in its capacity to distribute a uniform and adequate spray in the smallest quantity of Paris Green, or other powder, doing effective work without injuring the foliage when used properly. The dry method is rapidly superseding liquid sprays.

Will green two rows of potatoes at once as fast as a man walks.

Machine weighs about six pounds. Without tubes it is 27 inches long. Each machine includes four sixteen inch tubes, six nozzles and two straps. Weight, 1.25 lbs. The reservoir holds over a quart of powder, equal to about 4 lbs. of Paris Green.

Price, $1.25; by express or freight at purchaser's expense.

**Champion No. 2.**

This duster is the same in its operation and arrangement as the regular Champion, but is a little larger and more powerful. It is particularly used and recommended for the distribution of powdery arsenate of lead, having a 6-inch fan box, which increases the air blast. The extra detachable reservoir increases its holding capacity. Weight about 8 pounds. Cased, with all attachments complete, 23 pounds. Price, $1.50.

**Little Giant Duster.**

Distributes any dry powder, Paris Green, etc., to perfection. This method has long ago passed the experimental stage, and highest authorities sanction it. Dust potato vines as fast as you walk, two rows at a time. Reservoir nearly a quart of powder. Machine weighs 8 lbs. One packed in gauze and strung for shipping weighs 15 lbs. Price, $6.00; by express or freight at purchaser's expense.

**Excellor Single Tube Sprayer.**

Sprays in any direction. An invaluable feature and one that is sure to be appreciated by every user of the sprayer pump. It is made extra strong, having reinforced 15-guage casing down without contents of can spilling.

The air chamber measures 16 inches in length by 1½ in. in diameter. The reservoir holds about a quart. It has a single brass tube extending into the reservoir and then straightening out to the outlet. The stream then goes forward, although it will spray in any direction desired. Especially adapted for use in the poultry house, in the garden and orchard and on the farm. Price, 50c. Mailing weight 1 lb.

**Smith's "Junior" Continuous Sprayer.**

This sprayer will do more work with less labor than any other in its class. It is made of tin, galvanized iron or brass and holds one quart. It is furnished with two interchangeable brass nozzles for spraying straight ahead or at any angle. The compressed air chamber being in front of the barrel allows the reservoir to be filled full, thus giving it an extra-large carrying capacity. All parts are removed for cleaning, with fitting hose of brass. This sprayer is suitable for vegetables, disinfectants and general farm sprays. For piece of 1 quart size:

- All Tin, 50c.
- Galvanized Iron, $1.00.
- Brass, $1.25.
- Express or freight at purchaser's expense.

**Acme Corn Planter.**

Works in any soil; has a flexible and adjustable iron and steel. And does not wear the brush. It has an iron seed box and steel channel. The foot is made of polished steel, well made, strong, durable, reliable and gives universal satisfaction. Price, $1.00.

**Triumph Hand Corn Planter.**

A pioneer implement in this line and one that has always been popular. It is light and easily handled, yet strongly made, and with reasonable care, should last a long time. It works on any soil and never clogs. The operator can see the corn deposited in the ground. Price, $1.00. When desired we furnish the Triumph Planter, with an extra compartment in lower end of hopper, and an additional seed slide for planting pumpkin seed at the same time, with extra. Price, $2.15.

**Eureka Potato Planter.**

A light tube planter. Its sprung-closed jaws are especially designed to enter the ground easily, yet open wide enough to drop the largest seed. The dropping lever is adjustable for any depth of planting. The conveyor tube is galvanized iron. Price, each, $1.00.
"Clipper" Grain and Seed Cleaner
Unexcelled for Farm Use.

For a quarter of a century we have used "Clipper" Grain and Seed Cleaners in our warehouse and farm and consider an important part in maintaining and enhancing the reputation of Northrup, King & Co. for selling clean, plump seeds of high quality.

We have tested every Fanning Mill on the market and find the "Clipper" excels them all. These cleaners are first class in every respect. They are equipped with the best outfit of screens ever sent out with a farm mill. You can make any separation on the mill, based on difference in sizes of seeds or grains, that can be made with screens, and the vertical air blast will make separations based on difference in weight that would be impossible with most other machines.

How the "Clipper" Eradicates Weeds.

One reason your fields choke up with weeds is because you sow them with your seed.
The way to get rid of the weeds is to clean your seed with the "Clipper" before sowing.

It takes out all weed seeds, light, dead seed or grain, and insures an ever-cleaning of rows, healthy plants, increasing the yield an acre, and the grade as well. That means more profit and a larger bank account at the end of each season.

The screens are so arranged as to be in plain view and of easy access to the operator while the machine is in operation.

The vertical air blast is a feature that no other cleaner has and it makes possible some very difficult separations that can be made in no other way. For instance, when cleaning seed grains, if the blast is properly regulated and the mill turned just fast enough, all the light shrunken kernels can be blown out or separated, leaving only the largest, heaviest, plump grain seed to go into the hopper. The most imperfect kind of seed and that passes into the grain box.

The grain box has a lifting board at the end, which allows the contents to be easily scooped into sacks. This blast box is highly important, as it prevents waste, makes sweeping floors unnecessary, and is just the place to store the screens and all detached parts when not in use. The steel shell and the hopper of the "Clipper" have a lifting board, which enables you to change the speed of the fan to suit the varying weights of grains and seed.

The two major designs of obtaining a first-class, inexpensive and durable mill, for general use, we recommend the "Clipper."

Endorsed and used by State and Government Experiment Stations.

Important Announcement.

We have arranged withIllustration of "Clipper" Grain and Seed Cleaner. in the states of Minnesota, North Dakota, South Dakota, Iowa, Montana and Northern Michigan.

Our customers are to sell the No. 1 B. "Clipper" for $2.50 each for Minneapolis. Shipping weight, 185 lbs. Full directions for operating sent with every machine.

The No. 2 B. "Clipper" is a hand power cleaner and differs from the 1 B only in size and capacity. It is designed especially for cleaning small crops of seed, such as clover, timothy, alfalfa, and any other non-solder joint grass seed. This size will clean a bushel in 15 minutes. We do not recommend it as a grain cleaner if it is to be operated by hand; the operator's power is required than on grass seeds. We can furnish a driving pulley, however, for 50c postpaid. Twelve seed screens are furnished with this mill. Our price, No. 2 B, $32.50 each for Minneapolis.

Little Wonder Seed Sower.

A low priced sower that is well built.

The bottom board is an inch thick. The sews work does good work and gives satisfaction. Price, $1.00, shipped at customer's expense. Mailing weight 5 pounds.

"Clipper" Bean and Pea Picking and Sorting Table.

The work of separating poor from good seed can be done very accurately with greater speed and less expense than by any other method.

From the illustration its case of good seed is readily apparent. The can be belt over such as Peas or Beans now is operated by a foot treadle and may be run at a speed to suit the operator.

This also works an agitator which feeds the Pea or Beans on the belt in the proper order. As the seed passes towards the operator, who remains seated during the work, the disconnected broken or otherwise unsuitably cleaned may be quickly pushed or easily removed and placed in the receptacle on the side of the belt. The good Pea or Beans drop into a spout and run into a sack which may be placed at the bottom of the machine. The hopper is large and filled approximately a bushel of seed.

We consider this picking table the most satisfactory on the market. There are thousands in use throughout the country, not only by the small grower or farmer, but by the large farm seed growers. Its cost will be saved by handpicking a very few bushels of Peas or Beans, the rest of the crop is not worth the labor of forer or wear out, except the can- vass belt which may be replaced at a trifling expense. Our price with large hopper is $8.00, f. o. b. Minneapolis.

The "Clipper" Foot-Tread and Bean Picking and Sorting Table.

What the "Clipper" Will Do.
The "Clipper" will clean all classes of grain and seeds, such as wheat, corn, oats, barley, rye, beans, peas, buckwheat, flax, corn seed, millet, clover, alfalfa, timothy, mustard, flax, etc., and is suitable for farm or general use. Unlike other mills, the "Clipper" cleans all classes of seeds and grains in one operation. Effective separation of plantain from clover seed is accomplished, removing imperfect and foreign seed, as well as cleaning the perfect seed, and any other separation that from its nature is impossible. It is the largest and most made for general use.
The new improved No. 1 B "Clipper Mill" embodies many new features, including precision and addition to the screen assortment making it suitable for practically all kinds of work.
The perforated zinc screens are graduated in 6ths of an inch in both round and oblong holes. The woven wire screens are made of plated wire, with the meshes uniform and true to count. The zinc screens will not rust and our plated wire screens will last for years if properly cared for. An illustrated instruction booklet showing how to use all they have been free upon request.

Every "Clipper Mill" is guaranteed, both as to material and workmanship. They are built by competent, skilled workmen and nicely finished in three coats of paint and varnish.

Every farmer ought to own a "Clipper Mill!" It will pay for itself over and over again by the increase in crop yields and improvement in quality. If more information is desired we will mail "Clipper Leader," free, on request.

Exclusive Features.
The "Clipper" will handle seed wheat at the rate of 20 bushels an hour and clover seed at the rate of 10 bushels an hour. No other Fanning Mill on the market will dispose of grain and seed so rapidly and well.

When you buy a "Clipper" you get necessary attachments without extra charge, including two wire and ten perforated zinc screens, equipped with separating boards.

Sterling Broadcast Seed Sower.

This has the following special features.
A slant feed-board—keeps hopper properly filled.
Automatic feed adjustment—starts or stops flow instantly.
Oscillating feed Agitator—positive force feed can't be clogged.
Patent distribution wheel—no soldered joint, full regulation size, scatters seed evenly always.
Triple gears—All adjustable.
Large hopper—Unequaled capacity, yet easy to handle.
Well known for its accuracy in all broadcast seeding—fertilizer and all seed that can be sown broadcast.
Carried comfortably by a strap over shoulder—trot around neck—and is shaped to fit the body.

This seeder will sow any seed that is sewn broadcast, such as oats, wheat, rye, flax, millet, clover, timothy, grass seed, etc. It can be very readily adjusted to the seed being sown. The feed plate and agitating device are of heavy sheet steel and all adjustments of spring steel. The hopper of heavy duty is light inside, and a two-half bushel. This makes a consistent interlocking, double flange, non-solder joint distributors, which is itself worth the price of the sower. It will be found the strongest, newest and best seed sower made. By freight or express, $1.50, customer to pay transportation. Mailing weight, 6 lbs.

Cahoon Seeder.

Larger in size than the Sterling Seed Sower and will distribute the seed over a slightly larger area. One of these machines will last a life-time.
It will seed evenly, 4 to 6 acres an hour. It will scatter the following distances: wheat, barley, rye, 25 ft., clover and timothy, 15 to 20 ft. The bag and hopper hold about 25 quarts. Price each, $3.00. Mailing weight, 75 lbs.

Our Red Price Figure Lists are issued at frequent intervals during the season. We will gladly mail you a copy free, upon request.
PLANET JR. FARM AND GARDEN TOOLS

It will pay you to use Planet Jr. Tools. They do the work of three to six men—do it better, give bigger results, and last a lifetime. Over two million farmers and gardeners are using them. Join their ranks now and share their success. Fully illustrated Catalogue of Planet Jr. Garden Tools mailed free on request.

No. 3 Planet Jr. Hill and Drill Seeder.
Holds 3 quarts. Price. $10.00

We recommend customers to buy separate Seeders and Wheel Hoes where they have enough work to warrant it. No. 3 sow in hills 4, 6, 8, 10, 12 or 24 in. apart in a complete row. A favorite among onion growers and market gardeners.

No. 4 Planet Jr. Combined Hill and Drill Seeder.
Wheel Hoe, Cultivator and Plow. Price.
Price Complete, $10.50
As a Seeder Only, $8.50

Soon pays for itself in the family garden as well as the larger acreage. Sows all garden seeds (in drills) or in hills, plows, opens furrows and covers them, hoes and cultivates.

No. 25 Planet Jr. Combined Hill and Drill Seeder.
Double Wheel Hoe, Cultivator and Plow. Price. $13.00

A splendid combination for the family garden, onion grower, or large garden. Is a perfect seeder, and combined double and single wheel-hoe. Capacity—2 acres a day.

No. 31 Planet Jr. Seeder and Wheel Hoe. Holds one quart. Price $6.75 Complete, $8.75 As a Seeder only.

The ideal tool for a small garden, combining a seeder that will sow even a paper of garden seeds with a light running Single Wheel Hoe.

No. 28, Hill and Drill Seeder, Single Wheel Hoe and Cultivator. $14.50
No. 29, Hill and Drill Seeder, plain, (as a seeder only) 11.00
No. 30, Single Wheel Hoe, Cultivator, Plow and Rake. 7.50
No. 31, Hill and Drill Seeder and Single Wheel Hoe. 10.50
No. 34, Single Wheel Hoe. 6.75
No. 35, Hill and Drill Seeder and Single Wheel Hoe. 8.75
No. 36, Single Wheel Hoe. 7.00
No. 37, Hill and Drill Seeder and Single Wheel Hoe. 7.00
No. 38, Double Wheel Hoe. 7.50
No. 39, Single Wheel Hoe. 6.00
No. 40, Double Wheel Hoe, Cultivator and Plow. 6.75
No. 41, Combined Drill Seeder and Wheel Hoe. 9.00
No. 43, Double Wheel Hoe. 4.25
No. 46, Single Wheel Hoe. 8.00
No. 47, Single Wheel Disc Hoe, complete. 5.50
No. 13 1/2, Double Wheel Disc Hoe, plain. 8.50

No. 11 Planet Jr. Double Wheel Hoe, Cultivator, Plow and Rake. Price. $8.50

A single and double wheel-hoe in one, Straddles crops till 20 inches high, then works between. The plows open furrows and cover them. The cultivator tree work deep and shallow. The hoes are wonderful weed-killers. The rakes do fine cultivation and gather up trash. Unbreakable steel frame, 14 inch steel wheels.

No. 12 Planet Jr. Double Wheel Hoe. Price. $6.00

No. 13 is identical with No. 11, except that the 4 1/2 inch hoes and rakes are not included.

No. 16 Planet Jr. Single Wheel Hoe, Cultivator, Rake and Plow. Price. $5.50

The highest type of Single Wheel Hoe made. Light, but strong, and can be used by man, woman or boy. Will do all the cultivation in your garden in the easiest, quickest and best way.

Indestructible steel frame. 15 inch steel wheel.

No. 17 Planet Jr. Single Wheel Hoe. Price. $4.75

You can do more and better hoeing with it in one day than you can do in three days with a hand hoe. The No. 17 has a pair of 6-inch hoes, a plow and a set of cultivator teeth, an outfit sufficient for most garden work.

No. 8 Planet Jr. Horse Hoe and Cultivator. Price with Steel Wheel, $9.25

Strongly made, and capable of a great variety of work. Non-logging steel wheel. Depth-regulator and extra-long frame make it run steady. 5 inch turning shovel with bolt, 50c per pair.

No. 101 Planet Jr. Plain Cultivator, Price. $5.25

Pack ed weight, 35 lbs. Price less wheel, $4.50. Weight, 47 lbs.

The Planet Jr. No. 101 Plain Cultivator is light yet strong, and one of the best tools offered.

Planet Jr. 12-tooth Harrow, Cultivator and Pulverizer. Complete, $8.75 Without Pulverizer, $7.15

Is invaluable to market-gardeners, truckers, tobacco and small fruit growers. The twelve chisel-shaped teeth cut out all weeds, stir and loosen the soil without throwing dirt on plants, and the pulverizer leaves the ground in the finest condition.

Barker Weeder and Mulcher.

This is a practical, as well as up-to-date, hand cultivator, doing better work than many others; it has small pointed shoes or hoes. The Barker is made on the principle of a lawn mower, the long revolving blades working up the surface of the ground thoroughly, cutting the weeds and separating them from the soil, so that they are easily destroyed. More effective, as no weeds can be missed and a fine mulch is left over the surface of the ground, which prevents the evaporation of the moisture.

The Barker is made in three sizes, viz: 6-inch cut, 8 1/4 inch cut, and 11-inch cut. Each machine is fitted with leaf guards and tooth attachment. The 11-inch cut is the standard size for onion sets and ordinary market garden crops; the 6-inch cut is for lettuce and crops that are planted in close rows. The 11-inch for crops that are planted from 14 to 18 inches apart in rows.

No. 6 D Complete with all attachments, 6 inch $5.00
No. 14 D " " 8 1/4 " 6.20
No. 11 D " " 11 " 7.00

### Natural Raffia.

The best tying material for plants. Also used extensively in basket making in combination with Basketry Reed or Rattan.

### Colored Raffia.

Valuable for fancy work in making baskets, bags, etc., usually with Reed or Rattan. The following colors are kept in stock at all times: red, dark green, purple, blue, brown, crimine, black, pea green and orange. Price per lb., 60c; ½ lb. at the pound rate. Also put up in two ounce bundles at 10c each. When sent by mail, add for postage at parcel post rates.

### Basketry Reed or Rattan.

Nine sizes are carried in stock, besides the flat reed, the highest priced being the smallest in size. Put up in round bundles in various weights, ½ lb. to 1 lb. each. By mail, add for postage at parcel post rates. No. 0 Round Reed, per lb., $2.50. No. 1 Round Reed, per lb., $1.00. No. 2 Round Reed, per lb., $1.50. No. 3 Round Reed, per lb., $1.50. No. 4 Round Reed, per lb., $1.50. No. 5 Round Reed, per lb., $1.50. No. 6 Round Reed, per lb., $1.50. No. 7 Round Reed, per lb., $1.50. No. 8 Round Reed, per lb., $1.50. No. 9 Round Reed, per lb., $1.50. No. 10 Round Reed, per lb., $1.50. No. 11 Round Reed, per lb., $1.50. No. 12 Round Reed, per lb., $1.50.

### Indurated Fibre Saucers to use with Flower Pots.

Indurated Fibre is a wood pulp product, hardened by chemical process under great pressure. It is light, strong, waterproof, neutral in character and is easy to keep clean. It is an exceptionally good material for flower pot saucers. Light, not easily broken, easy to clean. Will not absorb through and mould and its surface will not scratch work, and carthware does. Color, dark mahogany.

### Indurated Fibre Rolling Stands for Heavy Plants in Tubs or Pots.

The device consists of two steel pieces securely riveted and equipped with casters, a strong and compact support for plants, and can be readily rolled about from place to place without injuring the plant. Takes tub diameter at bottom. Each.

### Tomato Support.

Very valuable for keeping tomato vines off the ground. Will largely increase the yield and improve the quality of the fruit. Every gardener should have them. Each, 15c; 3 for 25c; dozen, $1.25. F. O. B., Minneapolis.
Northrup, King & Co., Seedsmen, Minneapolis, Minn.

HIGH GRADE FERTILIZER AND LAWN DRESSING

Our prices include sacks and cartage to depot in Minneapolis. 500 lbs. of one kind at top rate, except where 500 lbs. or 1000 lb. price is quoted. We cannot break bags except as noted.

Northrup, King & Co.'s Sterling Garden and Lawn Fertilizer.

Analysis: Ammonia, 2 per cent; available Phosphoric Acid, 10 per cent; Potash, 1 per cent.

It is the result of years of experiment experience and experience. It is a complete fertilizer, containing in the right proportions, a concentration of the elements necessary for the growth and development of all plants. You can see growth. It produces a rich, green color, and makes a permanent evenness over the whole surface of your lawn. It is not unpleasant to handle, being odorless, and it is easily put on. Two or three applications in a season, at the rate of a pound to every hundred square feet, and it will keep the lawn both beautiful and healthy. It is applicably suitable for sandy soils and will remain effectiveness during the season.

For lawns, Sterling Garden and Lawn Fertilizer can be used to good advantage either alone, using 1000 pounds per acre, or in combination with sheep or manure, making it into a new form and feeding the second. But this Fertilizer is so concentrated that on old lawns it should never be used without the over of square measure of green grass and it is far from the danger of its burning the grass. See our Lawn Booklet for further information, sent free upon request.

For vegetables and flowers, free bearing can be encouraged by judicious use of Sterling Garden and Lawn Fertilizer. Apply early in Spring at the rate of 15 lbs. per 1000 square feet. For House Plants, a teaspoonful of Fertilizer dissolved and applied to the plant will give you astonishing results. Always water plants thoroughly after fertilization.

House Plants. A teaspoonful of Sterling Fertilizer dissolved in a quart of water and this solution poured around the roots of house plants will greatly invigorate them. Stir solution while pouring as to keep it well mixed, and add to the plant a little of the liquid every day—say every week or ten days, or until they are as healthy as you wish.

Per 5c, 50c, $1.25, $1.90, $5.175, $9.20, $9.95, 500 lbs., $12.50, 1000 lbs., $25.00.

Northrup, King & Co.'s Pure Raw Bone Meal.

Analysis: Nitrogen, 3.75 per cent; equal to Ammonia, 4.50 per cent; Phosphoric Acid (from bone), 22.00 per cent.

This is finely ground and of first quality; it starts to work immediately. Sown from a few months after it has been sown, it will grow as fast as most chemical fertilizers do it continues for a long period its improved value and fertility. It is less likely to other fertilizers to leach or waste. With bone there is no burning of the plants. It contains 23 per cent Phosphoric Acid, one of the principle elements in bone. Use 3 to 4 pounds of bone meal for each tree and vine when setting it out, working it in well around the roots. lawns. For lawns, use 500 lbs. of bone meal with a ton of sheep manure per acre. This should be distributed in several applications by sowing the seed. Old lawns, top dress very early in Spring with sheep manure and bone meal mixed, at the rate of 50 lbs. of bone per 1000 square feet.

Field and Garden Crops. 1 1/2 to 1 ton broadcasted and inclosed. This is especially desirable for use with sheep or cattle manure which is rich in nitrogen.

Permanent Pastures and Meadows. Use 1 1/2 to 1 ton per acre, before or after growth starts in the Spring. It is distributed the growth of the plants and result in improving the stand. Its effect will be apparent for several years.

Root of Grass Seed. The Necessity of Fertilizing.

This is similar to the Raw Bone Meal in analysis and fertility value, but it is a compound of phosphoric acid. It is applied in the way the Raw Bone Meal is and is often used in the fall at the rate of 300 to 400 lbs. per acre. If used in the Spring, use with cattle manure or sheep manure to form a complete fertilizer. The following formula is an estimate of the amount of phosphoric acid on a reasonable price.

Root of Grass. Price: 25 lbs., $1.35; 50 lbs., $2.55; ton, $40.00.

Steamed Bone Meal.

This is similar to the Raw Bone Meal and is easy to handle and when applied in the fall at the rate of 300 to 400 lbs. per acre. It is used in the Spring, applied with cattle manure or sheep manure to form a complete fertilizer. The following formula is an estimate of the amount of phosphoric acid on a reasonable price.

Steamed Bone Meal. Price: 25 lbs., $1.35; 50 lbs., $2.55; ton, $40.00.

Sheep Manure.

Analysis: Ammonia, 2.90 per cent; 1Phosphoric Acid, 1.50 per cent; Potash, 1.70 per cent.

This is a splendid, complete fertilizer containing the necessary plant foods and is also rich in humus, or vegetable matter. It is excellent for general purposes and for all other special purpose fertilizers. Having been kiln dried, there is little danger from weed seeds. It can be applied either alone, or in combination with any other fertilizer. A part of it is very soluble and its effects are usually apparent soon after the application and for a long time afterwards. It is carefully selected, dried, pulverized and screened.

For lawns, Potash and Phosphoric Acid is a fine fertilizer for the lawn. It should be applied by sprinkling lightly over the grass, much as one would sow wheat, just before or after planting and up to July 15th. It requires no marking in. The color is not conspicuous and there is no objectionable odor. 500 lbs. per 1 square mile is usually enough and can be used advantageously with other fertilizers.

For truck gardens. Manure is a fine fertilizer for the truck gardens. It should be applied by sprinkling lightly over the grass, much as one would sow wheat, just before or after planting and up to July 15th. It requires no marking in. The color is not conspicuous and there is no objectionable odor. 500 lbs. per 1 square mile is usually enough and can be used advantageously with other fertilizers.

For Public Parks. Sheep Manure is used on some of the best public parks in this country, including the beautiful park systems of Minneapolis.

For Truck Gardens. Sheep Manure, a good fertilizer for the truck gardens, producing better and earlier crops of onions, celery and other vegetables. Price, $1.75; 50 lbs., $1.00; 1000 lbs., $7.50. Delivered free within Minneapolis City limits in lots of 100 to 500 lbs.

Cattle Manure.

Analysis: Ammonia, 2.50 per cent; Phosphoric Acid, 1.50 per cent; Potash, 1.00 per cent.

A high grade natural fertilizer for general use, air dried and prepared so that most of its soil enriching properties are lost. It is especially desirable for making new lawns as it not only contains the essential plant foods but, in addition, provides a large amount of humus or vegetable matter. Thus it enriches the soil and improves its physical texture, tending to make heavy soil mellow and increase the water holding capacity of the soil. There is no danger of using too much cattle manure as long as it is well distributed through the soil and does not come into direct contact with the roots.

Use 500 to 1000 lbs. of cattle manure per acre or 12 to 15 lbs. per 1000 square feet, depending on conditions. Apply early in the Spring on your sandy or warm out soil. Bag, 15c; 5 bags, $1.00; 25 bags, $1.25; 50 lbs., $2.75; ton, $55.00.

N., K. & Co.'s Sterling Fertilizer No. 1.

For Market Gardeners and Truckers.

Analysis: Ammonia, 4 per cent; available Phosphoric Acid, 10 per cent; Potash, 5 per cent.

CONSISTS principally of bone, blood and potash. The best for all garden crops, invaluable for other professional truckers, private or market gardeners. It is made of dissolved bone manure, nitrate of soda, dried blood, with potash in the form of sulphate added. It is easily applied either before or after planting, by sprinkling the surface, or in thin layers in the rows.

Use 500 to 1000 lbs. of cattle manure per acre or 12 to 15 lbs. per 1000 square feet, depending on conditions. Apply early in the Spring on your sandy or warm out soil. Bag, 15c; 5 bags, $1.00; 25 bags, $1.25; 50 lbs., $2.75; ton, $55.00.

N., K. & Co.'s Sterling Fertilizer No. 2.

For Onions, Potatoes & Other General Fruit and Root Crops.

Analysis: Ammonia, 3 per cent; available Phosphoric Acid, 10 per cent; Potash, 3 per cent.

This fertilizer is especially adapted for the crops mentioned, having plenty of potash and enough nitrogen to bring up. We advise not less than 400 lbs. per acre, for the best results. When sown early or on green clover, it is especially adapted for the crops mentioned, having plenty of potash and enough nitrogen to bring up. We advise not less than 400 lbs. per acre, for the best results. When sown early or on green clover, it is especially adapted for the crops mentioned, having plenty of potash and enough nitrogen to bring up. We advise not less than 400 lbs. per acre, for the best results.

Price, 100-lb. bag, $5.00; ton, $55.00.

N., K. & Co.’s Sterling Fertilizer No. 3.

For Seed Corn.

Analysis: Ammonia, 3 per cent; available Phosphoric Acid, 9 per cent; Potash, 1 per cent.

Seed corn is one of the most important crops of the North. It is a question of doubt if anything will show a larger increase than the corn crop. This special brand will produce results that will surprise you. Use 500 to 1000 lbs. per acre. Price, 100-lb. bag, $5.00; ton, $57.50.

N., K. & Co.’s Sterling Fertilizer No. 4.

For General Farm Crops.

Analysis: Ammonia, 3 per cent; available Phosphoric Acid, 9 per cent; Potash, 1 per cent.

A blend of these two fertilizers and the special one described above, making it suitable for all soil, farm, and grass crops. Price, 100-lb. bag, $4.00; 200-lb., $4.50; ton, $72.00.
ANIMAL and CHEMICAL FERTILIZERS.

Elements of Fertility
Nitrogen. Its first function is to produce the green rank growth of the plant, and for this purpose it is needed in larger quantity than the other elements of fertility. Plants especially need nitrogen in the beginning of their growth, and the lack of it will cause stunted growth. In the soil, nitrogen exists partly in organic combination and partly in nitrate, and the latter is readily available for plant assimilation. It is obtained from the air by leguminous plants such as clover and beans, which can fix the nitrogen of the air and convert it into a usable form. Nitrogen is also obtained from decaying organic matter. Nitrogen is the most important element in the production of plants, and when this has been exhausted from the soil, it must be replaced by nitrogenous fertilizers, under the form of urea, nitrate, or other similar compounds.

Phosphoric Acid: The young plant is very weak if it is not provided with a sufficient quantity of this element. Phosphorus is needed by the plant in chemical combination, and forces it to absorb other necessary elements of fertility. If there is a deficiency of phosphorus, the plant is transferred to the soil which, consumed by animals, forms the bone of the body.

Potash: Its chief function is to form the cellular fibres, straw and woody growth of plants. It aids in producing sap, starch formation of grains, and juices and sweetening of fruits. It has served these functions in the plant, resulting in the return of the plant's excreta, chiefly needed in forming the seed without which fruit would not be produced. Potash applied to the ground can be utilized by the plant.

Nitrate of Soda: Quick in action and one of the most valuable fertilizers for vegetables and crops. It is used for vegetables and fruits, and should be applied when the plants are of medium size. It promotes the formation of new leaves and stems, and improves the texture of the soil. It is generally used for vegetables, fruits, and flowers. It can be applied at the rate of 200 lbs. per acre as a broadcast application, and 100 lbs. per acre as a band application.

Suggestive. Swift's Fertilizers

Swift's Salt Grown Blood

Guaranteed Analysis
Nitrogen, 1.15 per cent Equal to Ammonia, 2.25 lb. per ton
Phosphoric Acid, available, 10.00 per cent
Potash, K2O actual, 2.00 per cent
This brand of fertilizer is recommended for fertility of the soil. For all crops, particularly Corn, Wheat, Oats, Rye, Barley, and Potatoes.

Swift's Special Grain Grower

Guaranteed Analysis
Ammonia, 1.50 per cent Equal to Ammonia, 1.50 lb. per ton
This brand of fertilizer is recommended for Corn, Oats, Barley, and Rye. The phosphatic and potassic elements are highly available, with just enough ammonia to add to the balance of nitrogen. Apply 250 lbs. per acre. For all crops, particularly Corn, Oats, Barley, and Rye.

Swift's Special Wheat Grower

Guaranteed Analysis
Ammonia, 1.00 per cent Equal to Ammonia, 1.00 lb. per ton
Phosphoric Acid, available, 15.00 per cent
Potash, K2O actual, 5.00 per cent
This brand of fertilizer is recommended for the average Northwest soil. Apply 250 lbs. per acre. For all crops, particularly Corn, Oats, Barley, and Rye.

Swift's Vegetable and Beet Grower

Guaranteed Analysis
Ammonia, 16.00 per cent Equal to Ammonia, 16.00 lb. per ton
Phosphoric Acid, available, 25.00 per cent
Potash, K2O actual, 10.00 per cent
This brand of fertilizer is recommended for the average Northwest soil. Apply 250 lbs. per acre. For all crops, particularly Corn, Oats, Barley, and Rye.

Swift's Fertilizers are crop producers. They contain animal matter, natural plant food, properly processed and combined to make a complete plant food. Swift's Fertilizers become available as needed, to promote early growth, nourish the crop seed to maturity and ripeness. We are not satisfying to buy fertilizers of unknown quality. Swift's Fertilizers have been in use for over 100 years and have demonstrated their superiority over other brands.

Swift's Champion Wheat and Corn Grower

Guaranteed Analysis
Nitrogen, 1.65 per cent Equal to Ammonia, 1.65 lb. per ton
Phosphoric Acid, available, 12.00 per cent
Potash, K2O actual, 4.00 per cent
This brand of fertilizer is recommended for the average Northwest soil. Apply 250 lbs. per acre. For all crops, particularly Corn, Oats, Barley, and Rye.

Swift's Unleached Hard Wood Ashes.

Canada Unleached Hard Wood Ashes. Highly recommended by growers for corn and field crops. Improves the texture of the soil and is indigested by roots, requiring potash. Drives away insects. Price, 190 lbs. $1.25; 250 lbs. $2.25; ton, $20.00.

Sterlingworth Plant Tablets

Sterlingworth Plant Tablets. A clean, odorless, concentrated plant stimulant. Formulated tablets, with the finest and most effective of fertilizers, plus vitamins, for garden and lawn. For all vegetables and plants, they are immediately available in water and available to plant life from the moment of application. Two size packages, directions for use on each. Small size, 15c; (slot without 8 oz.); large, 25c; (mailing weight 15 oz.).

Gypsum or Land Plaster

Gypsum or Land Plaster. Excellent for mixing with fresh manure to "fix" the nitrogen, 100 lbs. $1.00 ton; 17.00.

Swift's Ground Dried Blood

Guaranteed Analysis
Nitrogen, 13.18 per cent Equal to Ammonia, 1.60 per cent
Where a highly concentrated Ammoniate is required, Swift's Ground Dried Blood is the best and surest. The Tons of less (from leaching as there is from Nitrate of Soda and Sulphates) of ammonia, it is quickly available without any reaction. This is the ideal fertilizer for florists and greenhouse culture, for flowers and early market vegetables and for conservatories. 2 lbs. 100 per 100 square feet, or half pound per square yard of surface. Spread evenly and timely applied with surface soil.

Swift's High Grade Phosphate

Guaranteed Analysis
Phosphoric Acid, available, 10.00 per cent
Potash, K2O actual, 6.00 per cent
This brand of fertilizer is recommended for fertility of the soil. For all crops, particularly Corn, Oats, Barley, and Rye.

Swift's High Grade Phosphate and Potash.

Guaranteed Analysis
Phosphoric Acid, available, 10.00 per cent
Potash, K2O actual, 6.00 per cent
This brand of fertilizer is recommended for fertility of the soil. For all crops, particularly Corn, Oats, Barley, and Rye.

Swift's Fertilizer was applied at the rate of 300 pounds per acre and applied to the soil with a Vorinunt Shoe Drill.
Sterling Poultry Feeds.

Our Sterling Poultry Feeds are economical to use because they contain only the correct and needed proportions of corn, cracked corn, and other feeds which are needed in the proper proportions to make balanced rations for your birds every day.

They will help your baby chicks grow rapidly, develop strong constitutions and run out into splendid pullets and cockerels.

For full growth you must supply feed which will not only nourish their bodies but also enable them to lay eggs. Corn alone makes fat, but very few eggs. Use Sterling Poultry Feeds for the "full egg-basket."

We are now selling over 2000 tons of these feeds annually. For reliable advertisements of our Sterling Poultry Feeds are used at the great Minneapolis Poultry Show where so many of the most valuable birds in the country are exhibited. We maintain our standard of quality regardless of market changes in price of grain. See our Red Figure Price List for latest quotations.

Peep o' Day Chick Meal.
The ideal food for baby chicks. A scientifically balanced ration to nourish chicks properly. It contains the proper ingredients to make bone, muscle, and good red blood. Should be fed the first three weeks in combination with Sterling Baby Chick Starter. This may be fed wet or dry but dry feeding is recommended.

Feeding directions on each package:
3-lb. sack, 30c.; 10-lb. sack, 50c.; 50-lb. sack, $2.75; 100-lb. sack, $7.50.

Sterling Baby Chick Starter.
(Sold only in sealed bags.) To be fed the first three weeks.
A wholesome, ready prepared, starting food which will nourish the chicks so they can make rapid growth. Contains the necessary materials to form bone and feathers. Start feeding this when they are 3 hours old, give plenty of water and occasionally lettuce, or other tender greens. For the first few days be fed every few hours, just what they will eat up clean each time. Be careful not to overfeed. If chicks are a few days of age feed them other clean litter so the baby birds will have to scratch for it. Avoid letting the chicks become chilled or overfed.

Sterling Baby Chick Starter is what your chicks need to bring them through the most critical period of their life. Get them started right. 5-lb. sack, 20c; 10-lb. sack, 35c; 50-lb. sack, $2.35; 100-lb. sack, $7.00.

Sterling Chick Feed.
(Sold only in sealed bags.) For chicks three weeks old and older. Also a mixture of feed for all other poultry.
A whole feed for all birds.
Sterling Chick Feed contains the essential ingredients of the mash feeds used at the Australian Egg Laying Competition. It corresponds closely to the mash recommended by the many state experiment stations but contains greater variety than most of the others.

Use Sterling Chick Feed, clean utensils and see that brooding conditions are right. Provide some shade in the suns during warm weather, and give plenty of tender greens. If milk is used always feed it sweet or sour, but do not keep milk more than 24 hours. Use our buttonmilk for feed.

Get them started right. 5-lb. sack, 20c; 10-lb. sack, 35c; 50-lb. sack, $2.35; 100-lb. sack, $7.00.

Sterling Hen Feed.
(Sold only in sealed bags.) For hens. A splendid, well balanced feed, containing several kinds of grain, and oil meal. This feed supplies the variety which hens need, since they always do better on a mixture of grains than on one kind. Hens will gain in weight and lay and the protein in it promotes the health and fertility of hens. It contains plenty of organic ash, which builds up bone. Feeding directions will be found in every sack.

5-lb. sack, 20c; 10-lb. sack, 35c; 50-lb. sack, 55c; 100-lb. sack, $3.00.

Sterling Hen Feed without grit. 100-lb. sack, $1.80.

Sterling Scratch Feed.
(Sold only in sealed bags.) For improving of grains and seeds, oil meal, etc. Each item is included in the proper proportion to make a well balanced feed.

This mixture is a trifle lower in protein than our Sterling Hen Feed but contains more kinds of grain. Where the poultry is already on mash feed it would be well for him to use both the Sterling Hen and Sterling Scratch Feeds for the sake of variety, etc. Superb meal for all kinds of poultry—man with whom this grain feed, either Sterling Hen or Sterling Scratch Feed would be satisfactory to use.

For winter, use 2 parts of this feed for 1 part of chick. Packed in 100 lbs. bags only, each $1.80.

Sterling Scratch Feed without grit. 100-lb. sack, $1.80.

All Grain or Star Hen Feed.
A first class, pure grain mixture containing no shell, grit, or bone. This will be found a splendid feed to use in combinations with table scraps, fresh ground corn or some other feed, rich in animal protein. The fowls should also have plenty of grit and shell. 100-lb. sack, $1.85.

Mixed Feed for Poultry.
To those who want a genuinely good mixture of grains and seeds, that is properly proportioned to make an economical poultry feed, this special mixture is recommended. The事实 that we have sold many car-loads in the last few months to customers who have bought this mixture before, is sufficient evidence of its popularity. As a low priced grain feed, it cannot be equalled in quality anywhere at the price we ask for it. 100-lb. sack, $1.75.

Northrup, King & Co.'s Sterling Poultry Feeds.
Sterling Egg Starter.
A fine tonic and conditioner for moulting hens. Birds just through moulting or those that are to be kept perfectly uniform by being kept in the same warm house should receive this tonic. Directions on the package suggest how to use it for best results. If you have hens too fat they will not lay, even if you give them a tonic. Such birds should receive less corn, more meat and be compelled to work for all the food they get. Then, feeding them Egg Starter will help them to get into condition. Prices 2-lb. carton 25c; 5-lb. carton, 50c; 25-lb. sack $1.25.

Sterling Granulated Bone.
Made from fresh, green bones, which have the moisture, grease, etc., extracted from them, leaving nothing but phosphates of lime and protein. Will keep in any kind of weather if kept dry. This bone is prepared especially for our trade.

Sterling Meat Scraps.
Meat scraps are rich in protein, the material which makes muscle and lean meat. Container 50 per cent protein. Will keep in any climate under all conditions. We guarantee our Meat Scraps to be pure and free from any adulteration. They are manufactured especially for us and are fully up to the high quality of our Sterling Brand.

Blood Meal.
Very rich in protein, usually containing about 40 per cent. This is of great value for increasing the protein in ground grain mixes. 10 lbs. 30c; 25 lbs. 75c; 50 lbs. $1.55; 100 lbs. $2.45.

Oil Meal.
Aids digestion and assimilation of food. As it contains 23% of protein, it is combined with grains and other feeds so as to make a complete ration. Improves the beans’ vitality and appearance of poultry. Comes in two sizes. State whether you wish fine or pea size. 10 lbs. 25c; 20 lbs. $0.50; 50 lbs. $1.30; 100 lbs. $2.60.

Kaffir Corn.
A very valuable food for pigeons, etc., its nutritive value is about the same as corn. It is especially desirable for feeding baby chicks. Bags contain about 150 lbs. 16 lbs. 25c; 100 lbs. $1.55.

Unmixed Grains.
Prices named are those in effect when issuing this catalogue. Subject to market changes.

Above prices are F. O. B. Minneapolis, if wanted by mail add postage at parcel post rates.

For large quantities of any of these seeds, write for special quotations. All prices subject to market changes.

Blatchford’s Calf Meal.
This is a concentrated, dry substitute for milk which is being successfully used all over the country by dairy farmers and others who believe that milk is too valuable to feed to calves. This calf meal or milk-equal, when mixed with skim milk or water to the proper consistency is very similar to milk and contains all the elements of milk-protein, fat, and fiber, moisture and ash in the same proportions. Every pound makes a gallon of milk, wholesome milk equal.

- Hemp 25 lbs. $1.50; lb. in 100 lbs. $1.25.
- Sunflower, Fancy | $5.65 |
- Sunflower, Mixed | $2.65 |
- Cracked Wrinkled Peas | $2.55 |
- Broom Corn or Hog Mill | $2.75 |
- Pork Feed, First Grade | $2.85 |
- Yellow and Green Mixed | 7.05 |

Cotton Seed Meal.
Not recommended for calves or pigs but is very useful for feeding dairy cows as it is very rich in protein, containing 38.0 per cent, and may be combined with other grains to form the grain ration. 100 lbs. bag, $2.20.

Discounts on Quantity Orders.
On orders for our mixed poultry feeds, including Sterling Baby Chick Starter, Sterling Chick Feed, Sterling Mixed Ration, Agra Hen or Chick Mix. Mixed Feed for Poultry, Sterling Pigeon Feed, and Sterling Mash, amounting to 100 lbs. we will allow 5c per 100 lbs. discount from single bag prices. If your order amounts to 2000 lbs. we will allow you 10c per 100 lbs. discount. In case of many orders you are entitled to these discounts if your order for these feeds is one kind or a combination of the kinds named above. This special discount does not apply to oyster shells, grit or other items not specifically named in the list above.
Alfalfa Meal. Made from new crop, pea green, kiln-dried Alfalfa hay. This is more valuable than clover meal and is highly recommended. Greatly improved success is cabled. It contains a large per cent of protein and furnishes green feed in Winter when this form is in short supply and in the spring when it is scarce - with little or no fill and can be mixed in with dry feeds and cooked and fed mixed with hay or water. Price, 100 lbs., $1.75; 50 lbs., $1.00; 25 lbs., 50c.

Charcoal. Have it constantly before them. Nothing takes the place of charcoal in this respect, as it purifies the blood, aids digestion and tones up the system. Never add antimony or any other substance to your fowls or give them an occasional feed of charcoal. Two sizes, fine and coarse. 2 lbs., 50c; 10 lbs., $1.00.

Sterling Crushed Oyster Shell. Hens must have lime in some form to furnish egg shell material. If you are having trouble with your fowls laying soft-shelled eggs you should start feeding Oyster Shell immediately to remedy this condition. Crushed Oyster Shell for hens, 100 lbs., $1.00; 150 lbs., $1.40; 200 lbs., $1.80; 250 lbs., $2.20; 300 lbs., $2.50; 400 lbs., $3.25; 500 lbs., $3.75.

Northrup, King & Co.'s Mica Crystal Grit. Poultry, having no teeth should be kept constantly supplied with grit to grind their food. Mica Crystal Grit is not only sharp and hard, but is particularly adapted for poultry. It is composed of mica in its natural state which is highly desirable for the health and productive power of the fowl. Grit is just as necessary to newly hatched chicks as to older poultry as without it they cannot grind food. We have been able to provide this grit in small size, 10 lbs., $1.20; 50 lbs., 45c; 100 lbs., 6o.

Pearl Grit. Essential food dressing and necessary for the proper nutrition of food and production of eggs. It is white in color and contains no dirt, causing no inconvenience. We supply it for two sizes, coarse or coarse, when ordering, Price, 10 lbs., 15c; 50 lbs., 45c; 100 lbs., 6o.

Cry's-Co. A grit and shell producer combined. It is composed of micas and shell, crushed to the proper sizes for hens, 100 lbs., 65c per 100 lbs.

French's Poultry Mustard. F. O. B. Minneapolis.

Northrup, King & Co.'s Crushed Oyster Shells for Poultry.

Conkey's Poultry Remedies and Insecticides.

Conkey's Poultry Remedies.

Poultry cannot be profitable unless they are in a healthy condition. We offer a special remedy for sick fowls. The importance of prevention by the use of a germicide, like Nox-o-cide, should not be underestimated. This is a special remedy, Conkey's Roup Remedy. For fowls that sneeze, gasp and wheeze, also those that have a watery discharge from the eyes and other symptoms. Directions on pan, pail and cask will be effective. Three sizes, 25c, 50c and $1.00.

Conkey's Cholera Remedy. Placed in drinking water. Directions on every box. Two sizes, 25c and 50c, postpaid.

Conkey's Lice Powder. Will successfully kill lice on fowls. 5 oz. package, 15c; 1 lb., 25c; job, 40c;½ lb., postpaid. Conkey's Lice Liquid. Will kill mites and acts as a disinfectant. Applied to walls, roofs and crevices with a brush or sprayer. Qt., 50c; gal., $1.00.

Conkey's Poultry Conditioner. For fowls run down, off feed, recovering from disease or during molting season. Will stimulate appetite and aid recovery. 5 lbs., 10 cents, postpaid, 30 lbs., $1.25.

Conkey's Poultry Laxative. Price, 25c, postpaid.

Conkey's Cheek Paste. Price, 50c, postpaid.

Conkey's Liniment. Price, 50c, postpaid.

Conkey's Black Head Remedy. Price, 50c, postpaid.

Conkey's White Diphtheria Remedy. Price, 50c, postpaid.

Conkey's Fly Killer. Price, 25c, ½ gal., 60c, full gallon, $1.50.

Conkey's Scaly Leg Remedy. Price, 50c, postpaid.

Conkey's Gape Remedy. Price, 50c, postpaid.

Conkey's Headache Remedy. Price, 50c, postpaid.

Conkey's Headache Ointment. Price, 1 oz., 10c; 3 oz., 25c; 5 oz., 50c, postpaid.

Germozone. A plant, etc. A little, twice a week in the drinking water, will keep crop, stomach and intestines soft. In young fowls, in early stages, can be given in these applications. This germicide, which is a powerful disinfectant and germicide. Fine for many purposes—cleaning incubators and breeders, washing fowls and equipment. Prices: 5c, qt; 10c, gal; 25c, gal.

N. W. Fountain and Feeder.

Feeders, water, grain, grit, etc., automatically filled and operated, easily cleaned. Pan is released by lifting trigger. Very sanitary and easy to clean. Will fill any size Mason jars. No feed furnished. Pack is constructed of heavy iron with a deafening coating and suitable for hen太太 and not rust or corrode. These pans will outlast several tin or galvanized pans, besides costing nothing. 5 inch pan, each, 10c; No. 6, 6 inch pan, each, 25c. If by mail, add 2c per package.

Keeping Poultry Healthy.

Some say the best medicine for a sick chicken is the axe. This is sometimes true, but if it is a case of cold, whole flock being sick it is not likely that any preventive measures are best.

In the Summer the birds should have a shady yard where they can find plenty of shade. If the poulty house is hot it should be divided so that a crop can be grown in one part while the birds are eating a green crop in the other. Wheat and other green crops for this purpose. Alfalfa is splendid as it is a high protein food in addition to its tonic properties. Alfalfa should be grown. It will prevent the fowls from injuring the plant and the young shoots will grow up through the wires.

For shading the yard, Sunflowers are the best annual plant, while plum trees are best for permanent planting. Keep the poulty house dry and free from water. Use a dry and free water. Give the fowls a little salt water mixed with succulent food all Winter—Cabbage, roots, or Alfalfa. The birds should have their own shell and charcoal and no stone should be kept constantly before them.

At the first symptom of illness isolate the sick bird so as to prevent spreading it. This will damage the flock. When isolated there are thoroughly with Noxoid. It always pays to keep Conkey's Roup, Cholera and Lice Powder and other remedies on hand. For the trouble, quick treatment is most important.

Conkey's Poultry Book containing useful and complete directions to accompany every package. Conkey's Poultry Book containing much valuable information will be sent free upon request.

Booklet on "Poultry Profits," containing information of value about the raising and care of poultry, sent without charge with orders, if requested.
Duplex Poultry Marker. Punch is reversible and cuts two sizes as shown, giving practically two tools for the price of one. Handle is safety nickel-plated and polished, and the marker completes weights 1/2 ounce. Price, 25c each, postpaid.

Philadelphia Poultry Marker.

It is very important to keep a careful record of the different hatches of chicks and no better way has been devised than by the use of this little machine. Over 900 different marks can be made each day by punching between different toes. It is made in two sizes, one for chicks and one for adult by 1/2. The sizes are shown by the black dots at the side of the illustration. Price, each, postpaid, 25c. State which size is to be wanted.

Poultry Punch. Made on the plan of a ticket punch. It makes a sharp, clean cut, thus avoiding injuring or tearing the web. It is so constructed that it cannot pitch or boil. Very strong and durable. The most convenient and serviceable punch on the market. Each, 40c, postpaid.

Leader Adjustable Leg Bands. Latest and best adjustable leg band out. Its newest, most compact and smoothest fastening of any band on the market. Easily attached. The Band is made of heavy galvanized iron, has a hinged lid and being made of metal affords freedom from dampness and mold. For drying both hard grain mixtures and dry mash, this hopper is divided into two compartments, each holding about 1/4 bushel of feed, the mash being thoroughly mixed by a perforated paddle, supported by flat steel plates. A. A. Bantams and all small breeds are kept in the upper compartment and larger poultry in the lower one. A smooth, hand-operated door is provided for easy access.

Diamond Egg Carrier. The Diamond Egg Carrier is entirely new and in a class by itself. It is shipped flat, thereby saving a large amount on freight and express. The peculiar construction of the box, a V-shaped webbing permits its being made of very light material while still retaining great strength. It is easily set up. A child can put them together and pack the eggs. They can be packed on a moment's notice. The eggs do not come in contact with the outside of the box at all, having a cushion on all sides, and being wrapped in tissue paper, there is no jar, thus insuring safe transportation. Owing to their light construction, you can ship by express anywhere in the United States at the maximum charge.

Diamond Egg Carrier. Saves Money in Cost, Time, Safety, Space, Weight, Express.

Excelsior Drinking Fountain. It is highly important that poultry be given plenty of pure drinking water and that it be kept in clean containers. Drinking disease will contaminate the rest of the flock unless the water is kept sanitary. The Excelsior Fountain is made of heavy galvanized iron, is easily cleaned and cheap. Made in sizes, flat or conical top. Price, quart, 25c; 1/2 gallon, 35c; gallon, 50c; 2 gallons, 75c. A small hopper can be attached to this fountain at an extra cost of 25c.

Automatic Drinking Fountain. Made to fit any size Mason jar. Can be set anywhere, on floor, pigeon loft, in brooder or fastened to wall. It will not turn over and chicks cannot drown in it. Easily cleaned. Aluminum, cannot rust or crack. Jar not furnished. Each, 25c, postpaid, 30c.

Combination Food and Water Fountain. Made of steel and porcelain. The bowl is divided into two compartments, one for feed and one for water. Feeds either water or grain, grit, oil seeds, etc., and with the glass receptacle you can always see at a glance the amount of food or water left in the fountain. They are easily cleaned and filled and any ordinary bottle or jar can be used with them. No bottles or cans are included with fountains. Price, each, only 25c each. Mailing weight, 1 lb.

Excelsior Dry Feed Hopper. Dry feed has become such a part of modern poultry keeping that no layer should be without one. Excelsior Dry Feed Hopper is made of heavy galvanized iron. It has three compartments, and may be used for feeding grit, oil shell and charcoal, or grit, shell and granulated bone. It feeds more evenly and prevents wastage. The top of hopper is hinged up on the side of the cabinet, the handle can be held in position by any one. The bottom of the hopper is chipped, or the other for grain or beer. Each, 30c; doz., 275c. If by mail add 2c extra for postage on each.

Hygeia Nest Egg. This egg is almost an exact imitation of a hen's egg, but contains a powerful disinfectant which will expel lice and vermin. Much of the disease among poultry is caused by lice. Hens will not lay when troubled by lice and to improve our profits and relieve you from these pests, Price, each, 3c; doz., 25c. If by mail add 2c extra for postage on each.

Opal Nest Egg. Made of lime and covered with paraffine. Does not break, will look like hen's eggs. Practically unbreakable and do not get cold in Winter like other nest eggs. Each, 5c; doz., 39c. If by mail send 2c extra for postage on each.

Sterlingworth Sulphur Candles. In flat tin boxes, each one having a large, round wick in the center, which stays lighted until every particle of sulphur is consumed. It permits its being set in a dish of water and as the tin is heated by the burning sulphur, the water is kept clean. For a system which will keep sulphur candles far more deadly than the ordinary sulphur would be. The candle is burned in brooders to keep the air free of the disease, thus killing the smallest germ. This candle will thoroughly fumigate a room 12 by 15 feet. By express or freight each, 12c. Mailing weight, 7oz.

Mann's Bone Cutter. Fresh ground bones are very valuable for feeding laying hens and will increase the egg production to a remarkable degree. Every keeper of poultry should have a bone cutter of his own. Mann's Bone Cutter has been on the market for several years and is without question the best manufactured. The new model No. 7 Cutter is an improvement over other patterns, having a double hopper which permits it being set in a dish of water and as the tin is heated by the burning sulphur, the water is kept clean.

Wire Nests. These nests are strongly made from heavy Japanese steel wire and will last a lifetime. They are far superior to boxes, will not harbor lice and are always clean. Each, 15c; doz., $1.50.

Stone Drinking Fountain. These require little description. They are strong and made so that they cannot be turned. They are easily filled and kept in sanitary condition. Prices, 1/4 gallon, 25c; gallon, 45c; 3 gallon, 45c; 5 gallon, 45c. Less ordered with other goods add 10c each for packing charges.
GIANT FODDER CORN excels all other varieties in yield per acre. Slender stalks and an abundance of leaves makes this an enormous yielder of valuable forage. See page 138 for complete description.

ELEPHANT FODDER CORN. King of Medium Dent varieties. Grows tall is extra leafy and forms good sized ears freely, even in Northern latitudes. It is unsurpassed in feeding value. Full description and prices on page 139.
